Approximate date of commencement of proposed sale to the public: As soon as practicable after this Registration Statement becomes effective.

If the only securities being registered on this Form are being offered pursuant to dividend or interest reinvestment plans, please check the following box.

If any of the securities being registered on this Form are to be offered on a delayed or continuous basis pursuant to Rule 415 under the Securities Act of 1933, other than securities offered only in connection with dividend or interest reinvestment plans, check the following box.

If this Form is filed to register additional securities for an offering pursuant to Rule 462(b) under the Securities Act, please check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering.

If this Form is a post-effective amendment filed pursuant to Rule 462(c) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering.

If this Form is a registration statement pursuant to General Instruction I.D. or a post-effective amendment thereto that shall become effective upon filing with the Commission pursuant to Rule 462(e) under the Securities Act, check the following box.

If this Form is a post-effective amendment to a registration statement filed pursuant to General Instruction I.D. filed to register additional securities or additional classes of securities pursuant to Rule 413(b) under the Securities Act, check the following box.

If this form is a post-effective amendment filed pursuant to Rule 462(d) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering.

CALCULATION OF REGISTRATION FEE

Title of Each Class of Securities to be Registered	Proposed Maximum Aggregate Offering Price(1)(2)	Amount of Registration Fee(3)
Units of Beneficial Interest in Whiting USA Trust I	\$195,000,000	\$5,986.50

(1) Includes trust units to be sold upon exercise of the underwriters' over-allotment option.

(2) Estimated solely for the purpose of calculating the registration fee pursuant to Rule 457(o).

(3) Pursuant to Rule 457(p), the \$5,986.50 filing fee is offset by \$372.12 of the registration fee that was paid on June 28, 2007 pursuant to Rule 456(b), but unused, in connection with Whiting Petroleum Corporation's Registration Statement No. 333-133889, which was filed on May 8, 2006, and \$5,614.38 of the registration fee

that was paid, but unused in connection with Whiting Petroleum Corporation's Registration Statement No. 333-128398, which was filed on September 19, 2005.

The co-registrants hereby amend this registration statement on such date or dates as may be necessary to delay its effective date until the co-registrants shall file a further amendment which specifically states that this registration statement shall thereafter become effective in accordance with Section 8(a) of the Securities Act of 1933 or until the registration statement shall become effective on such date as the Securities and Exchange Commission, acting pursuant to said Section 8(a), may determine.

Table of Contents

The information in this preliminary prospectus is not complete and may be changed. We may not sell these securities until the registration statement filed with the Securities and Exchange Commission is effective. This preliminary prospectus is not an offer to sell these securities and it is not soliciting an offer to buy these securities in any state where the offer or sale is not permitted.

Subject to Completion dated November 20, 2007

PRELIMINARY PROSPECTUS

Whiting USA Trust I

Trust Units

This is an initial public offering of units of beneficial interest in the Whiting USA Trust I. Whiting Petroleum Corporation, which we refer to as Whiting in this prospectus, has formed the trust and, immediately prior to the closing of this offering, Whiting will contribute a term net profits interest in oil and natural gas properties to the trust in exchange for trust units. The net profits interest will entitle the trust to receive 90% of the net proceeds from the sale of production of 9.04 MMBOE (which is equivalent to 8.14 MMBOE attributable to the net profits interest) of proved reserves, after which the trust will terminate. Whiting is offering all of the trust units to be sold in this offering and will receive all proceeds from the offering. Whiting is an independent oil and gas company engaged in acquisition, development, exploitation, production and exploration activities. Whiting's common stock is traded on the New York Stock Exchange under the symbol WLL.

There is no current public market for the trust units. Whiting expects that the public offering price will be between \$ and \$. The trust intends to apply to have the trust units approved for listing on the New York Stock Exchange under the symbol WHX.

Trust units are units of beneficial interest in the trust and represent undivided interests in the trust. They do not represent any interest in Whiting.

Investing in the trust units involves a high degree of risk. Before buying any trust units, you should read the discussion of material risks of investing in the trust units in Risk Factors beginning on page 18 of this prospectus.

These risks include the following:

The amounts of cash distributions by the trust are subject to fluctuation as a result of changes in oil, natural gas and natural gas liquid prices.

Actual reserves and future production may be less than current estimates, which could reduce cash distributions by the trust and the value of the trust units.

Risks associated with the production, gathering, transportation and sale of oil, natural gas and natural gas liquids could adversely affect cash distributions by the trust.

The trust and the trust unitholders will have no voting or managerial rights with respect to the underlying properties. As a result, trust unitholders will have no ability to influence the operation of the underlying

properties.

The reserves attributable to the underlying properties are depleting assets and production from those reserves will diminish over time. The trust is precluded from acquiring other oil and natural gas properties or net profits interests to replace the depleting assets and production.

The amount of cash available for distribution by the trust will be reduced by the amount of any royalties, lease operating expenses, production and property taxes, maintenance expenses, postproduction costs and producing overhead, and payments made with respect to hedge contracts.

There has been no public market for the trust units and no independent appraisal of the value of the net profits interest has been performed.

Conflicts of interest could arise between Whiting and the trust unitholders.

Trust unitholders have limited ability to enforce provisions of the net profits interest.

The trust has not obtained a ruling from the IRS regarding the tax treatment of ownership of the trust units. If the IRS were to determine that the trust is not a grantor trust for federal income tax purposes, the trust unitholders may receive different and less advantageous tax treatment than that described in this prospectus.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or passed upon the adequacy or accuracy of this prospectus. Any representation to the contrary is a criminal offense.

	Per Trust Unit	Total
Initial public offering price	\$	\$
Underwriting discounts and commissions(1)	\$	\$
Proceeds, before expenses, to Whiting(1)	\$	\$
(1) Excludes a structuring fee of \$ payable to Raymond James & Associates, Inc. for evaluation, analysis and structuring of the trust.		

The underwriters may also exercise their option to purchase from Whiting up to additional trust units to cover over-allotments, if any, at the initial public offering price, less the underwriting discounts and commissions, within 30 days of the date of this prospectus.

The underwriters are offering the trust units as set forth under Underwriting. Delivery of the trust units will be made on or about , 2008.

RAYMOND JAMES

The date of this prospectus is , 2008

PROSPECTUS SUMMARY

*This summary highlights information contained elsewhere in this prospectus. To understand this offering fully, you should read the entire prospectus carefully, including the risk factors and the financial statements and notes to those statements. You will find definitions for terms relating to the oil and natural gas business in *Glossary of Certain Oil and Natural Gas Terms*. Cawley, Gillespie & Associates, Inc., an independent engineering firm, provided the estimates of proved oil and natural gas reserves for the underlying properties described in this prospectus, in a reserve report as of September 30, 2007, which is referred to in this prospectus as the *reserve report*. A summary of the reserve report is located at the back of this prospectus as Appendix A. References to *Whiting* in this prospectus include Whiting Petroleum Corporation and its wholly-owned subsidiaries, Whiting Oil and Gas Corporation and Equity Oil Company. Unless otherwise indicated, all information in this prospectus assumes no exercise of the underwriters' option to purchase additional trust units.*

Whiting USA Trust I was formed in October 2007, by Whiting Petroleum Corporation. Immediately prior to the closing of this offering, Whiting Petroleum Corporation's wholly-owned subsidiaries, Whiting Oil and Gas Corporation and Equity Oil Company, will convey a term net profits interest to the trust that represents the right to receive 90% of the net proceeds (calculated as described below) from Whiting's interests in certain existing oil and natural gas producing properties after the effective date of the conveyance of the net profits interest to the trust, which we refer to as the *net profits interest*. The net profits interest will entitle the trust to receive 90% of the net proceeds from the sale of production of 9.04 MMBOE (which is equivalent to 8.14 MMBOE attributable to the net profits interest) of proved reserves, after which the trust will terminate. These producing properties are located primarily in the Rocky Mountains, Mid-Continent, Permian Basin and Gulf Coast regions of the United States. We refer to Whiting's net interests in such producing properties, after deduction of all royalties and other burdens on production thereon existing as of the date of the conveyance of the net profits interest to the trust, as the *underlying properties*.

The underlying properties include interests in approximately 3,000 producing wells located in 173 fields in 14 states. As of September 30, 2007, the total proved reserves attributable to the underlying properties, as estimated in the reserve report, were 13.18 MMBOE with a pre-tax PV10% value of \$243.5 million. All of these reserves were classified as proved developed producing reserves. For the month of September 2007, the average daily net production from these properties was approximately 4,508 BOE/d or 4,057 BOE/d attributable to the net profits interest and were approximately 55% oil and natural gas liquids and 45% natural gas. Based on the pre-tax PV10% value in the reserve report, Whiting operates approximately 60.6% of these properties. The underlying properties are located in mature fields and have established production profiles.

The net profits interest will terminate at the time when 9.04 MMBOE have been produced from the underlying properties and sold, which is the equivalent of 8.14 MMBOE in respect of the trust's right to receive 90% of the net proceeds from such production pursuant to the net profits interest. The 9.04 MMBOE represents the proved reserves attributable to the underlying properties that the reserve report projects to be produced by December 31, 2017. However, the exact rate of production cannot be predicted with certainty and such amount may be produced before or after that date. Although it is not required to do so, Whiting plans to make capital expenditures at its sole expense for recompletions and development it deems attractive to increase production on the underlying properties without regard to the burden of the net profits interest on the underlying properties. These capital expenditures could potentially accelerate the production and sale of 9.04 MMBOE from the underlying properties.

The gross proceeds from the underlying properties used to calculate the net profits interest will be based on prices realized for oil, natural gas and natural gas liquids attributable to the underlying properties for each calendar quarter during the term of the net profits interest and calculated on an aggregate basis for all these properties. In calculating the net proceeds used to calculate the net profits interest, Whiting will deduct from the gross proceeds from oil and

natural gas sales all royalties, lease operating expenses (including costs of workovers), production and property taxes, hedge payments made by Whiting to hedge contract counterparties, maintenance expenses, postproduction costs (including plugging and abandonment liabilities) and producing overhead, all calculated on an aggregate basis for all of these properties. These expenses and costs will be

Table of Contents

reduced by hedge payments received by Whiting under the hedge contracts and other non-production revenue. However, if the hedge payments received by Whiting under the hedge contracts and other non-production revenue exceed the operating expenses during a quarterly period, the ability to use such excess amounts to offset operating expenses will be deferred, with interest accruing on such amounts at the prevailing money market rate, until the next quarterly period when the hedge payments and the other non-production revenue are less than such expenses. Capital expenditures for recompletions and development drilling will not be deducted from gross proceeds. For a more complete description of the calculation of net proceeds, see Computation of Net Proceeds.

Net proceeds payable to the trust will depend upon production quantities, sale prices of oil, natural gas and natural gas liquids, and costs to produce the oil, natural gas and natural gas liquids. If at any time costs should exceed gross proceeds, neither the trust nor the trust unitholders would be liable for the excess costs; the trust, however, would not receive any net proceeds until future net proceeds exceed the total of those excess costs, plus interest at the prevailing money market rate.

Whiting has entered into hedge contracts, which are structured as costless collar arrangements, to hedge approximately 80% of the anticipated production from the reserves attributable to the underlying properties in the reserve report for the period from January 1, 2008 through December 31, 2012 at prices ranging from \$ to \$ per Bbl of oil and at prices ranging from \$ to \$ per Mcf of natural gas. We refer to the hedge contracts to which Whiting is a party at the time of the closing of this offering that relate to the underlying properties as the hedge contracts. Whiting expects the hedge contracts will reduce the commodity price-related risks inherent in holding interests in oil and natural gas properties that have historically been characterized by significant price volatility, during the term of the hedge contracts, although they will also limit the potential for upside during the hedged period if oil and gas prices increase. As the hedge contracts cease to exist after 2012, unitholders exposure to fluctuations in commodity prices will increase. Under the terms of the conveyance, Whiting will be prohibited from entering into hedging arrangements covering the oil and natural gas production from the underlying properties following the completion of this offering.

The trust will make quarterly cash distributions of substantially all of its quarterly cash receipts of net proceeds attributable to the trust, after deduction of fees and expenses for the administration of the trust, to holders of its trust units during the term of the trust. The first quarterly distribution is expected to be made prior to or on February 29, 2008 to trust unitholders owning trust units on February 19, 2008. The trust's first quarterly distribution will consist of an amount in cash paid by Whiting equal to the amount that would have been payable to the trust had the net profits interest been in effect during the period from October 1, 2007 through December 31, 2007. The second quarterly distribution is expected to be made prior to or on May 30, 2008 to trust unitholders owning trust units on May 20, 2008. The trust's second quarterly distribution will consist of an amount in cash paid by Whiting equal to the amount that would have been payable to the trust had the net profits interest been in effect during the period from January 1, 2008 through the day prior to close of this offering plus the amount payable under the net profits interest for the period from the day of closing of the offering through March 31, 2008. The amount of quarterly cash distributions will be based on the cash attributable to the net profits interest that has been remitted by Whiting to the trustee with respect to the applicable quarter. Because the payments to the trust are on a cash basis and receipt of proceeds for natural gas sales typically lags a month behind those for oil sales, Whiting expects that the first quarterly distribution will include sales of oil for three months but sales of natural gas for only two months. Thereafter, quarterly distributions will generally include sales of both oil and natural gas for three months, with one month of the natural gas sales attributable to the prior quarter. Because payments to the trust will be generated by depleting assets and the trust has a finite life with the production from the underlying properties diminishing over time, a portion of each distribution will represent a return of your original investment.

The business and affairs of the trust will be managed by the trustee. Whiting has no ability to manage or influence the operations of the trust. The principal offices of the trustee are located at 919 Congress Avenue, Suite 500, Austin,

Texas 78701, and its telephone number is (512) 236-6599.

Table of Contents

Summary of Risk Factors

An investment in the trust units involves risks associated with fluctuation in energy commodity prices, the operation of the underlying properties, certain regulatory and legal matters, the structure of the trust and the tax characteristics of the trust units. The following list of factors is not exhaustive. Please read carefully these risks and other risks described under Risk Factors.

The amounts of cash distributions by the trust are subject to fluctuation as a result of changes in oil, natural gas and natural gas liquid prices, subject to the hedge contracts. The hedge contracts will limit the potential for increases in cash distributions due to oil and natural gas price increases during the first five years of the trust.

Actual reserves and future production may be less than current estimates, which could reduce cash distributions by the trust and the value of the trust units.

Financial returns to purchasers of trust units will vary based in part on how quickly 9.04 MMBOE are produced from the underlying properties and sold, and it is not known when that will occur.

Risks associated with the production, gathering, transportation and sale of oil, natural gas and natural gas liquids could adversely affect cash distributions by the trust and the value of the trust units.

The trust and the trust unitholders will have no voting or managerial rights with respect to the underlying properties. As a result, trust unitholders will have no ability to influence the operation of the underlying properties.

Whiting has limited control over activities on certain of the underlying properties. Whiting does not operate, which could reduce production from the underlying properties and cash available for distribution to trust unitholders.

Shortages or increases in costs of oil field equipment, services and qualified personnel could reduce the amount of cash available for distribution.

Market conditions or operational impediments may hinder access to oil and natural gas markets or delay production.

Whiting is not required to make capital expenditures on the underlying properties at historical levels or at all. If Whiting does not make capital expenditures, then the timing of production from the underlying properties may not be accelerated.

Whiting may abandon individual wells or properties that it reasonably believes to be uneconomic.

The reserves attributable to the underlying properties are depleting assets and production from those reserves will diminish over time. Furthermore, the trust is precluded from acquiring other oil and natural gas properties or net profits interests to replace the depleting assets and production.

The amount of cash available for distribution by the trust will be reduced by the amount of any royalties, lease operating expenses, production and property taxes, maintenance expenses, postproduction costs and producing overhead, and payments made with respect to the hedge contracts.

If the payments received by Whiting under the hedge contracts and certain other non-production revenue exceed operating expenses during a quarterly period, then the ability to use such excess amounts to offset operating expenses will be deferred until the next quarterly period when such amounts are less than such expenses.

An increase in the differential between the NYMEX or other benchmark price of oil and natural gas and the wellhead price received could reduce cash distributions by the trust and the value of trust units.

Under certain circumstances, the trust provides that the trustee may be required to sell the net profits interest and dissolve the trust prior to the expected termination of the trust. As a result, trust unitholders may not recover their investment.

Table of Contents

The disposal by Whiting of its remaining trust units may reduce the market price of the trust units.

There has been no public market for the trust units and no independent appraisal of the value of the net profits interest has been performed.

The market price for the trust units may not reflect the value of the net profits interest held by the trust.

Conflicts of interest could arise between Whiting and the trust unitholders.

The trust is managed by a trustee who cannot be replaced except at a special meeting of trust unitholders.

Trust unitholders have limited ability to enforce provisions of the net profits interest.

Courts outside of Delaware may not recognize the limited liability of the trust unitholders provided under Delaware law.

The operations of the underlying properties may result in significant costs and liabilities with respect to environmental and operational safety matters, which could reduce the amount of cash available for distribution to trust unitholders.

The operations of the underlying properties are subject to complex federal, state, local and other laws and regulations that could adversely affect the cash distributions to the trust unitholders.

The trust has not obtained a ruling from the IRS regarding the tax treatment of ownership of the trust units. If the IRS were to determine (and be sustained in that determination) that the trust is not a grantor trust for federal income tax purposes, or that the net profits interest is not a debt instrument for federal income tax purposes, the trust unitholders may receive different and less advantageous tax treatment than that described in this prospectus.

The trust's net profits interest may be characterized as an executory contract in bankruptcy, which could be rejected in bankruptcy, thus relieving Whiting from its obligations to make payments to the trust with respect to the net profits interest.

If the financial position of Whiting degrades in the future, Whiting may not be able to satisfy its obligations to the trust.

The trust's receipt of payments based on the hedge contracts depends upon the financial position of the hedge contract counterparties and Whiting. A default by any of the hedge contract counterparties could reduce the amount of cash available for distribution to the trust unitholders.

Whiting Petroleum Corporation

Whiting is an independent oil and gas company engaged in acquisition, development, exploitation, production and exploration activities primarily in the Permian Basin, Rocky Mountains, Mid-Continent, Gulf Coast and Michigan regions of the United States. Since Whiting's inception in 1980, Whiting has built a strong asset base and achieved steady growth through property acquisitions, development and exploration activities. Whiting's common stock trades on the New York Stock Exchange under the symbol of WLL. Whiting's principal executive offices are located at 1700 Broadway, Suite 2300, Denver, Colorado 80290-2300, and its telephone number is (303) 837-1661.

Table of Contents

Structure of the Trust

The trust will issue _____ units to Whiting prior to the completion of this offering, and Whiting Petroleum Corporation will sell approximately 78.3% of these units in this offering, or approximately a combined 90.0% if the underwriters option to purchase additional trust units from Whiting is exercised in full. The following chart shows the relationship of Whiting Petroleum Corporation, Whiting Oil and Gas Corporation, Equity Oil Company, the trust and the trust unitholders, assuming no exercise of the underwriters option to purchase additional trust units.

- (1) Prior to the closing of this offering, Whiting Petroleum Corporation's wholly-owned subsidiaries, Whiting Oil and Gas Corporation and Equity Oil Company, will convey the net profits interest to the trust in consideration for the issuance by the trust of _____ units, which will be distributed as a dividend to Whiting Petroleum Corporation. Whiting Petroleum Corporation is offering _____ trust units to the public pursuant to this offering. The underwriters may exercise their option to purchase up to _____ trust units in the aggregate at the initial offering price, less the underwriting discounts and commissions, to cover over-allotments, if any, within 30 days of the date of this prospectus from Whiting Petroleum Corporation.
- (2) Represents Whiting Oil and Gas Corporation's and Equity Oil Company's interests in the underlying properties. For those underlying properties for which Whiting is designated as the operator and those it is not, these interests on average consist of an approximate 68.3% and 16.9%, respectively, working interest in the leasehold interests to which the underlying properties relate (and, after taking into account royalty interests and other non-working interests burdening this working interest, an approximate 55.9% and 14.0%, respectively, net revenue interest in the oil and natural gas properties to which the underlying properties relate).

