SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

Form 10-K
(Mark One)

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2015

or

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission File Number 001-33689

athenahealth, Inc.

(Exact name of registrant as specified in its charter)

Delaware

(State or other jurisdiction of incorporation or organization)

04-3387530

(I.R.S. Employer Identification No.)

311 Arsenal Street,
Watertown, Massachusetts

(Address of principal executive offices)

617-402-1000

Registrant's telephone number, including area code

Securities registered pursuant to Section 12(b) of the Act:

02472

(Zip Code)

Title of each class

Common Stock, \$0.01 par value

Securities registered pursuant to Section 12(g) of the Act:

None

Name of each exchange on which registered

The NASDAQ Stock Market LLC

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this

Form 10-K.

Edgar Filing: ATHENAHEALTH INC - Form 10-K

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer," and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer

Accelerated filer

Non-accelerated filer (Do not check if a smaller reporting company)

Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

The aggregate market value of the common stock held by non-affiliates of the registrant was approximately \$4,284,454,879 based on the closing price on the NASDAQ Global Select Market on June 30, 2015.

At February 1, 2016, the registrant had 38,957,284 shares of common stock, par value \$0.01 per share, outstanding.

DOCUMENTS INCORPORATED BY REFERENCE

Part III of this Form 10-K incorporates information by reference from the registrant's definitive proxy statement to be filed with the Securities and Exchange Commission within 120 days after the close of the fiscal year ended December 31, 2015.

PART I

SPECIAL NOTE REGARDING

FORWARD-LOOKING STATEMENTS AND INDUSTRY DATA

This Annual Report on Form 10-K contains forward-looking statements. All statements other than statements of historical fact contained in this Annual Report on Form 10-K are forward-looking statements, including the combination or integration of newly acquired services and technology; expanded sales and marketing efforts; changes in expenses related to operations, selling, marketing, research and development, general and administrative matters, and depreciation and amortization; liquidity matters; additional fundraising; and the expected performance period and estimated term of our client relationships, as well as more general statements regarding our expectations for future financial or operational performance, service offerings, regulatory environment, and market trends. In some cases, you can identify forward-looking statements by terminology such as “may,” “will,” “should,” “expects,” “plans,” “anticipates,” “believes,” “estimates,” “predicts,” “potential,” or “continue;” the negative of these terms; or other comparable terminology. Forward-looking statements are only current predictions and are subject to known and unknown risks, uncertainties, and other factors that may cause our or our industry’s actual results, levels of activity, performance, or achievements to be materially different from those anticipated by such statements. These factors include, among other things, those listed under “Risk Factors” and elsewhere in this Annual Report on Form 10-K.

Although we believe that the expectations reflected in the forward-looking statements contained in this Annual Report on Form 10-K are reasonable, we cannot guarantee future results, levels of activity, performance, or achievements. Except as required by law, we are under no duty to update or revise any of such forward-looking statements, whether as a result of new information, future events, or otherwise, after the date of this Annual Report on Form 10-K.

Unless otherwise indicated, information contained in this Annual Report on Form 10-K concerning our industry and the markets in which we operate, including our general expectations and market position, market opportunity, and market share, is based on information from independent industry analysts and third-party sources (including industry publications, surveys, and forecasts), our internal research, and management estimates, which are derived from publicly available information released by independent industry analysts and third-party sources, as well as data from our internal research, and are based on assumptions made by us based on such data and our knowledge of such industry and markets, which we believe to be reasonable. None of the sources cited in this Annual Report on Form 10-K has consented to the inclusion of any data from its reports, and we have not sought the consent of any source. Our internal research has not been verified by any independent source, and we have not independently verified any third-party information. While we believe the market position, market opportunity, and market share information included in this Annual Report on Form 10-K is generally reliable, such information is inherently imprecise. In addition, projections, assumptions, and estimates of our future performance and the future performance of the industries in which we operate are necessarily subject to a high degree of uncertainty and risk due to a variety of factors, including those described in “Risk Factors” in Item 1A of Part I of this Annual Report on Form 10-K and elsewhere in this Annual Report on Form 10-K. These and other factors could cause results to differ materially from those expressed in the estimates made by the independent parties and by us.

In this Annual Report on Form 10-K, the terms “athenahealth,” “we,” “us,” and “our” refer to athenahealth, Inc. and its subsidiaries, unless the context indicates otherwise.

Item 1. Business.

Overview

athenahealth is a leading provider of cloud-based services and mobile applications for medical groups and health systems. Our mission is to be health care providers’ most trusted service, helping them do well by doing the right thing. We deliver cloud-based services for revenue cycle and practice management, electronic health records (“EHR”), patient engagement, patient access, care coordination, order transmission, population health management, and clinical decision support. Through these services, we connect health care information and processes across the continuum of care and drive meaningful, measurable results for more than 75,000 health care providers nationwide.

Our model combines a cloud-based network, knowledge, and back-office work, which we refer to as network, knowledge and work, to help keep health care providers profitable and prepared for every change. In most cases, we charge clients a percentage of collections for our services, aligning our financial results directly with those of our clients. In 2015, we generated revenue of \$924.7 million primarily from the sale of our services, compared to \$752.6 million in 2014 and \$595.0 million in 2013.

Table of Contents

We were incorporated in Delaware on August 21, 1997, as Athena Healthcare Incorporated. We changed our name to athenahealth.com, Inc. on March 31, 2000, and to athenahealth, Inc. on November 17, 2000. Our corporate headquarters are located at 311 Arsenal Street, Watertown, Massachusetts 02472, and our telephone number is (617) 402-1000.