The Underlying Properties

The underlying properties consist of Whiting's net interests in certain of its oil and natural gas producing properties located primarily in the Rocky Mountains, Mid-Continent, Permian Basin and Gulf Coast regions of the United States, after deduction of all royalties and other burdens on production thereon. The underlying

Table of Contents

properties include interests in approximately 3,000 producing oil and natural gas wells in 173 fields on 195,616 gross acres in 14 states. Whiting has acquired interests in these properties through various acquisitions that have occurred during its 27 year existence. For the month ended September 2007, the average daily net production from these properties was 4,508 BOE/d. Whiting's interests in these properties require Whiting to bear its proportionate share, along with the other working interest owners, of the costs of development and operation of such properties. The net profits interest entitles the trust to receive 90% of the net proceeds from the sale of production of 9.04 MMBOE (which is equivalent to 8.14 MMBOE attributable to the net profits interest) of proved reserves during the term of the trust. The 9.04 MMBOE represents the proved reserves attributable to the underlying properties that the reserve report projects to be produced by December 31, 2017. As of September 30, 2007, proved reserves attributable to the underlying properties, as estimated in the reserve report, were 13.18 MMBOE with a pre-tax PV10% value of \$243.5 million. The reserves attributable to the underlying properties include all reserves expected to be economically produced during the life of the properties, whereas the trust is entitled to only receive 90% of the net proceeds from the sale of production of oil, natural gas and natural gas liquids attributable to the underlying properties until the underlying properties have produced 9.04 MMBOE.

Whiting's interest in the underlying properties after deducting the net profits interest entitles it to 10% of the net proceeds from the sale of production of oil, natural gas and natural gas liquids attributable to the underlying properties during the term of the net profits interest and all of the net proceeds thereafter. The trust units retained by Whiting, which represent 21.7% of the trust units following the closing of this offering, assuming no exercise of the underwriters' option to purchase additional trust units, are subject to lock-up arrangements. See Trust Units Eligible for Future Sale Lock-up Agreements. Whiting believes that its retained ownership interests in the underlying properties and its ownership of trust units, which together entitle Whiting to receive approximately 29.5% of the net proceeds from the underlying properties, assuming no exercise of the underwriters' option to purchase additional trust units, will provide incentive to operate (or cause to be operated) the underlying properties in an efficient and cost-effective manner. In addition, Whiting has agreed to operate these properties as a reasonably prudent operator in the same manner that it would operate if these properties were not burdened by the net profits interest and Whiting has agreed to use commercially reasonable efforts to cause the other operators to operate these properties in the same manner.

Major Producing Areas

The following table summarizes the estimated proved reserves by region attributable to the net profits interest according to the reserve report, the corresponding pre-tax PV10% value as of September 30, 2007 and the average daily net production attributable to the net profits interest for the month of September 2007.

Region	Number of Fields	Oil (Mbbbl)	Natural Gas (MMcf)	Proved Reserves (1)			Pre-Tax PV10% Value (In millions)	% of Total	September 2007 Average Daily Net Production (BOE/d)
				Total (MBOE)(2)	% of Total Reserves	Value(2)(3)			
Rocky Mountains	65	2,571	2,567	2,999	36.8%	\$ 83.9	42.3%	1,285	
Mid-Continent	54	1,559	10,300	3,276	40.2	70.7	35.6	1,623	
Permian Basin	28	837	1,992	1,169	14.4	28.6	14.4	602	
Gulf Coast	26	190	3,043	697	8.6	15.3	7.7	547	

Total	173	5,157	17,902	8,141	100.0%	\$ 198.5	100.0%	4,057
-------	-----	-------	--------	-------	--------	----------	--------	-------

- (1) The net profits interest entitles the trust to receive 90% of the net proceeds from the sale of production of 9.04 MMBOE from the underlying properties, taken as a whole. The allocation and makeup of such reserves among regions is from the reserve report and may not reflect the actual location and makeup from which reserves will be produced under the net profits interest.
- (2) The total proved reserves attributable to the underlying properties, as estimated in the reserve report, were 13.18 MMBOE with a pre-tax PV10% value of \$243.5 million, although the net profits interest will terminate when 9.04 MMBOE have been produced. The amounts in the table reflect the trust's 90% net profits interest in such reserves. Proved reserves reflected in the table above for the net profits interest are based

Table of Contents

on NYMEX oil and natural gas prices as of September 30, 2007 of \$81.66 per Bbl of oil and \$6.15 per Mcf of natural gas less field transportation, quality and basis differentials of \$8.20 per Bbl of oil and \$0.25 per Mcf of natural gas, resulting in field adjusted prices of \$73.46 per Bbl of oil and \$5.90 per Mcf of natural gas.

- (3) Pre-tax PV10% value may be considered a non-GAAP financial measure as defined by the SEC and is derived from the standardized measure of discounted future net cash flows, which is the most directly comparable GAAP financial measure. Pre-tax PV10% value is computed on the same basis as the standardized measure of discounted future net cash flows but without deducting future income taxes. However, as of September 30, 2007, no provision for federal or state income taxes has been provided because taxable income is passed through to the unitholders of the trust. Therefore, the standardized measure of discounted future net cash flows attributable to the net profits interest is equal to the pre-tax PV10% value. The pre-tax PV10% value and the standardized measure of discounted future net cash flows do not purport to present the fair value of the oil and natural gas reserves attributable to the net profits interest.

The underlying properties are located in several major onshore producing basins in the continental United States. Whiting believes this broad distribution provides a buffer against regional trends that may negatively impact production or prices. Based on the pre-tax PV10% value in the reserve report, approximately 60.6% of these properties were operated by Whiting. Based on September 2007 production attributable to the net profits interest, approximately 55% was oil and natural gas liquids and 45% was natural gas. These properties are located in mature fields and have established production profiles. However, production and distributions to the trust will decline over time.

Rocky Mountains Region. The underlying properties in the Rocky Mountains region are located in two distinct areas. The first, from which oil is primarily produced, includes the Williston Basin in North Dakota and Montana and the Bighorn and Powder River Basins of Wyoming and the second, from which natural gas is primarily produced, includes southwest Wyoming, Colorado and Utah. These properties include 65 fields of which Whiting operates wells in 33 of these fields. The major North Dakota fields in this region include Bell Field and Fryberg Field that produce from Tyler sandstone, Whiskey Joe Field that produces primarily from the Mississippian Madison zone and Davis Creek Field that produces from the Fryberg zone. In Montana, the major fields include the Bainville Field and Palomino Fields that produce primarily from the Nisku zone. The major Wyoming fields in this region include the Sage Creek Field in the Bighorn Basin that produces from the Tensleep and Madison zones and the Kiehl Field in the Powder River Basin, which produces from the Minnelusa formation and is under waterflood. The Ignacio Blanco Field is the major Colorado field in this region and produces from the Fruitland Coal zone. Average daily net production attributable to the net profits interest from these properties was 1,285 BOE/d for the month of September 2007 from 677 wells that will be burdened by the net profits interest.

Mid-Continent Region. The underlying properties in the Mid-Continent region are located in Arkansas, Oklahoma, Kansas and Michigan. These properties include 54 fields of which Whiting operates wells in 30 of these fields. The major Arkansas field in this region is the Magnolia Smackover Pool Unit, which is the largest single field in the underlying properties. The major fields and areas in Oklahoma are located in the Anadarko Basin and include Putnam Field, Mocane-Laverne Gas Area, Sho-Vel-Tum Field and Nobscot Northwest Field, which primarily produce from the Oswego, Hunton, Penn, Morrow, Red Fork and Cottage Grove zones. Case Field is the major Michigan field in the region and produces from the Silurian Niagaran zone. Average daily net production attributable to the net profits interest from these properties was 1,623 BOE/d for the month of September 2007 from 455 wells that will be burdened by the net profits interest.

Permian Basin Region. The Permian Basin Region of West Texas and New Mexico is one of the major hydrocarbon producing provinces in the continental United States. The underlying properties in the Permian Basin region are located in Texas and New Mexico. These properties include 28 fields of which Whiting operates wells in 10 of these

fields. The major fields in this region include Iatan East Howard Field, which produces from the San Andres, Glorieta and Clearfork zones; the Fullerton Field, which is unitized and produces from the Clearfork zone; and Patricia Field, which produces from the Sprayberry and Fusselman zones. Average daily net production attributable to the net profits interest from these properties was 602 BOE/

Table of Contents

d for the month of September 2007 from approximately 1,612 wells that will be burdened by the net profits interest.

Gulf Coast Region. The underlying properties in the Gulf Coast region are located in Texas, Louisiana, Mississippi and Alabama. These properties include 26 onshore fields of which Whiting operates wells in two of these fields. The major field in this region is the Mestena Grande Field located in Texas, which produces from the Queen City zone. Average daily net production attributable to the net profits interest from these properties was 547 BOE/d for the month of September 2007 from approximately 264 wells that will be burdened by the net profits interest.

Key Investment Considerations

The following are some key investment considerations related to the underlying properties, the net profits interest and the trust units:

Strong Oil Pricing Fundamentals. Based on September 2007 production attributable to the net profits interest, approximately 55% was crude oil and natural gas liquids. Crude oil prices have increased substantially during the last several years, primarily due to increased demand for crude oil on a worldwide basis, especially from the developing economies in China and India, without a corresponding increase in crude oil production. In addition, geopolitical instability and military conflicts in certain significant oil producing nations have led to supply interruptions and increased uncertainty regarding the levels of future supplies of crude oil.

Long Production Histories. The mature oil and natural gas properties comprising the underlying properties have established production profiles. Based on the reserve report, production attributable to the underlying properties is expected to decline at an average year over year rate of approximately 11% between 2008 and 2017.

Proved Developed Producing Reserve Base. Proved developed producing reserves may be considered the most valuable and lowest risk category of reserves because production has already commenced and the reserves do not require significant future development costs. Proved developed producing reserves attributable to the underlying properties represented all of the discounted present value of estimated future net revenues from the underlying properties.

Downside Price Protection During the First Five Years of the Trust. For the period from January 1, 2008 through December 31, 2012, Whiting has entered into costless collar arrangements to hedge approximately 80% of the anticipated production from the reserves attributable to the underlying properties at prices ranging from \$ to \$ per Bbl of oil and at prices ranging from \$ to \$ per Mcf of natural gas. Assuming production occurs as estimated by the reserve report, this would represent approximately 47% of the proved reserves attributable to the net profits interest. The hedge contracts are intended to provide returns to unitholders and reduce the fluctuations in cash distributions to unitholders resulting from fluctuations in crude oil and natural gas prices, which have been characterized by significant volatility.

Diversified Well Locations. The underlying properties include interests in approximately 3,000 producing wells in 173 fields located in 14 states. As a result, the loss of production from any one well or group of wells is not likely to have a material adverse effect on the net proceeds from the sale of production that are allocable to the trust.

Recognized Sponsor with a Successful Track Record and Experienced Management. Whiting Petroleum Corporation is an independent oil and gas company whose common stock is traded on the New York Stock Exchange under the symbol of WLL. Since its inception in 1980, Whiting has built a strong asset base and achieved steady growth through property acquisitions as well as development and exploration activities.

Whiting's management team averages over 25 years of experience in the oil and gas industry. Additionally, Whiting's personnel have extensive operational experience in each of the core geographical areas in which the oil and natural gas properties comprising the underlying properties are located.

Table of Contents

Potential Upside from Drilling and Recompletions. Although it is not required to do so, Whiting plans to make capital expenditures for development and recompletions it deems attractive to increase production on the underlying properties. The costs of these capital expenditures would be borne by Whiting, and would not be allocated to the costs used to determine net proceeds under the net profits interest. These capital expenditures could potentially accelerate the production and sale of the 8.14 MMBOE of proved reserves attributable to the net profits interest and, accordingly, potentially accelerate cash distributions by the trust.

Summary of Proved Reserves

Summary of Proved Reserves of Underlying Properties and Net Profits Interest. The following table sets forth, as of September 30, 2007, certain estimated proved oil (including natural gas liquids) and natural gas reserves estimated future net revenues and the discounted present value thereof attributable to the underlying properties and the net profits interest, in each case derived from the reserve report. The reserve report was prepared by Cawley, Gillespie & Associates, Inc. in accordance with criteria established by the Securities and Exchange Commission, or SEC. Proved reserves reflected in the table below for the underlying properties and net profits interest are based on NYMEX oil and natural gas prices as of September 30, 2007 of \$81.66 per Bbl of oil and \$6.15 per Mcf of natural gas less field transportation, quality and basis differentials of \$8.20 per Bbl of oil and \$0.25 per Mcf of natural gas, resulting in field adjusted prices of \$73.46 per Bbl of oil and \$5.90 per Mcf of natural gas. Oil equivalents in the table are the sum of the Bbls of oil and natural gas liquids and the BOE of the stated Mcfs of natural gas, calculated on the basis that six Mcfs of natural gas is the energy equivalent of one Bbl of oil. The estimated future net revenues attributable to the net profits interest as of September 30, 2007, are net of the trust's proportionate share of all estimated costs deducted from revenue pursuant to the terms of the conveyance creating the net profits interest and include only the reserves attributable to the underlying properties that are expected to be produced within the term of the net profits interest. A summary of the reserve report is included as Appendix A to this prospectus.

	Proved Reserve(1)			Estimated Future Net Revenues from Proved Reserves	
	Natural		Oil	Undiscounted	Discounted(2)
	Oil (MBbl)	Gas (MMcf)	Equivalent (MBOE)		
Underlying properties (100%)(3)	8,663	27,082	13,176	\$ 415,055	\$ 243,535
Underlying properties (attributable to the net profits interest)(4)	5,157	17,902	8,141	\$ 279,074	\$ 198,481
Net profits interest with cost reductions(5)	3,016	10,569	4,778	\$ 279,074	\$ 198,481
Amount per trust unit(6)				\$	\$

(1) The net profits interest entitles the trust to receive 90% of the net proceeds from the sale of production of 9.04 MMBOE from the underlying properties, which equals 8.14 MMBOE.

(2) The present values of estimated future net revenues for the underlying properties and the net profits interest were determined using a discount rate of 10% per annum. As of September 30, 2007, no provision for federal or state income taxes has been provided because taxable income is passed through to the unitholders of the trust.

Therefore, the standardized measure of the underlying properties and the underlying properties attributable to the net profits interest equal their corresponding pre-tax PV10% values, which totaled \$243.5 million and \$198.5 million, respectively, as of September 30, 2007.

- (3) Reserve volumes and estimated future net revenues for the underlying properties reflect volumes and revenues attributable to the underlying properties.
- (4) Reflects 90% of the estimated proved reserves attributable to the underlying properties expected to be produced within the term of the net profits interest based on the reserve report. Estimated future net revenues from proved reserves takes into account future estimated costs that are deducted in calculating net proceeds.
- (5) Proved reserves for the net profits interest are calculated as (x) 90% of the estimated proved reserves of the underlying properties less (y) reserve quantities of a sufficient value to pay 90% of the future estimated

Table of Contents

costs that are deducted in calculating net proceeds. Accordingly, proved reserves for the net profits interest reflect quantities expected to be produced during the term of the net profits interest that are calculated after reductions for future costs and expenses based on price and cost assumptions used in the reserve estimates. Estimated future net revenues from proved reserves takes into account future estimated costs that are deducted in calculating net proceeds.

(6) Assumes trust units outstanding.

Annual Production Attributable to Net Profits Interest. The following graph shows estimated production of total proved reserves attributable to the net profits interest during the term of the net profits interest based upon the pricing and other assumptions set forth in the reserve report. The net profits interest will terminate at the time when 9.04 MMBOE have been produced from the underlying properties and sold (which amount is the equivalent of 8.14 MMBOE in respect of the trust's right to receive 90% of the net proceeds from such reserves pursuant to the net profits interest). The reserve report projects that 9.04 MMBOE will have been produced from the underlying properties and sold by December 31, 2017, which reflects an average year over year decline rate of approximately 11% between 2008 and 2017. However, cash distributions to unitholders may decline at a faster rate than the rate of production due to fixed and semi-variable costs attributable to the underlying properties. Also, the exact rate of production cannot be predicted with certainty and such amount may be produced before or after that date. Although it is not required to do so, Whiting plans to make capital expenditures at its sole expense for recompletions and development it deems attractive to increase production on the underlying properties without regard to the burden of the net profits interest on the underlying properties. These capital expenditures could potentially accelerate the production and sale of 9.04 MMBOE from the underlying properties. The following graph does not include the impact of any such capital expenditures by Whiting.

Table of Contents**Historical Results of the Underlying Properties**

The selected financial data presented below should be read in conjunction with the audited statements of historical revenues and direct operating expenses and the unaudited statements of historical revenues and direct operating expenses of the underlying properties, the related notes and Discussion and Analysis of Historical Results of the Underlying Properties included elsewhere in this prospectus. The following table sets forth revenues, direct operating expenses and the excess of revenues over direct operating expenses relating to the underlying properties for the three years in the period ended December 31, 2006, and for the nine-month periods ended September 30, 2006 and 2007, derived from the underlying properties audited and unaudited statements of historical revenues and direct operating expenses included elsewhere in this prospectus. The unaudited statements were prepared on a basis consistent with the audited statements and, in the opinion of Whiting, include all adjustments (consisting only of normal recurring adjustments) necessary to present fairly the revenues, direct operating expenses and the excess of revenues over direct operating expenses relating to the underlying properties for the periods presented. The historical financial information includes the results of acquisitions beginning on the following dates: Equity Oil Company, July 20, 2004; Permian Basin Properties, September 23, 2004; Institutional Partnership Interests, June 23, 2005; Celero Energy, LP, October 4, 2005; and Howard Energy, August 3, 2006.

	Year ended December 31,			Nine months ended	
	2004	2005	2006	September 30, 2006 (Unaudited)	2007 (Unaudited)
Revenues:					
Oil sales	\$ 30,539,666	\$ 43,498,823	\$ 53,232,066	\$ 41,058,591	\$ 41,148,501
Natural gas sales	23,460,243	36,135,271	31,397,455	24,193,531	20,736,595
Total revenues	53,999,909	79,634,094	84,629,521	65,252,122	61,885,096
Direct operating expenses:					
Lease operating	10,854,433	16,180,693	21,912,702	15,687,225	16,952,622
Production tax	3,954,703	5,602,452	6,006,308	4,621,121	4,365,517
Total direct operating expenses	14,809,136	21,783,145	27,919,010	20,308,346	21,318,139
Excess of revenues over direct operating expenses	\$ 39,190,773	\$ 57,850,949	\$ 56,710,511	\$ 44,943,776	\$ 40,566,957

Table of Contents

The following table provides oil and natural gas sales volumes, average sales prices and capital expenditures relating to the underlying properties for the three years in the period ended December 31, 2006, and for the nine-month periods ended September 30, 2006 and 2007. Sales volumes for natural gas liquids are included with oil sales since they were not material. There were no hedges or other derivative activity attributable to the underlying properties during such periods. The historical financial information includes the results of acquisitions beginning on the following dates: Equity Oil Company, July 20, 2004; Permian Basin Properties, September 23, 2004; Institutional Partnership Interests, June 23, 2005; Celero Energy, LP, October 4, 2005; and Howard Energy, August 3, 2006.

	Year ended December 31,			Nine months ended	
	2004	2005	2006	September 30, 2006	2007
Operating data:					
Net production:					
Oil (MBbls)	827	893	946	704	717
Natural gas (MMcf)	4,268	5,082	5,057	3,838	3,328
Total production (MBOE)	1,538	1,740	1,789	1,344	1,271
Oil (per Bbl)	\$ 36.95	\$ 48.72	\$ 56.24	\$ 58.32	\$ 57.42
Natural gas (per Mcf)	\$ 5.50	\$ 7.11	\$ 6.21	\$ 6.30	\$ 6.23
Drilling and development capital expenditures (in thousands)(1):	\$ 6,396	\$ 6,453	\$ 10,036	\$ 6,908	\$ 5,280

(1) Whiting cannot provide any assurance that future capital expenditures will be consistent with historical levels.

Summary Projected Cash Distributions

The following table sets forth a projection of cash distributions to holders of trust units who own trust units as of the record date for the distribution related to oil, natural gas and natural gas liquid production for the first quarter of 2008 and continue to own those trust units through the record date for the cash distribution payable with respect to oil, natural gas and natural gas liquid production for the last quarter of 2008. The table also reflects the methodology for calculating the projected cash distribution. The cash distribution projections were prepared by Whiting for the twelve months ending December 31, 2008 on an accrual of production basis based on the hypothetical assumptions that are described below and in Projected Cash Distributions Significant Assumptions Used to Prepare the Projected Cash Distributions. Actual cash distributions will be on a cash basis and may vary from those presented.

Whiting does not as a matter of course make public projections as to future sales, earnings, or other results. However, the management of Whiting has prepared the prospective financial information set forth below to present the projected cash distributions to the holders of the trust units based on the estimates and hypothetical assumptions described below. The accompanying prospective financial information was not prepared with a view toward public disclosure or with a view toward complying with the guidelines established by the American Institute of Certified Public Accountants with respect to prospective financial information, but, in

the view of Whiting's management, was prepared on a reasonable basis, reflects the best currently available estimates and judgments, and presents, to the best of management's knowledge and belief, the expected course of action and the expected future financial performance of the net profits interest. However, this information is not fact and should not be relied upon as being indicative of future results, and readers of this prospectus are cautioned not to place undue reliance on the prospective financial information.

Neither Whiting's independent auditors, nor any other independent accountants, have compiled, examined, or performed any procedures with respect to the prospective financial information contained herein, nor have they expressed any opinion or any other form of assurance on such information or its

Table of Contents

achievability, and assume no responsibility for, and disclaim any association with, the prospective financial information.

In the view of Whiting's management, the accompanying unaudited projected financial information was prepared on a reasonable basis and reflects the best currently available estimates and judgments of Whiting related to oil, natural gas and natural gas liquid production, operating expenses and capital expenses, based on:

the oil, natural gas and natural gas liquid production estimates contained in the reserve report; and

any royalties, lease operating expenses, production and property taxes, maintenance expenses, postproduction costs and producing overhead, and payments made and costs with respect to the hedge contracts for the twelve months ending December 31, 2008.

The projected financial information was also based on the hypothetical assumption that prices for oil, natural gas and natural gas liquids remain constant during the twelve months ending December 31, 2008, at a price that equals 80% of the NYMEX futures prices for oil and natural gas on , 2008, plus 20% of the Bloomberg consensus price forecasts on , 2008 for oil and natural gas for 2008. The NYMEX futures prices on , 2008 were \$ per Bbl of oil and \$ per Mcf of natural gas and the Bloomberg consensus price forecasts were \$ per Bbl of oil and \$ per Mcf of natural gas on , 2008, which equals blended prices of \$ per Bbl of oil and \$ Mcf of natural gas. Because there is no Bloomberg consensus price for natural gas liquids, Whiting used a hypothetical price equal to approximately 66% of the price used in the projected cash distribution table for oil, which is consistent with the historical pricing realized by Whiting for natural gas liquids and is the methodology used in the reserve report. These hypothetical prices were adjusted to take into account Whiting's estimate of the basis differential (based on location and quality of the production) between published commodity prices and the prices actually received by Whiting. Actual prices paid for oil, natural gas and natural gas liquids expected to be produced from the underlying properties in 2008 will likely differ from these hypothetical prices due to fluctuations in the prices generally experienced with respect to the production of oil, natural gas and natural gas liquids, and such prices may be higher or lower than utilized for purposes of the projected financial information. For example, the published average monthly closing NYMEX crude oil spot price per Bbl was \$66.12 for the nine months ended September 30, 2007, with the monthly closing prices ranging from \$54.67 to \$79.63 during such period. See Risk Factors The amounts of the cash distributions by the trust are subject to fluctuation as a result of changes in oil, natural gas and natural gas liquid prices.

Whiting utilized these production estimates, hypothetical oil, natural gas and natural gas liquid prices and cost estimates in preparing the projected financial information. This methodology is consistent with the requirements of the SEC for estimating oil, natural gas and natural gas liquid reserves and discounted present value of future net revenues attributable to the net profits interest, other than the use of the NYMEX futures prices for oil and natural gas on , 2008 and Bloomberg consensus price forecasts rather than the use of constant prices based on the prices in effect at the time of the reserve estimate as required by the rules and regulations of the SEC. The actual production amounts, commodity prices and costs for 2008, however, are not known for certain.

The projections and the estimates and hypothetical assumptions on which they are based are subject to significant uncertainties, many of which are beyond the control of Whiting or the trust. **Actual cash distributions to trust unitholders, therefore, could vary significantly based upon events or conditions occurring that are different from the events or conditions assumed to occur for purposes of these projections.** Cash distributions to trust unitholders will be particularly sensitive to fluctuations in oil, natural gas and natural gas liquid prices. See Risk Factors The amounts of the cash distributions by the trust are subject to fluctuation as a result of changes in oil, natural gas and natural gas liquid prices and Projected Cash Distributions Sensitivity of Projected Cash Distributions to Oil, Natural Gas and Natural Gas Liquid Production and Prices, which shows projected effects on cash distributions

from hypothetical changes in oil and natural gas prices. **As a result of typical production declines for oil and natural gas properties, production estimates generally decrease from year to year, and the projected cash distributions shown in**

Table of Contents

the table below are not indicative of distributions for future years. See **Projected Cash Distributions** **Sensitivity of Projected Cash Distributions to Oil, Natural Gas and Natural Gas Liquid Production and Prices**, which shows projected effects on cash distributions from hypothetical changes in oil and natural gas production. Because payments to the trust will be generated by depleting assets and the trust has a finite life with the production from the underlying properties diminishing over time, a portion of each distribution will represent a return of your original investment. Based on the reserve report, production attributable to the underlying properties is expected to decline at an average year over year rate of approximately 11% between 2008 and 2017. However, cash distributions to unitholders may decline at a faster rate than the rate of production due to fixed and semi-variable costs attributable to the underlying properties. See **Risk Factors** The reserves attributable to the underlying properties are depleting assets and production from those reserves will diminish over time. Furthermore, the trust is precluded from acquiring other oil and natural gas properties or net profits interests to replace the depleting assets and production.

Projected Cash Distributions	Projection for Twelve Months Ending December 31, 2008, Based on Oil, Natural Gas and Natural Gas Liquid Production in Reserve Report(2) (dollars in thousands, except per Bbl, Mcf and per trust unit amounts)
Underlying properties sales volumes:	
Oil and natural gas liquids (MBbls)

(1) Assumes trust units outstanding.

(2) The cash distribution projections were prepared by Whiting on an accrual of production basis based on hypothetical assumptions. Actual cash distributions will be on a cash basis and may vary from those presented. For more information about the hypothetical assumptions made in preparing the table above, see Projected Cash Distributions Significant Assumptions Used to Prepare the Projected Cash Distributions.

Table of Contents**The Offering**

Trust units offered by Whiting	units
Trust units outstanding	units
Use of proceeds	Whiting is offering all of the trust units to be sold in this offering and Whiting will receive all proceeds from the offering. Whiting intends to use the funds to repay a portion of the debt outstanding under its credit agreement. See Use of Proceeds.
Proposed NYSE symbol	WHX
Quarterly cash distributions	<p>Actual cash distributions to the trust unitholders will depend upon the quantity of oil, natural gas and natural gas liquids produced and attributable to the underlying properties, the prices received for oil, natural gas and natural gas liquid production and other factors. Because payments to the trust will be generated by depleting assets and the trust has a finite life with the production from the underlying properties diminishing over time, a portion of each distribution will represent a return of your original investment. Oil, natural gas and natural gas liquid production from proved reserves attributable to the underlying properties is expected to decline over the term of the trust. See Risk Factors.</p> <p>It is expected that quarterly cash distributions during the term of the trust will be made by the trustee no later than 60 days following the end of each quarter (or the next succeeding business day) to the trust unitholders of record on the 50th day following the end of each quarter.</p>
Net profits interest	The net profits interest will be conveyed to the trust out of Whiting's interests in the underlying properties. The net profits interest will entitle the trust to receive 90% of the net proceeds during the term of the trust from the sale of production of oil, natural gas and natural gas liquids attributable to the underlying properties.
Termination of the trust	The net profits interest will terminate at the time when 9.04 MMBOE have been produced from the underlying properties and sold (which amount is the equivalent of 8.14 MMBOE in respect of the trust's right to receive 90% of the net proceeds from such reserves pursuant to the net profits interest), and the trust will soon thereafter wind up its affairs and terminate.
Net proceeds	The conveyance creating the net profits interest entitles the trust to receive an amount of cash for each quarter equal to 90% of the net proceeds from the sale of oil, natural gas and natural gas liquid production attributable to the underlying properties during the term of the net profits interest. In general, gross proceeds means the sales price received by Whiting from sales of oil, natural gas and natural gas liquids attributable to the underlying properties calculated on an aggregate basis for all these

properties for each calendar quarter. Net proceeds equals the gross proceeds, less all royalties, lease operating expenses (including costs of workovers), production and property taxes, payments made by Whiting to hedge contract counterparties upon settlements of the hedge contracts, maintenance expenses, postproduction costs (including plugging

Table of Contents

and abandonment liabilities) and producing overhead, all calculated on an aggregate basis for all of these properties. These expenses and costs will be reduced by hedge payments received by Whiting under the hedge contracts and other non-production revenue. If the hedge payments received by Whiting under the hedge contracts and other non-production revenue exceed the operating expenses during a quarterly period, the ability to use such excess amounts to offset operating expenses will be deferred, with interest accruing on such amounts at the prevailing money market rate, until the next quarterly period when the hedge payments and the other non-production revenue are less than such expenses. Capital expenditures for recompletions and development drilling will not be deducted from gross proceeds. For a more detailed description of the determination of net proceeds, see Computation of Net Proceeds.

Administrative services fee payable to Whiting

Whiting will be entitled to receive an annual administrative services fee, payable quarterly, during the term of the trust, for providing accounting, bookkeeping and informational services relating to the net profits interest. The fee will total \$200,000 per year. A more detailed description of the administrative services fee is set forth under the caption The Trust Administrative Services Fee.

Summary of income tax consequences

Trust unitholders will be taxed directly on the income from assets of the trust. The net profits interest should be treated as a debt instrument for federal income tax purposes, and a trust unitholder in that event will be required to include in such trust unitholder's income its share of the interest income on such debt instrument as it accrues in accordance with the rules applicable to contingent payment debt instruments contained in the Internal Revenue Code of 1986, as amended and the corresponding regulations, as well as such trust unitholder's share of any income on the trust's hedges. If the net profits interest is not treated as a debt instrument, then a trust unitholder would be allowed to recoup its basis in the net profits interest on a schedule that is in proportion to production from the net profits interest and that is more favorable to a trust unitholder than the schedule on which basis will be recovered if the net profits interest is treated as a debt instrument for federal income tax purposes. However, the deductions that would be allowed to an individual trust unitholder in that event may be itemized deductions, the deductibility of which would be subject to limitations that may or may not apply depending upon the trust unitholder's circumstances. See Federal Income Tax Consequences.

Investing in Trust Units

Investing in these trust units differs from investing in corporate common stock because:

trust unitholders are owed a fiduciary duty by the trustee, but not by Whiting;

trust unitholders have limited voting rights;

trust unitholders are taxed directly on their share of trust net income;

substantially all trust income must be distributed to trust unitholders; and

trust assets are limited to the net profits interest, which has a finite economic life.

Table of Contents

RISK FACTORS

You should carefully consider each of the risks described below, together with all of the other information contained or incorporated by reference in this prospectus before deciding to invest in the trust units. If any of the following risks develop into actual events, the amount of cash available for distributions to trust unitholders and the value of the trust units could be reduced.

The amounts of cash distributions by the trust are subject to fluctuation as a result of changes in oil, natural gas and natural gas liquid prices, subject to the hedge contracts. The hedge contracts will limit the potential for increases in cash distributions due to oil and natural gas price increases during the first five years of the trust.

The reserves attributable to the underlying properties and the quarterly cash distributions of the trust are highly dependent upon the prices realized from the sale of oil, natural gas and natural gas liquids. Prices of oil, natural gas and natural gas liquids can fluctuate widely on a quarter-to-quarter basis in response to a variety of factors that are beyond the control of the trust and Whiting. These factors include, among others:

political conditions or hostilities in oil and natural gas producing regions, including the Middle East and South America;

weather conditions or force majeure events;

levels of supply of and demand for oil, natural gas and natural gas liquids;

U.S. and worldwide economic conditions;

the price and availability of alternative fuels;

the proximity to, and capacity of, refineries and gathering and transportation facilities; and

energy conservation and environmental measures.

Moreover, government regulations, such as regulation of natural gas gathering and transportation and possible price controls, can affect commodity prices in the long term.

Recent oil prices have been high compared to historical prices. For example, the NYMEX crude oil spot prices per Bbl were \$32.52, \$43.45, \$61.04 and \$61.05 as of December 31, 2003, 2004, 2005 and 2006, respectively, and was \$94.53 as of October 31, 2007. Additionally, natural gas prices have been volatile in the recent past. For example, natural gas prices based upon delivery at the Henry Hub in Louisiana were \$6.19, \$6.15, \$9.52 and \$5.52 as of December 31, 2003, 2004, 2005 and 2006, respectively, and was \$7.28 as of October 31, 2007.

Whiting has entered into hedge contracts, which are structured as costless collar arrangements, that will hedge approximately 80% of the oil and natural gas volumes expected to be produced from the underlying properties through 2012. These hedge contracts, however, do not cover all of the oil and natural gas volumes that are expected to be produced during the term of the trust. Because of the differential between NYMEX or other benchmark prices of oil and natural gas and the wellhead price received, hedge contracts may not totally offset the effects of price fluctuations. Whiting has not entered into any hedge contracts relating to oil and natural gas volumes expected to be produced after 2012, and the terms of the conveyance of the net profits interest will prohibit Whiting from entering into new hedging arrangements following the completion of this offering. As a result, the amounts of the cash distributions may

fluctuate significantly after 2012 as a result of changes in commodity prices because there will be no hedge contracts in place to reduce the effects of any changes in commodity prices. The hedge contracts may also limit the amount of cash available for distribution if prices increase. In addition, the hedge contracts are subject to counterparty nonperformance and other risks. For a discussion of the hedge contracts, see The Underlying Properties Hedge Contracts.

Lower prices of oil, natural gas and natural gas liquids will reduce the amount of the net proceeds to which the trust is entitled and may ultimately reduce the amount of oil, natural gas and natural gas liquids that is economic to produce from the underlying properties. As a result, the operator of any of the underlying

Table of Contents

properties could determine during periods of low commodity prices to shut in or curtail production from the underlying properties. In addition, the operator of these properties could determine during periods of low commodity prices to plug and abandon marginal wells that otherwise may have been allowed to continue to produce for a longer period under conditions of higher prices. Because these properties are mature, decreases in commodity prices could have a more significant effect on the economic viability of these properties as compared to more recently discovered properties. The commodity price sensitivity of these mature wells is due to a culmination of factors that vary from well-to-well, including the additional costs associated with water handling and disposal, chemicals, surface equipment maintenance, downhole casing repairs and reservoir pressure maintenance activities that are necessary to maintain production. As a result, the volatility of commodity prices may cause the amount of future cash distributions to trust unitholders to fluctuate, and a substantial decline in the price of oil, natural gas or natural gas liquids will reduce the amount of cash available for distribution to the trust unitholders.

Actual reserves and future production may be less than current estimates, which could reduce cash distributions by the trust and the value of the trust units.

The value of the trust units and the amount of future cash distributions to the trust unitholders will depend upon, among other things, the accuracy of the production and reserves estimated to be attributable to the underlying properties and the net profits interest. Estimating production and reserves is inherently uncertain. Ultimately, actual production, revenues and expenditures for the underlying properties will vary both positively and negatively from estimates and those variations could be material. Petroleum engineers consider many factors and make assumptions in estimating production and reserves. Those factors and assumptions include:

- historical production from the area compared with production rates from other producing areas;

- the assumed effect of governmental regulation; and

- assumptions about future prices of oil, natural gas and natural gas liquids, including differentials, production and development expenses, gathering and transportation costs, severance and excise taxes and capital expenditures.

Changes in these assumptions can materially increase or decrease production and reserve estimates.

The estimated reserves attributable to the net profits interest and the estimated future net revenues attributable to the net profits interest are based on estimates of reserve quantities and revenues for the underlying properties. See *The Underlying Properties Reserves* for a discussion of the method of allocating proved reserves to the underlying properties and the net profits interest. The quantities of reserves attributable to the underlying properties and the net profits interest may decrease in the future as a result of future decreases in the price of oil, natural gas or natural gas liquids.

Financial returns to purchasers of trust units will vary in part based on how quickly 9.04 MMBOE are produced from the underlying properties and sold, and it is not known when that will occur.

The net profits interest will terminate at the time when 9.04 MMBOE have been produced from the underlying properties and sold. The reserve report projects that 9.04 MMBOE will have been produced from the underlying properties and sold by December 31, 2017. However, the exact rate of production cannot be predicted with certainty and such amount may be produced before or after that date. If production attributable to the underlying properties is slower than estimated, then financial returns to purchasers of trust units will be lower assuming constant prices because cash distributions attributable to such production will occur at a later date.

Risks associated with the production, gathering, transportation and sale of oil, natural gas and natural gas liquids could adversely affect cash distributions by the trust and the value of the trust units.

The revenues of the trust, the value of the trust units and the amount of cash distributions to the trust unitholders will depend upon, among other things, oil, natural gas and natural gas liquid production and prices

Table of Contents

and the costs incurred to exploit oil and natural gas reserves attributable to the underlying properties. Drilling, production or transportation accidents that temporarily or permanently halt the production and sale of oil, natural gas and natural gas liquids at any of the underlying properties will reduce trust distributions by reducing the amount of net proceeds available for distribution. For example, accidents may occur that result in personal injuries, property damage, damage to productive formations or equipment and environmental damages. Any costs incurred in connection with any such accidents that are not insured against will have the effect of reducing the net proceeds available for distribution to the trust. In addition, curtailments or damage to pipelines used to transport oil, natural gas and natural gas liquid production to markets for sale could reduce the amount of net proceeds available for distribution. Any such curtailment or damage to the gathering systems could also require finding alternative means to transport the oil, natural gas and natural gas liquid production from the underlying properties, which alternative means could result in additional costs that will have the effect of reducing net proceeds available for distribution.

The trust and the trust unitholders will have no voting or managerial rights with respect to the underlying properties. As a result, trust unitholders will have no ability to influence the operation of the underlying properties.

Oil and natural gas properties are typically managed pursuant to an operating agreement among the working interest owners of oil and natural gas properties. The typical operating agreement contains procedures whereby the owners of the working interests in the property designate one of the interest owners to be the operator of the property. Under these arrangements, the operator is typically responsible for making decisions relating to drilling activities, sale of production, compliance with regulatory requirements and other matters that affect the property. Neither the trustee nor the trust unitholders have any contractual ability to influence or control the field operations of, sale of oil and natural gas from the underlying properties. Also, the trust unitholders have no voting rights with respect to the operators of these properties and, therefore, will have no managerial, contractual or other ability to influence the activities of the operators of these properties.

Whiting has limited control over activities on certain of the underlying properties Whiting does not operate, which could reduce production from the underlying properties and cash available for distribution to trust unitholders.

Whiting Oil and Gas Corporation is currently designated as the operator of approximately 60.6% of the underlying properties based on the pre-tax PV10% value contained in the reserve report. However, for the 39.4% of the underlying properties that Whiting does not operate, Whiting does not have control over normal operating procedures or expenditures relating to such properties. The failure of an operator to adequately perform operations or an operator's breach of the applicable agreements could reduce production from the underlying properties and the cash available for distribution to trust unitholders. The success and timing of operational activities on properties operated by others therefore depends upon a number of factors outside of Whiting's control, including the operator's timing and amount of capital expenditures, expertise and financial resources, inclusion of other participants in drilling wells, and use of technology. Because Whiting does not have a majority interest in most of the non-operated properties comprising the underlying properties, Whiting may not be in a position to remove the operator in the event of poor performance.

Shortages or increases in costs of oil field equipment, services and qualified personnel could reduce the amount of cash available for distribution.

The demand for qualified and experienced field personnel to conduct field operations, geologists, geophysicists, engineers and other professionals in the oil and natural gas industry can fluctuate significantly, often in correlation with oil and natural gas prices, causing periodic shortages. Historically, there have been shortages of drilling rigs and other oilfield equipment as demand for rigs and equipment has increased along

Table of Contents

with the number of wells being drilled. These factors also cause significant increases in costs for equipment, services and personnel. Higher oil and natural gas prices generally stimulate demand and result in increased prices for drilling rigs, crews and associated supplies, equipment and services. Shortages of field personnel and equipment or price increases could significantly decrease the amount of cash available for distribution to the trust unitholders, or restrict operations on the underlying properties.

Market conditions or operational impediments may hinder access to oil and natural gas markets or delay production.

Market conditions or a lack of satisfactory oil and natural gas transportation arrangements may hinder access to oil and natural gas markets or delay production. The availability of a ready market for oil and natural gas production depends on a number of factors, including the demand for and supply of oil and natural gas and the proximity of reserves to pipelines and terminal facilities. The ability to market production depends substantially on the availability and capacity of gathering systems, pipelines and processing facilities owned and operated by third-parties. The failure to obtain such services on acceptable terms could materially reduce production from the underlying properties and the cash available for distribution to trust unitholders. Wells may be required to be shut in for a lack of a market or because access to natural gas pipelines, gathering systems or processing facilities may be limited or unavailable. If that were to occur, then production would be unrealized from those wells included in the underlying properties until production arrangements were made to deliver the production to market.

Whiting is not required to make capital expenditures on the underlying properties at historical levels or at all. If Whiting does not make capital expenditures, then the timing of production from the underlying properties may not be accelerated.

Whiting has made capital expenditures on the underlying properties in the amounts set forth in The Underlying Properties Historical Results of the Underlying Properties, which have increased production from the underlying properties. Although Whiting plans to make capital expenditures for recompletions and development it deems attractive to increase production on the underlying properties without regard to the burden of the net profits interest on the underlying properties, Whiting has no contractual obligation to do so. In addition, some of the historical capital expenditures related to properties that Whiting recently acquired will no longer require historical levels of capital expenditures. Furthermore, for properties on which Whiting is not designated as the operator, the decision whether to make capital expenditures is made by the operator and Whiting has no control over the timing or amount of those capital expenditures. Whiting also has the right to non-consent and not participate in the capital expenditures on these properties, in which case Whiting and the trust will not receive the production resulting from such capital expenditures. Accordingly, it is likely that capital expenditures with respect to the underlying properties will vary from and may be less than historical levels.

Whiting may abandon individual wells or properties that it reasonably believes to be uneconomic.

Whiting will be required under the applicable conveyance to act as a reasonably prudent operator in the state where the underlying properties are located under the same or similar circumstances would act if it were acting with respect to its own properties, disregarding the existence of the net profits interest as a burden on such property. However, under such standards, Whiting may abandon any well if it reasonably believes that the well can no longer produce oil or natural gas in commercially economic quantities. This could result in termination of the net profits interest relating to the abandoned well.

The reserves attributable to the underlying properties are depleting assets and production from those reserves will diminish over time. Furthermore, the trust is precluded from acquiring other oil and natural gas properties or net profits interests to replace the depleting assets and production.

The net proceeds payable to the trust from the net profits interest are derived from the sale of oil, natural gas and natural gas liquids produced from the underlying properties and proceeds, if any, received by Whiting upon settlement of the hedge contracts. The reserves attributable to the underlying properties are depleting

Table of Contents

assets, which means that the reserves attributable to the underlying properties will decline over time. As a result, the quantity of oil and natural gas produced from the underlying properties is expected to decline over time. Based on the reserve report, production attributable to the underlying properties is expected to decline at an average year over year rate of approximately 11% between 2008 and 2017. However, cash distributions to unitholders may decline at a faster rate than the rate of production due to fixed and semi-variable costs attributable to the underlying properties. Also, the anticipated rate of decline is an estimate and actual decline rates will likely vary from those estimated. The net profits interest will terminate at the time when 9.04 MMBOE have been produced from the underlying properties and sold (which amount is the equivalent of 8.14 MMBOE in respect of the trust's right to receive 90% of the net proceeds from such reserves pursuant to the net profits interest).

Future maintenance projects on the underlying properties beyond those which are currently estimated may affect the quantity of proved reserves that can be economically produced from the underlying properties. The timing and size of these projects will depend on, among other factors, the market prices of oil, natural gas and natural gas liquids. If operators of the underlying properties do not implement required maintenance projects when warranted, the future rate of production decline of proved reserves may be higher than the rate currently expected by Whiting or estimated in the reserve report. In addition Whiting is not required to make any capital expenditures.

The trust agreement will provide that the trust's business activities will be limited to owning the net profits interest and any activity reasonably related to such ownership, including activities required or permitted by the terms of the conveyance related to the net profits interest. As a result, the trust will not be permitted to acquire other oil and natural gas properties or net profits interests to replace the depleting assets and production attributable to the net profits interest.

Because the net proceeds payable to the trust are derived from the sale of depleting assets, the portion of the distributions to unitholders attributable to depletion should be considered a return of capital as opposed to a return on investment. Eventually, the net profits interest may cease to produce in commercial quantities and the trust may, therefore, cease to receive any distributions of net proceeds therefrom.

The amount of cash available for distribution by the trust will be reduced by the amount of any royalties, lease operating expenses, production and property taxes, maintenance expenses, postproduction costs and producing overhead, and payments made with respect to the hedge contracts.

Production costs on the underlying properties are deducted in the calculation of the trust's share of net proceeds. In addition, production and property taxes and any costs or payments associated with post-production costs will be deducted in the calculation of the trust's share of net proceeds. Accordingly, higher or lower production expenses, taxes and post-production costs will directly decrease or increase the amount received by the trust in respect of its net profits interest. For a summary of these costs for the last three years, see The Underlying Properties. Historical costs may not be indicative of future costs. The amount of net proceeds subject to the net profits interest will also be reduced by all payments made by Whiting to hedge contract counterparties upon settlement of the hedge contracts.

If production costs of the underlying properties and payments made by Whiting to hedge contract counterparties exceed the proceeds of production, the trust will not receive net proceeds until future proceeds from production exceed the total of the excess costs plus accrued interest during the deficit period.

If the payments received by Whiting under the hedge contracts and certain other non-production revenue exceed operating expenses during a quarterly period, then the ability to use such excess amounts to offset operating expenses will be deferred until the next quarterly period when such amounts are less than such expenses.

If the hedge payments received by Whiting and certain other non-production revenue exceed the operating expenses during a quarterly period, the ability to use such excess amounts to offset operating expenses will be deferred until the next quarterly period when such amounts are less than such expenses. If such amounts are deferred, then the applicable quarterly distribution will be less than it would have otherwise been.

Table of Contents

However, if any excess amounts have not been used to offset costs at the time when 9.04 MMBOE have been produced from the underlying properties and sold, which is the time when the net profits interest will terminate, then unitholders will not be entitled to receive the benefit of such excess amounts. Such a scenario could occur if oil and natural gas prices decline significantly during the first five years of the net profits interest and remained low for the remainder of the term.

An increase in the differential between the NYMEX or other benchmark price of oil and natural gas and the wellhead price received could reduce cash distributions by the trust and the value of trust units.

The prices received for our oil and natural gas production usually trade at a discount to the relevant benchmark prices, such as NYMEX, that are used for calculating hedge positions. The difference between the benchmark price and the price received is called a differential. The differential may vary significantly due to market conditions, the quality and location of production and other factors. Whiting cannot accurately predict oil and natural gas differentials. Increases in the differential between the benchmark price for oil and natural gas and the wellhead price received could reduce cash distributions by the trust and the value of the trust units.

Under certain circumstances, the trust provides that the trustee may be required to sell the net profits interest and dissolve the trust prior to the expected termination of the trust. As a result, trust unitholders may not recover their investment.

The trustee must sell the net profits interest if the holders of a majority of the trust units approve the sale or vote to dissolve the trust. The trustee must also sell the net profits interest if the annual gross proceeds attributable to the net profits interest are less than \$1.0 million for each of any two consecutive years. The sale of the net profits interest will result in the dissolution of the trust. The net proceeds of any such sale will be distributed to the trust unitholders.

The net profits interest will terminate at the time when 9.04 MMBOE have been produced from the underlying properties and sold (which amount is the equivalent of 8.14 MMBOE in respect of the trust's right to receive 90% of the net proceeds from such reserves pursuant to the net profits interest). The trust unitholders will not be entitled to receive any net proceeds from the sale of production from the underlying properties following the termination of the net profits interest. Therefore, the market price of the trust units will likely diminish towards the end of the term of the net profits interest because the cash distributions from the trust will cease at the termination of such net profits interest and the trust will have no right to any additional production from the underlying properties after the term of the net profits interest.

The disposal by Whiting of its remaining trust units may reduce the market price of the trust units.

Whiting will own 21.7% of the trust units after this offering, or 10% if the underwriters' option to purchase additional trust units is exercised in full. If Whiting sells these units, then the market price of the trust units may be reduced. See Selling Trust Unitholder. Whiting has entered into a lock-up agreement that prohibits it from selling any trust units for a period of 180 days after the date of this prospectus without the consent of Raymond James & Associates, Inc., acting as representative of the several underwriters. See Underwriting. In connection with the closing of this offering, Whiting and the trust intend to enter into a registration rights agreement pursuant to which the trust will agree to file a registration statement or shelf registration statement to register the resale of the remaining trust units held by Whiting and any transferee of the trust units upon request by such holders. See Trust Units Eligible for Future Sale Registration Rights.

There has been no public market for the trust units and no independent appraisal of the value of the net profits interest has been performed.

The number of trust units to be delivered to Whiting in exchange for the net profits interest and the initial public offering price of the trust units will be determined by negotiation among Whiting and the underwriters. Among the factors to be considered in determining such number of trust units and the initial public offering price, in addition to prevailing market conditions, will be current and historical oil and natural gas prices,

Table of Contents

current and prospective conditions in the supply and demand for oil and natural gas, reserve and production quantities estimated for the net profits interest and the trust's estimated cash distributions. None of Whiting, the trust or the underwriters will obtain any independent appraisal or other opinion of the value of the net profits interest other than the reserve report prepared by Cawley, Gillespie & Associates, Inc.

The market price for the trust units may not reflect the value of the net profits interest held by the trust.

The trading price for publicly traded securities similar to the trust units tends to be tied to recent and expected levels of cash distributions. The amounts available for distribution by the trust will vary in response to numerous factors outside the control of the trust, including prevailing prices for sales of oil, natural gas and natural gas liquid production attributable to the underlying properties. Consequently, the market price for the trust units may not necessarily be indicative of the value that the trust would realize if it sold the net profits interest to a third-party buyer. In addition, such market price may not necessarily reflect the fact that since the assets of the trust are depleting assets, a portion of each cash distribution paid on the trust units should be considered by investors as a return of capital, with the remainder being considered as a return on investment. As a result, distributions made to a unitholder over the life of these depleting assets may not equal or exceed the purchase price paid by the unitholder.

Conflicts of interest could arise between Whiting and the trust unitholders.

The interests of Whiting and the interests of the trust and the trust unitholders with respect to the underlying properties could at times differ. For example, Whiting has the right, subject to significant limitations as described herein, to cause the trust to release a portion of the net profits interest in connection with a sale of a portion of the oil and natural gas properties comprising the underlying properties to which such net profits interest relates. In such an event, the trust is entitled to receive its proportionate share of the proceeds from the sale attributable to the net profits interest released. See *The Underlying Properties* *Abandonment of Underlying Properties*. Except for specified matters that require approval of the trust unitholders described in *Description of the Trust Agreement*, the documents governing the trust do not provide a mechanism for resolving these conflicting interests.

The trust is managed by a trustee who cannot be replaced except at a special meeting of trust unitholders.

The business and affairs of the trust will be managed by the trustee. The voting rights of a trust unitholder are more limited than those of stockholders of most public corporations. For example, there is no requirement for annual meetings of trust unitholders or for an annual or other periodic re-election of the trustee. The trust agreement provides that the trustee may only be removed and replaced by the holders of a majority of the outstanding trust units at a special meeting of trust unitholders called by either the trustee or the holders of not less than 10% of the outstanding trust units. Immediately following the closing of this offering, Whiting will own approximately 21.7% of the outstanding trust units (or 10% if the underwriters exercise in full their option to purchase up to an additional trust units from Whiting). As a result, it may be difficult to remove or replace the trustee without the approval of Whiting.

Trust unitholders have limited ability to enforce provisions of the net profits interest.

The trust agreement permits the trustee to sue Whiting on behalf of the trust to enforce the terms of the conveyance creating the net profits interest. If the trustee does not take appropriate action to enforce provisions of the conveyance, your recourse as a trust unitholder would be limited to bringing a lawsuit against the trustee to compel the trustee to take specified actions. The trust agreement expressly limits the trust unitholders' ability to directly sue Whiting or any other third party other than the trustee. As a result, the unitholders will not be able to sue Whiting to enforce these rights.

Table of Contents

Courts outside of Delaware may not recognize the limited liability of the trust unitholders provided under Delaware law.

Under the Delaware Statutory Trust Act, trust unitholders will be entitled to the same limitation of personal liability extended to stockholders of private corporations under the General Corporation Law of the State of Delaware. Courts in jurisdictions outside of Delaware, however, may not give effect to such limitation.

The operations of the underlying properties may result in significant costs and liabilities with respect to environmental and operational safety matters, which could reduce the amount of cash available for distribution to trust unitholders.

Significant costs and liabilities can be incurred as a result of environmental and safety requirements applicable to the oil and natural gas exploration, development and production activities of the underlying properties. These costs and liabilities could arise under a wide range of federal, state and local environmental and safety laws, regulations, and enforcement policies, which legal requirements have tended to become increasingly strict over time. Failure to comply with these laws and regulations may result in the assessment of administrative, civil and criminal penalties, imposition of cleanup and site restoration costs and liens, and to a lesser extent, issuance of injunctions to limit or cease operations. In addition, claims for damages to persons, property or natural resources may result from environmental and other impacts on the operations of the underlying properties.

Strict, joint and several liability may be imposed under certain environmental laws and regulations, which could result in liability for the conduct of others or for the consequences of one's own actions that were in compliance with all applicable laws at the time those actions were taken. New laws, regulations or enforcement policies could be more stringent and impose unforeseen liabilities or significantly increase compliance costs. If it were not possible to recover the resulting costs for such liabilities or non-compliance through insurance or increased revenues, then these costs could have a material adverse effect on the cash distributions to the trust unitholders. Please read "The Underlying Properties - Environmental Matters and Regulation" for more information.

The operations of the underlying properties are subject to complex federal, state, local and other laws and regulations that could adversely affect the cash distributions to the trust unitholders.

The development and production operations of the underlying properties are subject to complex and stringent laws and regulations. In order to conduct the operations of the underlying properties in compliance with these laws and regulations, Whiting and the other operators must obtain and maintain numerous permits, approvals and certificates from various federal, state, local and governmental authorities. Whiting and the other operators may incur substantial costs and experience delays in order to maintain compliance with these existing laws and regulations, which could decrease the cash distributions to the trust unitholders. In addition, the costs of compliance may increase or the operations of the underlying properties may be otherwise adversely affected if existing laws and regulations are revised or reinterpreted, or if new laws and regulations become applicable to such operations. Such costs could have a material adverse effect on the cash distributions to the trust unitholders.

The operations of the underlying properties are subject to federal, state and local laws and regulations as interpreted and enforced by governmental authorities possessing jurisdiction over various aspects of the exploration for, and the production of, oil and natural gas. Failure to comply with such laws and regulations, as interpreted and enforced, could have a material adverse effect on the cash distributions to the trust unitholders. Please read "The Underlying Properties - Environmental Matters and Regulation."

Table of Contents

The trust has not requested a ruling from the IRS regarding the tax treatment of ownership of the trust units. If the IRS were to determine (and be sustained in that determination) that the trust is not a grantor trust for federal income tax purposes, or that the net profits interest is not a debt instrument for federal income tax purposes, the trust unitholders may receive different and less advantageous tax treatment from that described in this prospectus.

If the net profits interest were not treated as a debt instrument, the deductions allowed to an individual trust unitholder in their recovery of basis in the net profits interest may be itemized deductions, the deductibility of which would be subject to limitations that may or may not apply depending upon the unitholder's circumstances. See Federal Income Tax Consequences.

Neither Whiting nor the trustee has requested a ruling from the IRS regarding these tax questions, and neither Whiting nor the trust can assure you that such a ruling would be granted if requested or that the IRS will not challenge this position on audit.

Trust unitholders should be aware of the possible state tax implications of owning trust units. See State Tax Considerations.

The trust's net profits interest may be characterized as an executory contract in bankruptcy, which could be rejected in bankruptcy, thus relieving Whiting from its obligations to make payments to the trust with respect to the net profits interest.

Whiting will record the conveyance of the net profits interest in the states where the underlying properties are located in the real property records in each county where these properties are located. Oil and natural gas leases are real property interests under the laws of the states where the underlying properties are located. The net profits interest is a non-operating, non-possessory interest carved out of the oil and natural gas leasehold estate, but certain jurisdictions have not directly determined whether a net profits interest is a real or a personal property interest. Whiting believes that the delivery and recording of the conveyance will constitute a fully conveyed and vested property interest in the trust under the applicable state's laws. If in a bankruptcy proceeding in which Whiting becomes involved as a debtor a determination were made that the conveyance constitutes an executory contract and the net profits interest is not a fully conveyed property interest under the laws of the applicable state, and if such contract were not to be assumed in a bankruptcy proceeding involving Whiting, the trust would be treated as an unsecured creditor of Whiting with respect to such net profits interest in the pending bankruptcy proceeding. Please read The Underlying Properties Title to Properties for more information.

If the financial position of Whiting degrades in the future, Whiting may not be able to satisfy its obligations to the trust.

Whiting operates approximately 60.6% of the underlying properties based on the pre-tax PV10% value. The conveyance provides that Whiting will be obligated to market, or cause to be marketed, the production related to underlying properties for which it operates. In addition, Whiting is obligated to use the proceeds it receives upon the settlement of the hedge contracts to offset operating expenses relating to the underlying properties, with certain restrictions, as discussed in more detail in Computation of Net Proceeds.

Whiting has entered into hedge contracts, consisting of costless collar arrangements, with institutional counterparties to reduce the exposure of the revenue from oil and natural gas production from the underlying properties to fluctuations in crude oil and natural gas prices in order to achieve more predictable cash flow. The crude oil and natural gas collar arrangements will settle based on the average of the settlement price for each commodity business day in the contract period. In a collar arrangement, the counterparty is required to make a payment to Whiting for the difference between the fixed floor price and the settlement price if the settlement price is below the fixed floor price.

Whiting is required to make a payment to the counterparty for the difference between the fixed ceiling price and the settlement price if the settlement price is above the fixed ceiling price. For a detailed description of the terms of these hedge contracts, please read [The Underlying Properties](#) [Hedge Contracts](#).

Table of Contents

The ability of Whiting to perform its obligations related to the operation of the underlying properties, its obligations to counterparties related to the hedge contracts and its obligations to the trust with respect to the hedge contracts will depend on Whiting's future financial condition and economic performance, which in turn will depend upon the supply and demand for oil and natural gas, prevailing economic conditions and upon financial, business and other factors, many of which are beyond the control of Whiting. See "Where You Can Find More Information" in this prospectus for information about the documents Whiting incorporates by reference into this prospectus that contain additional information relating to Whiting, including information relating to the business of Whiting, historical financial statements of Whiting and other financial information relating to Whiting.

The trust's receipt of payments based on the hedge contracts depends upon the financial position of the hedge contract counterparties and Whiting. A default by any of the hedge contract counterparties could reduce the amount of cash available for distribution to the trust unitholders.

In the event that any of the counterparties to the hedge contracts default on their obligations to make payments to Whiting under the hedge contracts, the cash distributions to the trust unitholders would likely be materially reduced as the hedge payments are intended to provide additional cash to the trust during periods of lower crude oil and natural gas prices.

Table of Contents

FORWARD-LOOKING STATEMENTS

This prospectus contains forward-looking statements about Whiting and the trust that are subject to risks and uncertainties. All statements other than statements of historical fact included in this document, including, without limitation, statements under Prospectus Summary and Risk Factors regarding the financial position, business strategy, production and reserve growth, and other plans and objectives for the future operations of Whiting and the trust are forward-looking statements. Such statements may be influenced by factors that could cause actual outcomes and results to differ materially from those projected. Forward-looking statements are subject to risks and uncertainties and include statements made in this prospectus under Projected Cash Distributions, statements pertaining to operational activities and costs, and other statements in this prospectus that are prospective and constitute forward-looking statements.

When used in this document, the words believes, expects, anticipates, projects, intends or similar expressions are intended to identify such forward-looking statements. The following important factors, in addition to those discussed elsewhere in this prospectus, could affect the future results of the energy industry in general, and Whiting and the trust in particular, and could cause actual results to differ materially from those expressed in such forward-looking statements:

- the effect of changes in commodity prices and conditions in the capital markets;
- uncertainty of estimates of oil and natural gas reserves and production;
- risks incident to the operation of oil and natural gas wells;
- future production costs;
- the inability to access oil and natural gas markets due to market conditions or operational impediments;
- failure of the underlying properties to yield oil or natural gas in commercially viable quantities;
- the effect of existing and future laws and regulatory actions;
- competition from others in the energy industry;
- risks arising out of the hedge contracts; and
- inflation.

This prospectus describes other important factors that could cause actual results to differ materially from expectations of Whiting and the trust, including under the heading Risk Factors. All written and oral forward-looking statements attributable to Whiting or the trust or persons acting on behalf of Whiting or the trust are expressly qualified in their entirety by such factors.

Table of Contents

USE OF PROCEEDS

Prior to the closing of this offering, Whiting Petroleum Corporation's wholly-owned subsidiaries, Whiting Oil and Gas Corporation and Equity Oil Company, will convey the net profits interest to the trust in consideration for the issuance by the trust of trust units, which will be distributed as a dividend to Whiting Petroleum Corporation. Whiting will pay underwriting discounts and expenses of approximately \$ million associated with this offering and will receive all net proceeds from the offering. The estimated net proceeds to Whiting will be approximately \$ million, assuming an offering price of \$ per trust unit, and will increase to approximately \$ million if the underwriters exercise their option to purchase additional trust units in full. Whiting intends to use the net proceeds from this offering to repay a portion of the debt outstanding under its credit agreement. Borrowings under its credit agreement had a weighted average interest rate of 6.4% as of September 30, 2007 and mature in August 2010.

Table of Contents

THE TRUST

The trust is a statutory trust created under the Delaware Statutory Trust Act in October 2007. The business and affairs of the trust will be managed by The Bank of New York Trust Company, N.A., as trustee. Whiting has no ability to manage or influence the operations of the trust. In addition, Wilmington Trust Company will act as Delaware trustee of the trust. The Delaware trustee will have only minimal rights and duties as are necessary to satisfy the requirements of the Delaware Statutory Trust Act. In connection with the completion of this offering, Whiting Petroleum Corporation's wholly-owned subsidiaries, Whiting Oil and Gas Corporation and Equity Oil Company, will convey the net profits interest to the trust in consideration for the issuance by the trust of trust units, which will be distributed as a dividend to Whiting Petroleum Corporation. The first quarterly distribution is expected to be made on or prior to February 29, 2008 to trust unitholders owning trust units on February 19, 2008. The trust's first quarterly distribution will consist of an amount in cash paid by Whiting equal to the amount that would have been payable to the trust had the net profits interest been in effect during the period from October 1, 2007 through December 31, 2007. The trust's second quarterly distribution will consist of an amount in cash paid by Whiting equal to the amount that would have been payable to the trust had the net profits interest been in effect during the period from January 1, 2008 through the day prior to close of this offering plus the amount payable under the net profits interest for the period from the day of closing of the offering through March 31, 2008.

The trustee can authorize the trust to borrow money to pay trust administrative or incidental expenses that exceed cash held by the trust. The trustee may authorize the trust to borrow from the trustee as a lender provided the terms of the loan are fair to the trust unitholders. The trustee may also deposit funds awaiting distribution in an account with itself, if the interest paid to the trust at least equals amounts paid by the trustee on similar deposits, and make other short-term investments with the funds distributed to the trust.

The trust will pay the trustee an administrative fee of \$160,000 per year. The trust will pay the Delaware trustee a fee of \$3,500 per year. The trust will also incur legal, accounting, tax and engineering fees, printing costs and other expenses that are deducted by the trust before distributions are made to trust unitholders. Total administrative expenses of the trust for 2008 are expected to be approximately \$900,000, including the administrative services fee payable to Whiting.

The net profits interest will terminate at the time when 9.04 MMBOE have been produced from the underlying properties and sold (which amount is the equivalent of 8.14 MMBOE in respect of the trust's right to receive 90% of the net proceeds from such reserves pursuant to the net profits interest), and the trust will soon thereafter wind up its affairs and terminate.

Administrative Services Agreement

In connection with the closing of this offering, the trust has entered into an administrative services agreement with Whiting that obligates the trust, throughout the term of the trust, to pay to Whiting each quarter an administrative services fee for accounting, bookkeeping and informational services to be performed by Whiting on behalf of the trust relating to the net profits interest. The annual fee, payable in equal quarterly installments, will total \$200,000. The administrative services agreement will terminate upon the termination of the net profits interest unless earlier terminated by mutual agreement of the trustee and Whiting.

Table of Contents

PROJECTED CASH DISTRIBUTIONS

Immediately prior to the closing of this offering, Whiting will create the term net profits interest through a conveyance to the trust of a term net profits interest carved from Whiting's interests in certain oil and natural gas producing properties, which properties are located primarily in the Rocky Mountains, Mid-Continent, Permian Basin and Gulf Coast regions of the United States. The net profits interest will entitle the trust to receive 90% of the net proceeds from the sale of production of oil, natural gas and natural gas liquids attributable to the underlying properties until the time when 9.04 MMBOE have been produced from the underlying properties and sold (which amount is the equivalent of 8.14 MMBOE in respect of the trust's right to receive 90% of the net proceeds from such reserves pursuant to the net profits interest).

The amount of trust revenues and cash distributions to trust unitholders will depend on, among other things:

oil prices and natural gas prices;

the volume of oil, natural gas and natural gas liquids produced and sold;

the settlement prices of the hedge contracts;

property and production taxes;

production and post-production costs; and

administrative expenses of the trust.

Projected Cash Distributions

The following table sets forth a projection of cash distributions on a quarterly and annual basis to holders of trust units who own trust units as of the record date for the distribution related to oil, natural gas and natural gas liquid production for the first quarter of 2008 and continue to own those trust units through the record date for the cash distribution payable with respect to oil, natural gas and natural gas liquid production for the last quarter of 2008. The table also reflects the methodology for calculating the projected cash distribution. The cash distribution projections were prepared by Whiting for each of the four quarters in 2008 and the twelve months ending December 31, 2008, on an accrual of production basis based on the hypothetical assumptions that are described in Significant Assumptions Used to Prepare the Projected Cash Distributions below. Actual cash distributions will be on a cash basis and may vary from those presented.

Whiting does not as a matter of course make public projections as to future sales, earnings, or other results. However, the management of Whiting has prepared the prospective financial information set forth below to present the projected cash distributions to the holders of the trust units based on the estimates and hypothetical assumptions described below. The accompanying prospective financial information was not prepared with a view toward public disclosure or with a view toward complying with the guidelines established by the American Institute of Certified Public Accountants with respect to prospective financial information, but, in the view of Whiting's management, was prepared on a reasonable basis, reflects the best currently available estimates and judgments, and presents, to the best of management's knowledge and belief, the expected course of action and the expected future financial performance of the net profits interest. However, this information is not fact and should not be relied upon as being indicative of future results, and readers of this prospects are cautioned not to place undue reliance on the prospective financial information.

Neither Whiting's independent auditors, nor any other independent accountants, have compiled, examined, or performed any procedures with respect to the prospective financial information contained herein, nor have they expressed any opinion or any other form of assurance on such information or its achievability, and assume no responsibility for, and disclaim any association with, the prospective financial information.

Table of Contents

In the view of Whiting's management, the accompanying unaudited projected financial information was prepared on a reasonable basis and reflects the best currently available estimates and judgments of Whiting related to oil, natural gas and natural gas liquid production, operating expenses and capital expenses, based on:

the oil, natural gas and natural gas liquid production estimates contained in the reserve report; and

any royalties, lease operating expenses, production and property taxes, maintenance expenses, postproduction costs and producing overhead, and payments made and costs with respect to the hedge contracts for the twelve months ending December 31, 2008.

The projected financial information was also based on the hypothetical assumption that prices for oil, natural gas and natural gas liquids remain constant during the twelve months ending December 31, 2008, at a price that equals 80% of the NYMEX futures prices for oil and natural gas on _____, 2008 plus 20% of the Bloomberg consensus price forecasts on _____, 2008 for oil and natural gas for 2008. The NYMEX futures prices on _____, 2008 were \$ _____ per Bbl of oil and \$ _____ per Mcf of natural gas and the Bloomberg consensus price forecasts were \$ _____ per Bbl of oil and \$ _____ per Mcf of natural gas on _____, 2008, which equals blended prices of \$ _____ per Bbl of oil and \$ _____ Mcf of natural gas. Because there is no hedge in place or Bloomberg consensus price for natural gas liquids, Whiting used a hypothetical price equal to approximately 66% of the price used in the projected cash distribution table for oil, which is consistent with the historical pricing realized by Whiting for natural gas liquids and is the methodology used in the reserve report. These hypothetical prices were adjusted to take into account Whiting's estimate of the basis differential (based on location and quality of the production) between published commodity prices and the prices actually received by Whiting. Actual prices paid for oil, natural gas and natural gas liquids expected to be produced from the underlying properties in 2008 will likely differ from these hypothetical prices due to fluctuations in the prices generally experienced with respect to the production of oil, natural gas and natural gas liquids, and such prices may be higher or lower than utilized for purposes of the projected financial information. For example, the published average monthly closing NYMEX crude oil spot price per Bbl was \$66.12 for the nine months ended September 30, 2007, with the monthly closing prices ranging from \$54.67 to \$79.63 during such period. See Risk Factors The amounts of the cash distributions by the trust are subject to fluctuation as a result of changes in oil, natural gas and natural gas liquid prices.

Whiting utilized these production estimates, hypothetical oil, natural gas and natural gas liquid prices and cost estimates in preparing the projected financial information. This methodology is consistent with the requirements of the SEC for estimating oil, natural gas and natural gas liquid reserves and discounted present value of future net revenues attributable to the net profits interest, other than the use of the NYMEX futures prices for oil and natural gas on _____, 2008 and Bloomberg consensus price forecasts rather than the use of constant prices based on the prices in effect at the time of the reserve estimate as required by the rules and regulations of the SEC. The actual production amounts, commodity prices and costs for 2008, however, are not known for certain.

The projections and the estimates and hypothetical assumptions on which they are based are subject to significant uncertainties, many of which are beyond the control of Whiting or the trust. **Actual cash distributions to trust unitholders, therefore, could vary significantly based upon events or conditions occurring that are different from the events or conditions assumed to occur for purposes of these projections.** Cash distributions to trust unitholders will be particularly sensitive to fluctuations in oil, natural gas and natural gas liquid prices. See Risk Factors The amounts of the cash distributions by the trust are subject to fluctuation as a result of changes in oil, natural gas and natural gas liquid prices and Projected Cash Distributions Sensitivity of Projected Cash Distributions to Oil, Natural Gas and Natural Gas Liquid Production and Prices, which shows projected effects on cash distributions from hypothetical changes in oil and natural gas prices. **As a result of typical production declines for oil and natural gas properties, production estimates generally decrease from year to year, and the projected cash distributions shown in the table below are not indicative of distributions for future years.** See Sensitivity of

Projected Cash Distributions to Oil, Natural Gas and Natural Gas Liquid Production and Prices below, which shows projected

Table of Contents

effects on cash distributions from hypothetical changes in oil and natural gas production. Because payments to the trust will be generated by depleting assets and the trust has a finite life with the production from the underlying properties diminishing over time, a portion of each distribution will represent a return of your original investment. Based on the reserve report, production attributable to the underlying properties is expected to decline at an average year over year rate of approximately 11% between 2008 and 2017. However, cash distributions to unitholders may decline at a faster rate than the rate of production due to fixed and semi-variable costs attributable to the underlying properties. See Risk Factors The reserves attributable to the underlying properties are depleting assets and production from those reserves will diminish over time. Furthermore, the trust is precluded from acquiring other oil and natural gas properties or net profits interests to replace the depleting assets and production.

- (1) The cash distribution projections were prepared by Whiting on an accrual of production basis based on hypothetical assumptions. Actual cash distributions will be on a cash basis and may vary from those presented. For more information about the hypothetical assumptions made in preparing the table above, see Significant Assumptions Used to Prepare the Projected Cash Distributions below.
- (2) Assumes trust units outstanding.

Sensitivity of Projected Cash Distributions to Oil, Natural Gas and Natural Gas Liquid Production and Prices

The amount of revenues of the trust and cash distributions to the trust unitholders will be directly dependent on the sales price for oil, natural gas and natural gas liquid production sold from the underlying properties, the volumes of oil, natural gas and natural gas liquids produced attributable to the underlying properties, payments made under the hedge contracts and, to some degree, the level of variations in lease operating expenses and production and property taxes. The tables below demonstrate the projected effect that hypothetical changes in the estimated oil and natural gas prices for 2008 and oil and natural gas production for 2008, as reflected in the reserve report, could have on cash distributions to the trust unitholders.

The tables and discussion below sets forth sensitivity analyses of annual cash distributions per trust unit for the twelve months ending December 31, 2008, on the accrual basis, on the assumption that a trust unitholder purchased a trust unit on January 1, 2008, and held such trust unit until the quarterly record date for distributions made with respect to oil, natural gas and natural gas liquid production in the last quarter of 2008, based upon (1) the assumption that a total of trust units are issued and outstanding after the closing of the offering made hereby; (2) an assumed purchase price of \$ per trust unit; (3) various realizations of production levels estimated in the reserve report; (4) the hypothetical commodity prices based upon the NYMEX futures prices for oil and natural gas on , 2008 and Bloomberg consensus price forecasts for oil and natural gas on , 2008; (5) the impact of the hedge contracts entered into by Whiting that relate to production from the underlying properties; and (6) other assumptions described below under Significant Assumptions Used to Prepare the Projected Cash Distributions. The hypothetical commodity prices of oil, natural gas and natural gas liquid production shown have been chosen solely for illustrative purposes. For a description of the effect of calculating annual cash distributions on an accrual basis rather than on a cash basis as prescribed in the conveyance of the net profits interest, see Significant Assumptions Used to Prepare the Projected Cash Distributions Timing of Actual Distributions.

The tables below are not a projection or forecast of the actual or estimated results from an investment in the trust units. The purpose of the tables below is to illustrate the sensitivity of cash distributions to changes in oil and natural gas production levels and changes in oil and natural gas prices. There is no assurance that the hypothetical assumptions described below will actually occur or that production or price levels will not change by amounts different from those shown in the tables.

Whiting has entered into certain hedge contracts related to the oil and natural gas production from the underlying properties for the period from January 1, 2008 through December 31, 2012. These hedge contracts are costless collar arrangements that hedge approximately 80% of the anticipated production attributable to the underlying properties at prices ranging from \$ to \$ per Bbl of oil and at prices ranging from \$ to \$ per Mcf of natural gas. Whiting will not enter into any hedge contracts related to production from the underlying properties for periods after 2012 and, therefore, cash distributions for those periods are expected to fluctuate significantly as a result of changes in oil and natural gas prices after that time. See Risk Factors for a discussion of various items that could impact production levels and the prices of oil and natural gas.

Table of Contents

The purpose of the table below is to illustrate the sensitivity of cash distributions to changes in oil and natural gas production levels, excluding the impact of any price differences for production of oil and natural gas from the prices forecasted. The table below is not a projection or forecast of the actual or estimated results from an investment in the trust units.

Sensitivity of Total 2008 Projected Cash Distributions Per Trust Unit to Changes in Natural Gas and Oil Production

Percentage of 2008 Estimated Oil and Natural Gas Production(1)	Total 2008 Projected Cash Distributions Per Trust Unit
90%	\$
95%	\$
100%	\$
105%	\$
110%	\$

- (1) Estimated production is based on the reserve report and the sensitivity analysis assumes that oil and natural gas production will continue to represent the same percentage of total production as estimated for 2008 in the reserve report.

The purpose of the table below is to illustrate the sensitivity of cash distributions to changes in oil and natural gas prices, excluding the impact of any differences in the amount of production of oil and natural gas as estimated in the reserve report. The table below is not a projection or forecast of the actual or estimated results from an investment in the trust units.

Sensitivity of Total 2008 Projected Cash Distributions Per Trust Unit to Changes in Natural Gas and Oil Prices

90%	\$
95%	\$
100%	\$
105%	\$
110%	\$

- (1) Estimated prices are based on a price that equals 80% of the NYMEX futures prices for oil and natural gas on _____, 2008 plus 20% of the Bloomberg consensus price forecasts on _____, 2008 for oil and natural gas for 2008. The NYMEX futures prices on _____, 2008 were \$ _____ per Bbl of oil and \$ _____ per Mcf of natural gas and the Bloomberg consensus price forecasts were \$ _____ per Bbl of oil and \$ _____ per Mcf of natural gas on _____, 2008, which equals blended prices of \$ _____ per Bbl of oil and \$ _____ per Mcf of natural gas.

Significant Assumptions Used to Prepare the Projected Cash Distributions

Timing of Actual Distributions. In preparing the projected cash distributions and sensitivity analysis above, the revenues and expenses of the trust were calculated based on the terms of the conveyance creating the trust's net profits interest. These calculations are described under "Computation of Net Proceeds - Net Profits Interest," except that amounts for the projection and table above were calculated on an accrual of production basis rather than the cash basis prescribed by the conveyance. As a result of cash basis, the proceeds for production for a portion of the three months ended December 31, 2007 will actually enter into the calculation of net proceeds to be received by the trust in 2008. Net proceeds from production during the three months ended December 31, 2007, will in fact be distributed to the trust in 2008.

Table of Contents

Production Estimates. Production estimates for 2008 are based on the reserve report. The reserve report assumed constant prices at September 30, 2007, based on a crude oil price of \$81.66 (\$73.46 field adjusted) per Bbl, a natural gas price of \$6.15 (\$5.90 field adjusted) per Mcf and the natural gas liquid price of \$47.82 per Bbl. Production from the underlying properties for 2008 is estimated to be 791.6 MBbls of oil, 3,316.1 MMcf of natural gas and 45.1 MBbls of natural gas liquids. See Oil, Natural Gas and Natural Gas Liquid Prices below for a description of changes in production due to price variations. Net sales for the nine months ended September 30, 2007, on an accrual basis, were 667.1 MBbls of oil, 3,328.5 MMcf of natural gas and 49.5 MBbl of natural gas liquids. Net sales for the year ended December 31, 2006, on an accrual basis, were 891.0 MBbls of oil, 5,056.7 MMcf of natural gas and 55.4 MBbls of natural gas liquids. The projected decrease in estimated production for the projected period is primarily the result of normal production decline. Whiting expects annual production attributable to the underlying properties to decline at an average year over year rate of approximately 11% between 2008 and 2017. Differing levels of production will result in different levels of distributions and cash returns.

Oil, Natural Gas and Natural Gas Liquid Prices. Hypothetical oil and natural gas prices assumed in the projected cash distribution table are based on the NYMEX futures prices for oil and natural gas on , 2008 and Bloomberg consensus price forecasts for oil and natural gas on , 2008. Published NYMEX benchmark prices for crude oil are based upon an assumed light, sweet crude oil of a particular gravity that is stored in Cushing, Oklahoma while published NYMEX benchmark prices for natural gas are based upon delivery at the Henry Hub in Louisiana. These prices differ from the average or actual price received for production attributable to the underlying properties. Differentials between published oil and natural gas prices and the prices actually received for the oil and natural gas production may vary significantly due to market conditions, transportation costs and other factors.

In the above tables, \$8.23 per Bbl is deducted from the assumed sales price for crude oil in 2008 to reflect these differentials, which is the assumed differential used in the reserve report. This deduction is based on Whiting's estimate of the average difference between the NYMEX published price of crude oil and the price to be received by Whiting for production attributable to the underlying properties during 2008. The average difference between the NYMEX published price of crude oil and the price received by Whiting for oil production attributable to the underlying properties during the nine months ended September 30, 2007 was \$7.33 per Bbl. Pro forma average oil prices appearing in this prospectus have been adjusted for these differentials. Because there is no hedge in place or Bloomberg consensus price for natural gas liquids, Whiting used a hypothetical price equal to approximately 66% of the hypothetical price used in the projected cash distribution table for oil, which is consistent with the historical pricing realized by Whiting for natural gas liquids and is the methodology used in the reserve report.

In the cash distribution table, \$0.60 per Mcf is deducted from the assumed sales price for natural gas in 2008 to reflect these differentials, which is the average difference between the NYMEX published price of natural gas and the price received by Whiting for natural gas production attributable to the underlying properties during the nine months ended September 30, 2007. This deduction is based on Whiting's estimate of the average difference between the NYMEX published price of natural gas and the price to be received by Whiting for production attributable to the underlying properties during 2008.

The adjustments to published oil, natural gas and natural gas liquid prices applied in the above projected cash distribution estimate are based upon an analysis by Whiting of the historic price differentials for production from the underlying properties with consideration given to gravity, quality and transportation and marketing costs that may affect these differentials in 2008. There is no assurance that these assumed differentials will occur in 2008.

When oil, natural gas and natural gas liquid prices decline, the operators of the underlying properties may elect to reduce or completely suspend production. No adjustments have been made to estimated 2008 production to reflect potential reductions or suspensions of production.

Settlement of Hedge Contracts. The projected cash proceeds to the trust includes the impact of payments that would be made to settle the hedge contracts in 2008 based upon the hypothetical oil prices assumed in the

Table of Contents

projected cash distribution table. In addition, the cash distribution table includes the impact of the amounts payable to Whiting from hedge contract counterparties upon settlements of the hedge contracts. Whiting has entered into costless collar arrangements with respect to \$ Bbls of oil and \$ Mcf of natural gas expected to be produced from the underlying properties during 2008 at a weighted average price per Bbl of \$ and per Mcf of \$, respectively.

Costs. For 2008, Whiting estimates lease operating expenses to be \$ million and production and property taxes to be \$ million. For the nine months ended September 30, 2007, lease operating expenses were \$17.0 million and production taxes were \$4.4 million. For a description of production expenses, see Computation of Net Proceeds Net Profits Interest. Whiting expects its costs in 2008 to be substantially the same as its expected costs in 2007.

Administrative Expense. Trust administrative expense for 2008 is assumed to be \$900,000. See The Trust.

Table of Contents

THE UNDERLYING PROPERTIES

The underlying properties consist of Whiting's net interests in certain oil and natural gas producing properties as of the date of the conveyance of the net profits interest to the trust, which properties are located primarily in the Rocky Mountains, Mid-Continent, Permian Basin and Gulf Coast regions of the United States. The underlying properties include interests in approximately 3,000 producing oil and natural gas wells located in 173 fields on 195,616 gross acres in 14 states. Whiting has acquired interests in these properties through various acquisitions that have occurred during its 27 year existence. For the month ended September 30, 2007, the average daily net production from these properties was 4,508 BOE, which equates to 4,057 BOE to the net profits interest. Whiting operates approximately 60.6% of the underlying properties based on the pre-tax PV10% value.

Whiting's interests in the oil and natural gas properties comprising the underlying properties require Whiting to bear its proportionate share, along with the other working interest owners, of the costs of development and operation of such properties. Many of the properties comprising the underlying properties that are operated by Whiting are burdened by non-working interests owned by third parties, consisting primarily of royalty interests retained by the owners of the land subject to the working interests. These landowners' royalty interests typically entitle the landowner to receive at least 12.5% of the revenue derived from oil and natural gas production resulting from wells drilled on the landowner's land, without any deduction for drilling costs or other costs related to production of oil and natural gas. A working interest percentage represents a working interest owner's proportionate ownership interest in a property in relation to all other working interest owners in that property, whereas a net revenue interest percentage is a working interest owner's percentage of production after reducing such percentage by the percentage of burdens on such production such as royalties and overriding royalties.

As of September 30, 2007, proved reserves attributable to the underlying properties, as estimated in the reserve report, were approximately 13.18 MMBOE with a pre-tax PV10% value of \$243.5 million. The net profits interest entitles the trust to receive 90% of the net proceeds from the sale of production of 9.04 MMBOE of proved reserves. The 9.04 MMBOE represents the proved reserves attributable to the underlying properties that the reserve report projects to be produced by December 31, 2017. However, the exact rate of production cannot be predicted with certainty and such amount may be produced before or after that date. The reserves attributable to the underlying properties include all reserves expected to be economically produced during the life of the properties, whereas the trust is entitled to only receive 90% of the net proceeds from the sale of production of oil, natural gas and natural gas liquids attributable to the underlying properties during the term of the net profits interest.

Whiting's interest in the underlying properties after deducting the net profits interest entitles it to 10% of the net proceeds from the sale of production of oil, natural gas and natural gas liquids attributable to the underlying properties during the term of the net profits interest and all of the net proceeds thereafter. The trust units retained by Whiting, which represent 21.7% of the trust units following the closing of this offering, assuming no exercise of the underwriters' option to purchase additional trust units, are subject to lock-up arrangements. See "Trust Units Eligible for Future Sale" Lock-up Agreements. Whiting believes that its retained ownership interests in the underlying properties and its ownership of trust units, which together entitle Whiting to receive approximately 29.5% of the net proceeds from the underlying properties, assuming no exercise of the underwriters' option to purchase additional trust units, will provide incentive to operate (or cause to be operated) the underlying properties in an efficient and cost-effective manner. In addition, Whiting has agreed to operate these properties as a reasonably prudent operator in the same manner that it would operate if these properties were not burdened by the net profits interest and Whiting has agreed to use commercially reasonable efforts to cause the other operators to operate these properties in the same manner.

In general, the producing wells to which the underlying properties relate have established production profiles. Based on the reserve report, annual production from the underlying properties is expected to decline at an average year over

year rate of approximately 11% from 2008 through 2017. However, cash distributions to unitholders may decline at a faster rate than the rate of production due to fixed and semi-variable costs attributable to the underlying properties.

Table of Contents**Historical Results of the Underlying Properties**

The following table sets forth revenues, direct operating expenses and the excess of revenues over direct operating expenses relating to the underlying properties for the three years in the period ended December 31, 2006, and for the nine-month periods ended September 30, 2006 and 2007, derived from the underlying properties audited and unaudited statements of historical revenues and direct operating expenses included elsewhere in this prospectus. The unaudited statements were prepared on a basis consistent with the audited statements and, in the opinion of Whiting, include all adjustments (consisting only of normal recurring adjustments) necessary to present fairly the revenues, direct operating expenses and the excess of revenues over direct operating expenses relating to the underlying properties for the periods presented. The historical financial information includes the results of acquisitions beginning on the following dates: Equity Oil Company, July 20, 2004; Permian Basin Properties, September 23, 2004; Institutional Partnership Interests, June 23, 2005; Celero Energy, LP, October 4, 2005; and Howard Energy, August 3, 2006.

	Year ended December 31,			Nine months ended September 30,	
	2004	2005	2006	2006 (Unaudited)	2007 (Unaudited)
Revenues:					
Oil sales	\$ 30,539,666	\$ 43,498,823	\$ 53,232,066	\$ 41,058,591	\$ 41,148,501

Excess of revenues over direct operating expenses	\$ 39,190,773	\$ 57,850,949	\$ 56,710,511	\$ 44,943,776	\$ 40,566,957

The following table provides oil and natural gas sales volumes, average sales prices and capital expenditures relating to the underlying properties for the three years in the period ended December 31, 2006, and for the nine-month periods ended September 30, 2006 and 2007. Sales volumes for natural gas liquids are included with oil sales since they were not material. There were no hedges or other derivative activity attributable to the underlying properties during such periods. The historical financial information includes the results of acquisitions beginning on the following dates: Equity Oil Company, July 20, 2004; Permian Basin Properties, September 23, 2004; Institutional Partnership Interests, June 23, 2005; Celero Energy, LP, October 4, 2005; and Howard Energy, August 3, 2006.

	Year ended December 31,			Nine months ended September 30,

(1) Whiting cannot provide any assurance that future capital expenditures will be consistent with historical levels.

Discussion and Analysis of Historical Results of the Underlying Properties***Comparison of Results of the Underlying Properties for the Nine Months Ended September 30, 2007 and 2006***

Revenues. Oil and natural gas sales revenue decreased \$3.4 million to \$61.9 million in the first nine months of 2007 compared to the first nine months of 2006. Sales are a function of volumes sold and average sales prices. Oil sales volumes increased 2% primarily due to the acquisition of Howard Energy in August of 2006, while gas sales volumes decreased 13% between periods primarily due to normal field production decline. Average price for oil decreased 2% and its average price for natural gas decreased 1% between periods.

Lease Operating Expenses. Lease operating expenses increased \$1.3 million to \$17.0 million in the first nine months of 2007 compared to the first nine months of 2006 primarily due to the acquisition of Howard Energy in August of 2006. Lease operating expense as a percentage of oil and gas sales increased from 24% during the first nine months of 2006 to 27% during the first nine months of 2007. Lease operating expenses per BOE increased from \$11.67 during the first nine months of 2006 to \$13.33 during the first nine months of 2007. The increase of 14% on a BOE basis was primarily caused by inflation in the cost of oil field goods and services. The cost of oil field goods and services increased due to a higher demand in the industry.

Production Taxes. Production taxes are generally calculated as a percentage of oil and gas sales revenue. All credits and exemptions allowed in the various taxing jurisdictions are fully utilized. Production taxes for the first nine months of 2007 and 2006 were 7.1% of oil and gas sales.

Excess of Revenues Over Direct Operating Expenses. Excess of revenues over direct operating expenses decreased from \$44.9 million during the first nine months of 2006 to \$40.6 million during the first nine months of 2007. The primary reasons for this decrease included a 5% decrease in equivalent volumes sold, a 2% decrease in oil prices and a 1% decrease in gas prices between periods, and higher lease operating expense. The decreased production and pricing and increased lease operating expenses were partially offset by lower production taxes in the first nine months of 2007.

Comparison of Results of the Underlying Properties for the Year Ended December 31, 2006 Compared to Year Ended December 31, 2005

Revenues. Oil and natural gas sales revenue increased \$5.0 million to \$84.6 million in 2006 compared to 2005. Sales are a function of volumes sold and average sales prices. Oil sales volumes increased 6% primarily due to new property acquisitions during 2005 and 2006 and gas sales volumes decreased slightly between periods. Average price for oil increased 15% and its average price for natural gas decreased 13% between periods.

Lease Operating Expenses. Lease operating expense increased \$5.7 million to \$21.9 million in 2006 compared to 2005. The increase resulted primarily from costs associated with new property acquisitions during 2005 and 2006 and successful drilling activities over the past year. Lease operating expense as a percentage of oil and gas sales increased from 20% during 2005 to 26% during 2006, and lease operating expenses per BOE increased from \$9.30 during 2005 to \$12.25 during 2006. The increase of 32% on a BOE basis was primarily caused by inflation in the cost of oil field goods and services, a high level of workover activity and higher energy costs. Oil field goods and services increased due to a higher demand in the industry. Workovers amounted to \$1.7 million in 2006, as compared to \$0.7 million of workover activity during 2005.

Production Taxes. Production taxes are generally calculated as a percentage of oil and gas sales revenue. All credits and exemptions allowed in the various taxing jurisdictions are fully utilized. Production taxes for 2006 and 2005 were 7.1% and 7.0%, respectively, of oil and gas sales.

Table of Contents

Excess of Revenues Over Direct Operating Expenses. Excess of revenues over direct operating expenses decreased from \$57.9 million in 2005 to \$56.7 million for 2006. The primary reasons for this decrease included higher lease operating expenses and production taxes in 2006 resulting from continued growth, partially offset by a 3% increase in total production.

Comparison of Results of the Underlying Properties for the Year Ended December 31, 2005 Compared to Year Ended December 31, 2004

Revenues. Oil and natural gas sales revenue increased \$25.6 million to \$79.6 million in 2005 as compared to 2004. Sales are a function of volumes sold and average sales prices. Oil sales volumes increased 8% primarily due to recent acquisitions, and its gas sales volumes decreased 19% between periods primarily due to normal field production decline. Average price for crude oil increased 32% between periods and the average price for natural gas sales increased 29%.

Lease Operating Expenses. Lease operating expense increased \$5.3 million to \$16.2 million in 2005 compared to 2004. The increase resulted primarily from new property acquisitions during 2004 and 2005. Lease operating expenses per BOE increased from \$7.06 during 2004 to \$9.30 during 2005. The increase of 32% on a BOE basis was mainly caused by higher costs for electric power and increases in the cost of oil field goods and services due to higher demand in the industry.

Production Taxes. Production taxes are generally calculated as a percentage of oil and gas sales revenue. All credits and exemptions allowed by the various taxing jurisdictions are fully utilized. Production taxes for 2005 and 2004 were 7.0% and 7.3%, respectively, of oil and gas sales.

Excess of Revenues Over Direct Operating Expenses. Excess of revenues over direct operating expenses increased from \$39.2 million during 2004 to \$57.9 million during 2005. The primary reasons for this increase included 30% higher realized price between periods and a 13% increase in equivalent volumes sold, which were partially offset by higher lease operating expenses and production taxes in 2005 resulting from continued growth.

Hedge Contracts

The revenues derived from the underlying properties depend substantially on prevailing crude oil, natural gas and natural gas liquid prices. As a result, commodity prices also affect the amount of cash flow available for distribution to the trust unitholders. Lower prices may also reduce the amount of oil, natural gas and natural gas liquids that Whiting can economically produce. Whiting sells the oil, natural gas and natural gas liquid production from the underlying properties under floating market price contracts each month. Whiting has entered into the hedge contracts to reduce the exposure of the revenues from oil and natural gas production from the underlying properties from January 1, 2008 through December 31, 2012 to fluctuations in crude oil and natural gas prices and to achieve more predictable cash flow. However, these contracts limit the amount of cash available for distribution if prices increase. The hedge contracts consist of costless collar arrangements that will be placed with major trading counterparties who Whiting believes represent minimal credit risks. Whiting cannot provide assurance, however, that these trading counterparties will not become credit risks in the future.

The costless collar arrangements will settle based on the average of the settlement price for each commodity business day in the contract period. In a collar arrangement, the counterparty is required to make a payment to Whiting for the difference between the fixed floor price and the settlement price if the settlement price is below the fixed floor price. Whiting is required to make a payment to the counterparty for the difference between the fixed ceiling price and the settlement price if the settlement price is above the fixed

Table of Contents

ceiling price. From January 1, 2008 through December 31, 2012, Whiting's crude oil and natural gas price risk management positions in collar arrangements are as follows:

	Oil Collars		Natural Gas Collars	
	Volumes (Bbls)	Weight Average Price (per Bbl) Floor Ceiling	Volumes (Mcf)	Weighted Average Price (Per Mcf) Floor Ceiling
Year Ending December 31, 2008		\$ \$		\$ \$
Year Ending December 31, 2009		\$ \$		\$ \$
Year Ending December 31, 2010		\$ \$		\$ \$
Year Ending December 31, 2011		\$ \$		\$ \$
Year Ending December 31, 2012		\$ \$		\$ \$

The amounts received by Whiting from hedge contract counterparties upon settlements of the hedge contracts will reduce the operating expenses related to the underlying properties in calculating the net proceeds. However, if the hedge payments received by Whiting under the hedge contracts and other non-production revenue exceed operating expenses during a quarterly period, the ability to use such excess amounts to offset operating expenses will be deferred, with interest accruing on such amounts at the prevailing money market rate, until the next quarterly period where the hedge payments and the other non-production revenue are less than such expenses. In addition, the aggregate amounts paid by Whiting on settlement of the hedge contracts will reduce the amount of net proceeds paid to the trust. See "Computation of Net Proceeds" "Net Profits Interest."

Producing Acreage and Well Counts

For the following data, "gross" refers to the total wells or acres in the oil and natural gas properties in which Whiting owns a working interest and "net" refers to gross wells or acres multiplied by the percentage working interest owned by Whiting. Although many of Whiting's wells produce both oil and natural gas, a well is categorized as an oil well or a natural gas well based upon the ratio of oil to natural gas production.

The underlying properties are interests in developed properties located in oil and natural gas producing regions outlined in the chart below. The following is a summary of the approximate acreage of these properties as of September 30, 2007. Undeveloped acreage is not significant.

	Gross (acres)	Net
Rocky Mountains	85,844	38,334
Mid-Continent	57,943	26,708
Permian Basin	23,974	8,090
Gulf Coast	27,855	5,133
Total	195,616	78,265

The following is a summary of the producing wells on the underlying properties as of September 30, 2007:

	Operated Wells		Non-Operated Wells		Total	
	Gross	Net	Gross	Net	Gross	Net
Oil	284	179.3	2,071	82.0	2,355	261.3
Natural gas	89	63.8	564	56.5	653	120.3
Total	373	243.1	2,635	138.5	3,008	381.6

The following is a summary of the number of developmental wells drilled by Whiting on the underlying properties during the last three years. Whiting did not drill any exploratory wells during the periods presented.

Table of Contents

	Year Ended December 31,					
	2004		2005		2006	
	Gross	Net	Gross	Net	Gross	Net

- (1) The net profits interest entitles the trust to receive 90% of the net proceeds from the sale of production of 9.04 MMBOE from the underlying properties taken as a whole. The allocation and make up of such reserves among regions is from the reserve report and may not reflect the actual location and make up from which reserves will be produced under the net profits interest.
- (2) The total proved reserves attributable to the underlying properties, as estimated in the reserve report, were 13.18 MMBOE with a pre-tax PV10% value of \$243.5 million, although the net profits interest will terminate when 9.04 MMBOE have been produced. The amounts in the table reflect the trust's 90% net profits interest in such reserves. Proved reserves reflected in the table above for the net profits interest are based on NYMEX oil and natural gas prices as of September 30, 2007 of \$81.66 per Bbl of oil and \$6.15 per Mcf of natural gas less field transportation, quality and basis differentials of \$8.20 per Bbl of oil and \$0.25 per Mcf of natural gas, resulting in field adjusted prices of \$73.46 per Bbl of oil and \$5.90 per Mcf of natural gas.
- (3) Pre-tax PV10% value may be considered a non-GAAP financial measure as defined by the SEC and is derived from the standardized measure of discounted future net cash flows, which is the most directly comparable

GAAP financial measure. Pre-tax PV10% value is computed on the same basis as the standardized measure of discounted future net cash flows but without deducting future income taxes. However, as of September 30, 2007, no provision for federal or state income taxes has been provided because taxable income is passed through to the unitholders of the trust. Therefore, the standardized measure of discounted future net cash flows attributable to the net profits interest is equal to the pre-tax PV10% value. The pre-tax PV10% value and the standardized measure of discounted future net cash flows do not purport to present the fair value of the oil and natural gas reserves attributable to the net profits interest.

The underlying properties are located in several major onshore producing basins in the continental United States. Whiting believes this broad distribution provides a buffer against regional trends that may negatively impact production or prices. Based on the pre-tax PV10% value, approximately 60.6% of these properties are operated by Whiting, and, as of September 30, 2007, these properties' reserves were 63.3% oil and natural gas liquids and 36.7% natural gas according to the reserve report. These properties are located in mature fields

Table of Contents

and have established production profiles. However production and distributions to the trust will decline over time.

Rocky Mountains Region. The underlying properties in the Rocky Mountains region are located in two distinct areas. The first, from which oil is primarily produced, includes the Bighorn and Powder River Basins of Wyoming and the Williston Basin in North Dakota and Montana and the second, from which natural gas is primarily produced, includes southwest Wyoming, Colorado and Utah. These properties include 65 fields of which Whiting operates wells in 33 of these fields. Average daily net production attributable to the net profits interest from these properties was 1,285 BOE/d for the month of September 2007 from 677 wells that will be burdened by the net profits interest. The following table summarizes Whiting's interests in the major fields in this region.

Field	No. of Wells Operated/ Non-Operated	Operator	State	County	Productive Zones	Gross/ Net Acres	Average Working Interest	Average Net Revenue Interest
Bainville	3/16	Whiting and Others	MT	Roosevelt	Mission Canyon, Ratcliff, Nisku, Winnipegosis	5,150/1,010	15.7%	12.9%

Mid-Continent Region. The underlying properties in the Mid-Continent region are located in Arkansas, Kansas, Michigan and Oklahoma. These properties include 54 fields of which Whiting operates wells in 30 of these fields. Average daily net production attributable to the net profits interest from these properties was 1,623 BOE/d for the month of September 2007 from 455 wells that will be burdened by the net profits interest. The following table summarizes Whiting's interests in the major fields in this region.

Permian Basin Region. The Permian Basin Region of West Texas and New Mexico is one of the major hydrocarbon producing provinces in the continental United States. The underlying properties in the Permian Basin region are located in Texas and New Mexico. These properties include 28 fields of which Whiting operates wells in 10 of these fields. Average daily net production attributable to the net profits interest from

Table of Contents

these properties was 602 BOE/d for the month of September 2007 from approximately 1,612 wells that will be burdened by the net profits interest. The following table summarizes Whiting's interests in the major fields in this region.

Field	No. of Wells Operated/ Non-Operated	Operator	State	County	Productive Zones	Gross/ Net Acres	Average Working Interest	Average Net Revenue Interest
Iatan East Howard	0/414	CrownQuest Operating, LLC	TX	Howard, Mitchell	San Andres, San Angelo (Glorieta), and Clear Fork	3,840/322	8.4%	7.0%
Fullerton	10/880	Exxon Mobil Corporation and Whiting	TX	Andrews	Clear Fork	1,840/1,563	60.1%	45.0%
Patricia	5/1	Whiting and Others	TX	Dawson	Fusselman and Sprayberry	1,417/ 1,337	66.7%	54.3%

Gulf Coast Region. The underlying properties in the Gulf Coast region are located in Texas, Louisiana, Mississippi and Alabama. These properties include 26 onshore fields of which Whiting operates wells in two of these fields. Average daily net production attributable to the net profits interest from these properties was predominately natural gas and was 547 BOE/d for the month of September 2007 from approximately 264 wells that will be burdened by the net profits interest. The following table summarizes Whiting's interest in the major field in this region.

Field	No. of Wells Operated/ Non-Operated	Operator	State	County	Productive Zones	Gross/ Net Acres	Average Working Interest	Average Net Revenue Interest
Mestena Grande	0/33	Cabot Oil & Gas Corporation	TX	Jim Hogg	Queen City	10,691/1,334	12.9%	9.8%

Reserves

Cawley, Gillespie & Associates, Inc. estimated oil (including natural gas liquids) and natural reserves attributable to the underlying properties as of September 30, 2007. Numerous uncertainties are inherent in estimating reserve volumes and values, and the estimates are subject to change as additional information becomes available. The reserves actually recovered and the timing of production of the reserves may vary significantly from the original estimates.

Cawley, Gillespie & Associates, Inc. calculated reserve quantities and revenues attributable to the net profits interest based on projections of reserves and revenues attributable to the underlying properties less reserve quantities of a sufficient value to pay 90% of the future estimated costs, before trust administrative expenses, that are deducted in calculating net proceeds. Proved reserve quantities attributable to the net profits interest are calculated by multiplying the gross reserves for the underlying properties by the net profits interest assigned to the trust in the underlying properties. The net revenues attributable to the trust's reserves are net of the share of applicable production expenses,

taxes and post-production costs that are used to calculate the net profits interest. The reserves and net revenues attributable to the net profits interest include only the reserves attributable to the underlying properties that are expected to be produced within the term of the net profits interest calculated as described above.

The discounted estimated future net revenues presented below were prepared using assumptions required by the SEC. Except to the extent otherwise described below, these assumptions include the use of NYMEX oil and natural gas prices as of September 30, 2007 of \$81.66 per Bbl of oil and \$6.15 per Mcf of natural gas less field transportation, quality and basis differentials of \$8.20 per Bbl of oil and \$0.25 per Mcf of natural gas, resulting in field adjusted prices of \$73.46 per Bbl of oil and \$5.90 per Mcf of natural gas, as well as costs for estimated future development and production expenditures to produce the proved reserves as of September 30, 2007. Because oil and natural gas prices are influenced by many factors, use of prices as of September 30, 2007, as required by the SEC, may not be the most accurate basis for estimating future revenues of reserve data. Future net cash flows are discounted at an annual rate of 10%. There is no provision for federal income taxes with respect to the future net cash flows attributable to the net profits interest because future net

Table of Contents

revenues are not subject to taxation at the trust level. See Federal Income Tax Consequences for more information.

Proved Reserves of Underlying Properties and the Net Profits Interest. The following table sets forth, as of September 30, 2007, certain estimated proved reserves, estimated future net revenues and the discounted present value thereof attributable to the underlying properties and the net profits interest, in each case derived from the reserve report. A summary of the reserve report is included as Appendix A to this prospectus.

	Underlying Properties(1)(2)	Underlying Properties (attributable to the net profits interest)(3)	Net Profits Interest with cost reductions(4)
	(in thousands, except Bbl, Mcf and BOE amounts)		
Proved Reserves:			
Oil and natural gas liquids(MBbls)	8,663	5,157	3,016
Natural gas (MMcf)	27,082	17,902	10,569
Oil equivalents (MBOE)	13,176	8,141	4,778
Future net revenues	\$ 415,055	\$ 279,074	\$ 279,074
Discounted estimated future net revenues(5)	\$ 243,535	\$ 198,481	\$ 198,481
Standardized measure(6)	\$ 243,535	\$ 198,481	\$ 198,481

- (1) The net profits interest entitles the trust to receive 90% of the net proceeds from the sale of production of 9.04 MMBOE from the underlying properties.
- (2) Reserve volumes and estimated future net revenues for underlying properties reflect volumes and revenues attributable to the underlying properties during the term of the net profits interest.
- (3) Reflects 90% of the estimated proved reserves attributable to the underlying properties expected to be produced within the term of the net profits interest based on the reserve report. Estimated future net revenues from proved reserves takes into account future estimated costs that are deducted in calculating net proceeds.
- (4) Proved reserves for the net profits interest are calculated as (x) 90% of the estimated proved reserves of the underlying properties less (y) reserve quantities of a sufficient value to pay 90% of the future estimated costs that are deducted in calculating net proceeds. Accordingly, proved reserves for the net profits interest reflect quantities expected to be produced during the term of the net profits interest that are calculated after reductions for future costs and expenses based on price and cost assumptions used in the reserve estimates. Estimated future net revenues from proved reserves takes into account future estimated costs that are deducted in calculating net proceeds.
- (5) No provision for federal or state income taxes has been provided because taxable income is passed through to the trust unitholders. The present values of future net revenues for the underlying properties and the net profits interest were determined using a discount rate of 10% per annum.
- (6) No provision for federal or state income taxes has been provided because taxable income is passed through to the unitholders of the trust. Therefore, the standardized measure of the underlying properties and the underlying properties attributable to the net profits interest equal their corresponding pre-tax PV10% values, which totaled

\$243.5 million and \$198.5 million, respectively, as of September 30, 2007.

Information concerning historical changes in proved reserves attributable to the underlying properties, and the calculation of the standardized measure of discounted future net revenues related thereto, is contained in the unaudited supplemental information contained elsewhere in this prospectus. Whiting has not filed reserve estimates covering the underlying properties with any other federal authority or agency.

Table of Contents

The following table summarizes the changes in estimated proved reserves of the underlying properties for the periods indicated.

	Oil (Mbbbl)	Nat. Gas (MMcf)	(MBOE)
Balance at January 1, 2004	7,295	35,579	13,225
Revisions, extensions, discoveries and additions	2,587	12,495	4,670
Production	(827)	(4,268)	(1,538)
Balance at December 31, 2004	9,055	43,806	16,357
Revisions, extensions, discoveries and additions	1,887	281	1,934
Production	(893)	(5,082)	(1,740)
Balance at December 31, 2005	10,049	39,005	16,551
Revisions, extensions, discoveries and additions	(248)	(2,058)	(591)
Production	(946)	(5,057)	(1,789)
Balance at December 31, 2006	8,855	31,890	14,171
Revisions, extensions, discoveries and additions	525	(1,480)	276
Production	(717)	(3,328)	(1,271)
Balance at September 30, 2007	8,663	27,082	13,176
Proved developed reserves:			
Balance at December 31, 2004	9,037	43,795	16,336
Balance at December 31, 2005	10,027	38,989	16,525
Balance at December 31, 2006	8,849	31,546	14,107
Balance at September 30, 2007	8,663	27,082	13,176

Abandonment of Underlying Properties

Whiting will have the right to abandon its interest in any well or property comprising a portion of the underlying properties if, in its opinion, such well or property ceases to produce or is not capable of producing in commercially paying quantities. To reduce or eliminate the potential conflict of interest between Whiting and the trust in determining whether a well is capable of producing in commercially paying quantities, Whiting has agreed to operate the underlying properties as a reasonably prudent operator in the same manner that it would operate if these properties were not burdened by the net profits interest and Whiting has agreed to use commercially reasonable efforts to cause the other operators to operate these properties in the same manner. For the years ended December 31, 2004, 2005 and 2006, Whiting plugged and abandoned 3, 6 and 0 wells, respectively, with respect to the underlying properties based on its determination that such wells were no longer economic to operate.

Marketing and Post-Production Services

Pursuant to the terms of the conveyance creating the net profits interest, Whiting will have the responsibility to market, or cause to be marketed, the oil, natural gas and natural gas liquid production attributable to the underlying properties. The terms of the conveyance creating the net profits interest do not permit Whiting to charge any marketing fee other than fees for marketing paid to non-affiliates when determining the net proceeds upon which the net profits interest will be calculated. As a result, the net proceeds to the trust from the sales of oil, natural gas and natural gas liquid production from the underlying properties will be determined based on the same price that Whiting receives for oil, natural gas and natural gas liquid production attributable to Whiting's remaining interest in the underlying properties.

Table of Contents

Whiting principally sells its oil and natural gas production to end users, marketers and other purchasers that have access to nearby pipeline facilities. In areas where there is no practical access to pipelines, oil is trucked to storage facilities. Whiting's marketing of oil and natural gas can be affected by factors beyond its control, the effects of which cannot be accurately predicted.

Title to Properties

The underlying properties are subject to certain burdens that are described in more detail below. To the extent that these burdens and obligations affect Whiting's rights to production and the value of production from the underlying properties, they have been taken into account in calculating the trust's interests and in estimating the size and the value of the reserves attributable to the underlying properties.

Whiting's interests in the oil and natural gas properties comprising the underlying properties are typically subject, in one degree or another, to one or more of the following:

royalties, overriding royalties and other burdens on production, express and implied, under oil and natural gas leases;

overriding royalties, production payments and similar interests and other burdens on production created by Whiting or its predecessors in title;

a variety of contractual obligations arising under operating agreements, farm-out agreements, production sales contracts and other agreements that may affect these properties or Whiting's title thereto;

liens that arise in the normal course of operations, such as those for unpaid taxes, statutory liens securing unpaid suppliers and contractors and contractual liens under operating agreements that are not yet delinquent or, if delinquent, are being contested in good faith by appropriate proceedings;

pooling, unitization and communitization agreements, declarations and orders;

easements, restrictions, rights-of-way and other matters that commonly affect property;

conventional rights of reassignment that obligate Whiting to reassign all or part of a property to a third party if Whiting intends to release or abandon such property; and

rights reserved to or vested in the appropriate governmental agency or authority to control or regulate the underlying properties and the net profits interest therein.

Whiting believes that the burdens and obligations affecting the oil and natural gas properties comprising the underlying properties are conventional in the industry for similar properties. Whiting also believes that the existing burdens and obligations do not, in the aggregate, materially interfere with the use of these properties and will not materially adversely affect the value of the net profits interest.

Whiting acquired the underlying properties in various transactions that have occurred during its 27 year existence. At the time of its acquisitions of the underlying properties, Whiting undertook a title examination of these properties.

Oil and natural gas leases are generally considered real property interests under the laws of the jurisdictions where the underlying properties are located. Net profits interests are non-operating, non-possessory interests carved out of the oil and natural gas leasehold estate, but some jurisdictions have not directly determined whether a net profits interest is a

real or a personal property interest. Whiting believes that it is possible that the net profits interest may not be treated as a real property interest under the laws of certain of the jurisdictions where the underlying properties are located. Whiting intends, however, to record the conveyance of the net profits interest in the relevant real property records of all applicable jurisdictions. Whiting believes that, if, during the term of the trust, Whiting becomes involved as a debtor in a bankruptcy proceeding, the net profits interest relating to the underlying properties in most, if not all, of the jurisdictions should be treated as a fully conveyed property interest. In such a proceeding, however, a determination could be made that the conveyance constitutes an executory contract and the net profits interest is not a fully conveyed property interest under the laws of the applicable jurisdiction, and if such contract were not to be

Table of Contents

assumed in a bankruptcy proceeding involving Whiting, the trust would be treated as an unsecured creditor of Whiting with respect to such net profits interest in the pending bankruptcy proceeding. Although no assurance can be given, Whiting believes that the conveyance of the net profits interest relating to the underlying properties in most, if not all, of the jurisdictions of which these properties are located should not be subject to rejection in a bankruptcy proceeding as an executory contract.

Competition and Markets

The oil and natural gas industry is highly competitive. Whiting competes with major oil and natural gas companies and independent oil and natural gas companies for oil and natural gas, equipment, personnel and markets for the sale of oil and natural gas. Many of these competitors are financially stronger than Whiting, but even financially troubled competitors can affect the market because of their need to sell oil and natural gas at any price to attempt to maintain cashflow. The trust will be subject to the same competitive conditions as Whiting and other companies in the oil and natural gas industry.

Oil and natural gas compete with other forms of energy available to customers, primarily based on price. These alternate forms of energy include electricity, coal and fuel oils. Changes in the availability or price of oil, natural gas or other forms of energy, as well as business conditions, conservation, legislation, regulations and the ability to convert to alternate fuels and other forms of energy may affect the demand for oil and natural gas.

Future price fluctuations for oil, natural gas and natural gas liquids will directly impact trust distributions, estimates of reserves attributable to the trust's interests and estimated and actual future net revenues to the trust. In view of the many uncertainties that affect the supply and demand for oil and natural gas, neither the trust nor Whiting can make reliable predictions of future oil and natural gas supply and demand, future product prices or the effect of future product prices on the trust.

Environmental Matters and Regulation

General. The operations of the underlying properties are subject to stringent and complex federal, state and local laws and regulations governing environmental protection as well as the discharge of materials into the environment. These laws and regulations may, among other things:

- restrict the types, quantities and concentration of various substances that can be released into the environment in connection with oil and natural gas drilling and production activities;

- limit or prohibit drilling activities on certain lands lying within wilderness, wetlands and other protected areas;

- require investigatory and remedial measures to mitigate pollution from former and ongoing operations, such as requirements to close pits and plug abandoned wells; and

- enjoin some or all of the operations of underlying properties deemed in non-compliance with permits issued pursuant to such environmental laws and regulations.

Failure to comply with these laws and regulations may trigger a variety of administrative, civil and criminal enforcement measures, including the assessment of monetary penalties, the imposition of remedial requirements and the issuance of orders enjoining future operations or imposing additional compliance requirements on such operations. Certain environmental statutes impose strict joint and several liability for costs required to clean up and restore sites where hazardous substances have been disposed or otherwise released. Moreover, these laws and regulations may also restrict the rate of oil and natural gas production below the rate that would otherwise be possible. The regulatory

burden on the oil and natural gas industry increases the cost of doing business in the industry and consequently affects profitability. Additionally, Congress and federal and state agencies frequently revise environmental laws and regulations, and any changes that result in more stringent and costly waste handling, disposal and cleanup requirements for the oil and natural gas industry could have a significant impact on the operating costs of the underlying properties.

Table of Contents

The following is a summary of the existing laws, rules and regulations to which the operations of the underlying properties are subject that are material to the operation of the underlying properties.

Waste Handling. The Resource Conservation and Recovery Act, or RCRA, and comparable state statutes, regulate the generation, transportation, treatment, storage, disposal and cleanup of hazardous and non-hazardous wastes. Under the auspices of the federal Environmental Protection Agency, or EPA, the individual states administer some or all of the provisions of RCRA, sometimes in conjunction with their own, more stringent requirements. Drilling fluids, produced waters and most of the other wastes associated with the exploration, development and production of crude oil or natural gas are currently regulated under RCRA's non-hazardous waste provisions. However, it is possible that certain oil and natural gas exploration and production wastes now classified as non-hazardous could be classified as hazardous wastes in the future. Any such change could result in an increase in the costs to manage and dispose of wastes, which could have a material adverse effect on the cash distributions to the trust unitholders.

Comprehensive Environmental Response, Compensation and Liability Act. The Comprehensive Environmental Response, Compensation and Liability Act, or CERCLA, also known as the Superfund law, and comparable state laws impose strict joint and several liability, without regard to fault or legality of conduct, on classes of persons who are considered to be responsible for the release of a hazardous substance into the environment. These persons include the owner or operator of the site where the release occurred, and anyone who disposed or arranged for the disposal of a hazardous substance released at the site. Under CERCLA, such persons may be subject to joint and several liability for the costs of cleaning up the hazardous substances that have been released into the environment, for damages to natural resources and for the costs of certain health studies. Whiting has not been notified that it has been named as a potentially responsible party to any Superfund sites. In addition, it is not uncommon for neighboring landowners and other third-parties to file claims for personal injury and property damage allegedly caused by the hazardous substances released into the environment.

The underlying properties may have been used for oil and natural gas exploration and production for many years. Although Whiting believes that it has utilized operating and waste disposal practices that were standard in the industry at the time, hazardous substances, wastes or hydrocarbons may have been released on or under the properties, or on or under other locations, including off-site locations, where such substances have been taken for disposal. In addition, the underlying properties may have been operated by third parties or by previous owners or operators whose treatment and disposal of hazardous substances, wastes or hydrocarbons was not under Whiting's control. These properties and the substances disposed or released on them may be subject to CERCLA, RCRA and analogous state laws. Under such laws, Whiting could be required to remove previously disposed substances and wastes, remediate contaminated property, or perform remedial plugging or pit closure operations to prevent future contamination.

Water Discharges. The Federal Water Pollution Control Act, or the Clean Water Act, and analogous state laws, impose restrictions and strict controls with respect to the discharge of pollutants, including spills and leaks of oil and other substances, into state waters or waters of the United States. The discharge of pollutants into regulated waters is prohibited, except in accordance with the terms of a permit issued by EPA or an analogous state agency. Spill prevention, control and countermeasure requirements under federal law require appropriate containment berms and similar structures to help prevent the contamination of navigable waters in the event of a petroleum hydrocarbon tank spill, rupture or leak. In addition, the Clean Water Act and analogous state laws require individual permits or coverage under general permits for discharges of storm water runoff from certain types of facilities. Federal and state regulatory agencies can impose administrative, civil and criminal penalties for non-compliance with discharge permits or other requirements of the Clean Water Act and analogous state laws and regulations.

Global Warming and Climate Control. Recent scientific studies have suggested that emissions of certain gases, commonly referred to as greenhouse gases and including carbon dioxide and methane, may be contributing to warming of the Earth's atmosphere. In response to such studies, the U.S. Congress is actively considering legislation to

reduce emissions of greenhouse gases. In addition, at least 17 states have already taken legal measures to reduce emissions of greenhouse gases, primarily through the planned development of

Table of Contents

greenhouse gas emission inventories and/or regional greenhouse gas cap and trade programs. Also, as a result of the U.S. Supreme Court's decision on April 2, 2007 in *Massachusetts, et al. v. EPA*, the EPA may be required to regulate greenhouse gas emissions from mobile sources (e.g., cars and trucks) even if Congress does not adopt new legislation specifically addressing emissions of greenhouse gases. The Court's holding in *Massachusetts* that greenhouse gases fall under the federal Clean Air Act's definition of "air pollutant" may also result in future regulation of greenhouse gas emissions from stationary sources under certain Clean Air Act programs. New legislation or regulatory programs that restrict emissions of greenhouse gases in areas where the underlying properties operate could adversely affect demand for oil and gas products that, in turn, could limit cash distributions to the trust unitholders.

Air Emissions. The Federal Clean Air Act, and comparable state laws, regulate emissions of various air pollutants from various industrial sources through air emissions permitting programs and also impose other monitoring and reporting requirements. Operators of the underlying properties may be required to incur certain capital expenditures in the future for air pollution control equipment in connection with obtaining and maintaining operating permits and approvals for air emissions. In addition, EPA has developed, and continues to develop, stringent regulations governing emissions of toxic air pollutants at specified sources. Federal and state regulatory agencies can impose administrative, civil and criminal penalties for non-compliance with air permits or other requirements of the federal Clean Air Act and associated state laws and regulations.

OSHA and Other Laws and Regulation. Whiting is subject to the requirements of the federal Occupational Safety and Health Act, or OSHA, and comparable state statutes. The OSHA hazard communication standard, the EPA community right-to-know regulations under the Title III of CERCLA and similar state statutes require that Whiting organize and/or disclose information about hazardous materials used or produced in its operations. Whiting believes that it is in substantial compliance with these applicable requirements and with other OSHA and comparable requirements.

The federal Department of Homeland Security Appropriations Act of 2007 requires the Department of Homeland Security (DHS) to issue regulations establishing risk-based performance standards for the security of chemical and industrial facilities, including oil and gas facilities that are deemed to present high levels of security risk. The DHS issued an interim final rule in April 2007 regarding risk-based performance standards to be attained pursuant to the act and the DHS is currently adopting an Appendix A to the interim rules that establish the chemicals of concern and their respective threshold quantities that will trigger compliance with the interim rules. Whiting has not yet determined the costs to comply with the interim rules but such costs could be substantial.

Consideration of Environmental Issues in Connection with Governmental Approvals. Whiting's operations frequently require licenses, permits and/or other governmental approvals. Several federal statutes, including the Outer Continental Shelf Lands Act and the National Environmental Policy Act require federal agencies to evaluate environmental issues in connection with granting such approvals and/or taking other major agency actions. The Outer Continental Shelf Lands Act, for instance, requires the U.S. Department of Interior to evaluate whether certain proposed activities would cause serious harm or damage to the marine, coastal or human environment. Similarly, the National Environmental Policy Act requires the Department of Interior and other federal agencies to evaluate major agency actions having the potential to significantly impact the environment. In the course of such evaluations, an agency would have to prepare an environmental assessment and, potentially, an environmental impact statement.

Whiting believes that it is in substantial compliance with all existing environmental laws and regulations applicable to the current operations of the underlying properties and that its continued compliance with existing requirements will not have a material adverse effect on the cash distributions to the trust unitholders. For instance, Whiting did not incur any material capital expenditures for remediation or pollution control activities for the period ended September 30, 2007 with respect to these properties. Additionally, as of the date of this prospectus, it is not aware of any environmental issues or claims that will require material capital expenditures during the remainder of 2007 with

respect to these properties. However, there is no assurance that the passage of more stringent laws or implementing regulations in the future will not have a negative impact on the operations of these properties and the cash distributions to the trust unitholders.

Table of Contents

COMPUTATION OF NET PROCEEDS

The provisions of the conveyance governing the computation of the net proceeds are detailed and extensive. The following information summarizes the material information contained in the conveyance related to the computation of the net proceeds. This summary may not contain all information that is important to you. For more detailed provisions concerning the net profits interest, you should read the conveyance. A copy of the conveyance has been filed as an exhibit to the registration statement of which this prospectus is a part. See [Where You Can Find More Information](#).

Net Profits Interest

Whiting Petroleum Corporation's wholly-owned subsidiaries, Whiting Oil and Gas Corporation and Equity Oil Company, will convey a term net profits interest to the trust by means of a conveyance instrument that will be recorded in the appropriate real property records in each county where the underlying properties are located. The net profits interest will burden the existing net interests owned by Whiting in the underlying properties. In the underlying properties in which Whiting is designated as the operator, Whiting has an average working interest of approximately 68.3% and an average net revenue interest of approximately 55.9%. For the underlying properties where Whiting is not the operator, Whiting has an average working interest of approximately 16.9% and an average net revenue interest of approximately 14.0%

The conveyance creating the net profits interest provides that the trust will be entitled to receive an amount of cash for each quarter equal to 90% of the net proceeds (calculated as described below) from the sale of oil, natural gas and natural gas liquid production attributable to the underlying properties.

The amounts paid to the trust for the net profits interest are based on the definitions of [gross proceeds](#) and [net proceeds](#) contained in the conveyance and described below. Under the conveyance, net proceeds are computed quarterly, and 90% of the aggregate net proceeds attributable to a computation period will be paid to the trust no later than 60 days following the end of the computation period (or the next succeeding business day). Whiting will not pay to the trust any interest on the net proceeds held by Whiting prior to payment to the trust. The trustee will make distributions to trust unitholders quarterly. See [Description of the Trust Units](#) [Distributions and Income Computations](#).

[Gross proceeds](#) means the aggregate amount received by Whiting from sales of oil, natural gas and natural gas liquids produced from the underlying properties (other than amounts received for certain future non-consent operations). [Gross proceeds](#) does not include any amount for oil, natural gas or natural gas liquids lost in production or marketing or used by Whiting in drilling, production and plant operations. [Gross proceeds](#) includes [take-or-pay](#) or [ratable take payments](#) for future production in the event that they are not subject to repayment due to insufficient subsequent production or purchases.

[Net proceeds](#) means gross proceeds less Whiting's share of the following:

- all payments to mineral or landowners, such as royalties or other burdens against production, delay rentals, shut-in oil and natural gas payments, minimum royalty or other payments for drilling or deferring drilling;

- any taxes paid by the owner of an underlying property to the extent not deducted in calculating gross proceeds, including estimated and accrued general property (ad valorem), production, severance, sales, gathering, excise and other taxes;

the aggregate amounts paid by Whiting upon settlement of the hedge contracts on a quarterly basis, as specified in the hedge contracts;

any extraordinary taxes or windfall profits taxes that may be assessed in the future that are based on profits realized or prices received for production from the underlying properties;

costs paid by an owner of an oil and natural gas property comprising the underlying properties under any joint operating agreement;

Table of Contents

costs and expenses, costs and liabilities of workovers, operating and producing oil, natural gas and natural gas liquids, including allocated expenses such as labor, vehicle and travel costs and materials and any plugging and abandonment liabilities other than costs and expenses for certain future non-consent operations;

costs or charges associated with gathering, treating and processing oil, natural gas and natural gas liquids;

a producing overhead charge in accordance with existing operating agreements;

to the extent Whiting is the operator of an underlying property and there is no operating agreement covering such underlying property, the overhead charges allocated by Whiting to such underlying property calculated in the same manner Whiting allocates overhead to other similarly owned property;

costs for recording the conveyance and costs estimated to record the termination and/or release of the conveyance;

costs paid to counterparties under the hedge contracts or to the persons that provide credit to maintain any hedge contracts, excluding any hedge settlement amounts;

amounts previously included in gross proceeds but subsequently paid as a refund, interest or penalty; and

costs and expenses for renewals or extensions of leases.

All of the hedge payments received by Whiting from hedge contract counterparties upon settlements of hedge contracts and certain other non-production revenues, including salvage value for equipment related to plugged and abandoned wells, as detailed in the conveyance will offset the operating expenses outlined above in calculating the net proceeds. If the hedge payments received by Whiting and certain other non-production revenues exceed the operating expenses during a quarterly period, the ability to use such excess amounts to offset operating expenses will be deferred, with interest accruing on such amounts at the prevailing money market rate, until the next quarterly period when such amounts are less than such expenses. If any excess amounts have not been used to offset costs at the time when 9.04 MMBOE have been produced from the underlying properties and sold, which is the time when the net profits interest will terminate, then unitholders will not be entitled to receive the benefit of such excess amounts.

Capital expenditures for the testing, drilling, completion, equipping or plugging back of any well that is a part of the underlying properties will not be deducted from gross proceeds.

As is customary in the oil and natural gas industry, Whiting will deduct from the gross proceeds an overhead fee to operate those underlying properties for which Whiting is designated as the operator consistent with the applicable operating agreements. Additionally, for those underlying properties for which Whiting is designated the operator but there is no operating agreement covering such underlying property, Whiting will deduct from the gross proceeds an overhead fee to operate such underlying properties based on overhead charges allocated by Whiting to such underlying property calculated in the same manner Whiting allocates overhead to other similarly owned property. The operating activities include various engineering, accounting and administrative functions. The fee is based on a monthly charge per active operated well and Whiting's portion totaled \$2.1 million for the twelve months ending September 30, 2007 for all of the underlying properties. The fee is adjusted annually pursuant to COPAS guidelines and will increase or decrease each year based on changes in the year-end index of average weekly earnings of crude petroleum and natural gas workers.

In the event that the net proceeds for any computation period is a negative amount, the trust will receive no payment for that period, and any such negative amount plus accrued interest at the prevailing money market rate will be deducted from gross proceeds in the following computation period for purposes of determining the net proceeds for that following computation period.

Gross proceeds and net proceeds are calculated on a cash basis, except that certain costs, primarily ad valorem taxes and expenditures of a material amount, may be determined on an accrual basis.

Table of Contents

Additional Provisions

If a controversy arises as to the sales price of any production, then for purposes of determining gross proceeds:

amounts withheld or placed in escrow by a purchaser are not considered to be received by Whiting until actually collected;

amounts received by Whiting and promptly deposited with a nonaffiliated escrow agent will not be considered to have been received until disbursed to it by the escrow agent; and

amounts received by Whiting and not deposited with an escrow agent will be considered to have been received.

The trustee is not obligated to return any cash received from the net profits interest. Any overpayments made to the trust by Whiting due to adjustments to prior calculations of net proceeds or otherwise will reduce future amounts payable to the trust until Whiting recovers the overpayments plus interest at the prevailing money market rate.

In addition, Whiting may, without the consent of the trust unitholders, require the trust to release the net profits interest associated with any well or lease that accounts for less than or equal to 0.25% of the total production from the underlying properties in the prior 12 months and provided that the net profits interest covered by such releases cannot exceed, during any 12-month period, an aggregate fair market value to the trust of \$500,000. These releases will be made only in connection with a sale by Whiting of the relevant underlying properties and are conditioned upon the trust receiving an amount equal to the fair value to the trust of such net profits interest. Any net sales proceeds paid to the trust are distributable to trust unitholders for the quarter in which they are received. Whiting has not identified for sale any of the underlying properties.

As the designated operator of underlying properties, Whiting may enter into farm-out, operating, participation and other similar agreements with respect to the property. Whiting may enter into any of these agreements without the consent or approval of the trustee or any trust unitholder.

Whiting will have the right to abandon any well or property if it reasonably believes the well or property ceases to produce or is not capable of producing in commercially paying quantities. In making such decisions, Whiting is required under the applicable conveyance to operate the underlying properties as a reasonably prudent operator in the same manner it would if these properties were not burdened by the net profits interest. Upon termination of the lease, the portion of the net profits interest relating to the abandoned property will be extinguished.

Whiting must maintain books and records sufficient to determine the amounts payable for the net profits interest to the trust. Quarterly and annually, Whiting must deliver to the trustee a statement of the computation of the net proceeds for each computation period. The trustee has the right to inspect and copy the books and records maintained by Whiting during normal business hours and upon reasonable notice.

Table of Contents

DESCRIPTION OF THE TRUST AGREEMENT

The following information and the information included under Description of the Trust Units summarize the material information contained in the trust agreement and the conveyance. For more detailed provisions concerning the trust and the conveyance, you should read the trust agreement and the conveyance. Copies of the trust agreement and the conveyance have been filed as exhibits to the registration statement. See Where You Can Find More Information.

Creation and Organization of the Trust; Amendments

Prior to the closing of this offering, Whiting Petroleum Corporation's wholly-owned subsidiaries, Whiting Oil and Gas Corporation and Equity Oil Company, will convey the net profits interest to the trust in consideration for the issuance by the trust of trust units, which will be distributed as a dividend to Whiting Petroleum Corporation. The first quarterly distribution is expected to be made prior to or on February 29, 2008 to trust unitholders owning trust units on February 19, 2008. The trust's first quarterly distribution will consist of an amount in cash paid by Whiting equal to the amount that would have been payable to the trust had the net profits interest been in effect during the period from October 1, 2007 through December 31, 2007. The second quarterly distribution is expected to be made prior to or on May 30, 2008 to trust unitholders owning trust units on May 20, 2008. The trust's second quarterly distribution will consist of an amount in cash paid by Whiting equal to the amount that would have been payable to the trust had the net profits interest been in effect during the period from January 1, 2008 through the day prior to close of this offering plus the amount payable under the net profits interest for the period from the day of closing of the offering through March 31, 2008.

The amount of quarterly cash distributions will be based on the amount of cash relating to the underlying properties that has been received and processed by Whiting and then remitted to the trustee during the applicable quarter. After the offering made hereby, Whiting will own its net interests in the underlying properties subject to and burdened by the net profits interest. The trust will be entitled to receive 90% of the net proceeds from the sale of oil, natural gas and natural gas liquid volumes produced from the underlying properties calculated in accordance with the terms of the conveyance. Also, the trust will be entitled to receive 90% of all amounts paid to Whiting from the hedge contract counterparties upon settlements of the hedge contracts, subject to certain restrictions as discussed in more detail in Computation of Net Proceeds. Additionally, the amount of net proceeds to the trust will be reduced by 90% of all payments made by Whiting to hedge contract counterparties upon settlement of the hedge contracts and all other costs paid to counterparties under the hedge contracts or to the persons that provide credit to maintain the hedge contracts.

The trust was created under Delaware law to acquire and hold the net profits interest for the benefit of the trust unitholders pursuant to an agreement between Whiting, the trustee and the Delaware trustee. The net profits interest is passive in nature and neither the trust nor the trustee has any control over or responsibility for costs relating to the operation of the underlying properties. Neither Whiting nor other operators of the underlying properties have any contractual commitments to the trust to provide additional funding or to conduct further drilling on or to maintain their ownership interest in any of these properties. After the conveyance of the net profits interest, however, Whiting will retain an interest in each of the underlying properties. For a description of the underlying properties and other information relating to them, see The Underlying Properties.

The trust agreement will provide that the trust's business activities will be limited to owning the net profits interest and any activity reasonably related to such ownership, including activities required or permitted by the terms of the conveyance related to the net profits interest. As a result, the trust will not be permitted to acquire other oil and natural gas properties or net profits interests.

The beneficial interest in the trust is divided into trust units. Each of the trust units represents an equal undivided beneficial interest in the assets of the trust. You will find additional information concerning the trust units in Description of the Trust Units.

Table of Contents

Amendment of the trust agreement requires a vote of holders of a majority of the outstanding trust units. However, no amendment may:

- increase the power of the trustee or the Delaware trustee to engage in business or investment activities; or
- alter the rights of the trust unitholders as among themselves.

Certain amendments to the trust agreement do not require the vote of the trust unitholders. The trustee may, without approval of the trust unitholders, from time to time supplement or amend the trust agreement in order to cure any ambiguity, to correct or supplement any defective or inconsistent provisions, to grant any benefit to all of the trust unitholders or to change the name of the trust, provided such supplement or amendment is not adverse to the interest of the trust unitholders. The business and affairs of the trust will be managed by the trustee. Whiting has no ability to manage or influence the operations of the trust.

Assets of the Trust

Upon completion of this offering, the assets of the trust will consist of the net profits interest and any cash and temporary investments being held for the payment of expenses and liabilities and for distribution to the trust unitholders.

Duties and Powers of the Trustee

The duties of the trustee are specified in the trust agreement and by the laws of the State of Delaware, except as modified by the trust agreement. The trustee's principal duties consist of:

- collecting cash attributable to the net profits interest and received upon settlement of the hedge contracts;
- paying expenses, charges and obligations of the trust from the trust's assets;
- distributing distributable cash to the trust unitholders;
- causing to be prepared and distributed a tax information report for each trust unitholder and to prepare and file tax returns on behalf of the trust;
- causing to be prepared and filed reports required to be filed under the Securities Exchange Act of 1934 and by the rules of any securities exchange or quotation system on which the trust units are listed or admitted to trading;
- establishing, evaluating and maintaining a system of internal controls over financial reporting in compliance with the requirements of Section 404 of the Sarbanes-Oxley Act of 2002;
- enforcing the rights under certain agreements entered into in connection with this offering; and
- taking any action it deems necessary and advisable to best achieve the purposes of the trust.

In connection with the formation of the trust, the trustee entered into several agreements with Whiting that impose obligations upon Whiting that are enforceable by the trustee on behalf of the trust. For example, when making decisions with respect to the operation, abandonment or sale of the underlying properties, Whiting is obligated under the terms of the conveyance of the net profits interest to operate the underlying properties as a reasonably prudent

operator in the same manner it would if these properties were not burdened by the net profits interest. In addition, the trust has entered into an administrative services agreement with Whiting pursuant to which Whiting has agreed to perform specified administrative services on behalf of the trust in a good and workmanlike manner in accordance with the sound and prudent practices of providers of similar services. The trustee has the power and authority under the trust agreement to enforce these agreements on behalf of the trust.

If a trust liability is contingent or uncertain in amount or not yet currently due and payable, the trustee may create a cash reserve to pay for the liability. If the trustee determines that the cash on hand and the cash

Table of Contents

to be received are insufficient to cover the trust's liability, the trustee may borrow funds required to pay the liabilities. The trustee may borrow the funds from any person, including itself or its affiliates. The trustee may also mortgage the assets of the trust to secure payment of the indebtedness. The terms of such indebtedness and security interest, if funds were loaned by the entity serving as trustee or Delaware trustee or an affiliate thereof, would be similar to the terms which such entity would grant to a similarly situated commercial customer with whom it did not have a fiduciary relationship, and such entity shall be entitled to enforce its rights with respect to any such indebtedness and security interest as if it were not then serving as trustee or Delaware trustee. If the trustee borrows funds, the trust unitholders will not receive distributions until the borrowed funds are repaid.

Each quarter, the trustee will pay trust obligations and expenses and distribute to the trust unitholders the remaining proceeds received from the net profits interest. The cash held by the trustee as a reserve against future liabilities or for distribution at the next distribution date must be invested in:

- interest bearing obligations of the United States government;
- money market funds that invest only in United States government securities;
- repurchase agreements secured by interest-bearing obligations of the United States government; or
- bank certificates of deposit.

The trust may not acquire any asset except the net profits interest, cash and temporary cash investments, and it may not engage in any investment activity except investing cash on hand.

The trust may merge or consolidate with or into one or more limited partnerships, general partnerships, corporations, business trusts, limited liability companies, or associations or unincorporated businesses if such transaction is agreed to by the trustee and by the affirmative vote of the holders of a majority of the outstanding trust units and such transaction is permitted under the Delaware Statutory Trust Act and any other applicable law.

Whiting may request that the trustee sell certain of its net profits interest under any of the following circumstances:

- the sale does not involve a material part of the trust's assets and is in the best interests of the trust unitholders; or
- the sale constitutes a material part of the trust's assets and is in the best interests of the trust unitholders, subject to the holders representing a majority of the outstanding trust units approving the sale.

Upon dissolution of the trust, the trustee must sell the net profits interest. No trust unitholder approval is required in this event.

The trustee will distribute the net proceeds from any sale of the net profits interest and other assets to the trust unitholders.

The trustee may require any trust unitholder to dispose of his trust units if an administrative or judicial proceeding seeks to cancel or forfeit any of the property in which the trust holds an interest because of the nationality or any other status of that trust unitholder. If a trust unitholder fails to dispose of his trust units, the trustee has the right to purchase them and to borrow funds to make that purchase.

The trustee is not expected to maintain a website for filings made by the trust with the SEC.

The trustee may agree to modifications of the terms of the conveyance or to settle disputes involving the conveyance. The trustee may not agree to modifications or settle disputes involving the net profits interest part of the conveyance if these actions would change the character of the net profits interest in such a way that the net profits interest becomes a working interest or that the trust becomes an operating business.