Market Opportunity

We believe our market opportunity is massive and growing. Our services have historically been focused on the ambulatory health care market. Following our acquisition and integration in 2015 of Razor Insights, LLC, a provider of cloud-based billing and EHR software services to rural and community hospitals, we entered into the acute care market. As we begin to support the full continuum of care, our market opportunity may grow. The health care industry is complex, disconnected, and fragmented, and is largely served by legacy software systems that may not be able to support the current needs for collaboration, flexibility, and interoperability. A disproportionate amount of communication still takes place on paper instead of via automated communications. Outdated, inflexible systems, and paper workflows create significant costs for health care organizations, which suffer from substantial administrative work, duplicated efforts, and errors. The complex business of health care is becoming increasingly more reliant on interoperability – the easy, open flow of clinical and financial information. Whether health systems and medical groups are moving rapidly or slowly towards value-based reimbursement, the success of health systems and medical groups increasingly hinges on their ability to engage patient populations and to coordinate patient care across a multitude of settings, while optimizing efficiency along the way. By allowing athenahealth to address these problems, health care providers can focus on the practice of medicine and free their staff to spend time on higher-value tasks.

The activities required to ensure appropriate payment for health care services rendered have increased in number and complexity for the following reasons:

Legislative and regulatory reform efforts. Legislative reform, including the Patient Protection and Affordable Care Act (“ACA”), has been driving fundamental shifts in the health care reimbursement landscape. For example, as part of the ACA millions of people have been required to purchase health insurance coverage. In addition, the passage of the Medicare Access and Children's Health Insurance Program (“CHIP”) Reauthorization Act of 2015 (“MACRA”) represents a significant upcoming shift in payment and delivery models and codifies the transition from volume-based reimbursement to value-based payments. Also, the Department of Health and Human Services’ (“HHS”) rule adopts the International Classification of Diseases 10th Revision (“ICD-10”) code set for diagnoses and procedures, which represents a more complex and detailed reporting scheme that requires claims to be filed with ICD-10 codes in order to be processed and paid. ICD-10 went into effect in the United States on October 1, 2015.

Health benefit plan design. Health insurers have introduced a wide range of benefit structures, many of which are customized to the unique goals of particular employer groups. Such insurers also continually update their reimbursement rules based on ongoing monitoring of consumption patterns, in response to new medical products and procedures, and to address changing employer demands. This has resulted in an increase in the number of rules regarding who is eligible for health care services, what health care services are eligible for reimbursement, and who is responsible to pay for health care services delivered. It has also resulted in more plans that require a larger proportion of patient contribution for services delivered; these dynamics increase the burden on health systems and medical groups to manage and pursue receivables directly with the patient. Health systems and medical groups need to be continually aware of the diversity and dynamic nature of health benefit plan design.

New payment models. While the fee-for-service framework can be complicated enough, rapidly emerging outcome-based payment models are even more complex, requiring health care providers to capture and provide appropriate data to obtain payments. Accountable care programs also require a much greater focus on care coordination and cost efficiency across multiple health care providers. To complicate reimbursement even further, some models, such as Pay-For-Performance, demand that health care providers first identify programs for which they are eligible, and then enroll in programs, identify eligible patients, and record relevant billing and clinical data for each eligible encounter. These newer models continue to evolve and grow in both number and complexity.

Financial incentives for the use of EHRs. The federal government enacted a financial incentive program through the 2009 Health Information Technology for Economic and Clinical Health Act (the “HITECH Act”) for health care providers who demonstrate “Meaningful Use” of a certified EHR technology. While payments under the program do not

represent a sustained market opportunity, they have shifted buying patterns since they were instituted, with many health care providers accelerating their purchase of EHRs and making revenue cycle system decisions tied to an EHR selection and their ability to demonstrate "Meaningful Use".

In addition to administering typical business functions, health care providers must dedicate significant time and resources to physician orders, including referrals to specialists, imaging centers, laboratories, pharmacies, and inpatient admissions. This requires a series of communications to ensure the care is appropriate and eligible for reimbursement. To process these communications, medical practices often interact with multiple software systems, manage communications via fax, and are

Table of Contents

challenged with having to contact patients, payers, and other trading partners to effectively exchange the right information to accompany clinical orders.

Our Strategy

Our mission is to be health care providers' most trusted service, helping them do well by doing the right thing. In almost all cases, we price our services as a percentage of collections, a strategy that incentivizes us to improve performance and reduce costs through more efficient operations. As medical groups and health systems face rising costs and complexity, they need solutions for a diverse set of problems, including the ever increasing administrative work driven by that increased complexity, new, more complicated reimbursement models, partners' demand for electronic data exchange, pressure to adopt expensive EHRs, continued changes to federally mandated transaction standards, new payer rules, and the challenges of collecting payments from uninsured, underinsured, and high deductible health plan patients. Health care providers and practices also face time-consuming administrative challenges, such as processing and sorting a practice's incoming paper documents; identifying and managing payer rules; and having a live operator take patient phone calls after a practice closes for the day.

We believe the traditional software model fails to address these needs. Conventional software does not allow for rapid, intelligent evolution of system functionality and client needs. Additionally, locally-installed software favors larger organizations that can afford a sizable upfront investment in hardware and software, plus the staff to manage and maintain these systems. With the traditional software model, the client is still responsible for all of the back-office work from managing claims to handling time-consuming clinical paperwork.

In contrast, cloud-based software can solve a greater set of problems because it can quickly be updated and delivered to all clients – as a single, shared instance of software – without expensive installations or upgrades. The ability to perform administrative back-office services is also greatly facilitated by cloud-based software. Combining these back-office services, and many more, to our cloud-based network, is the crux of our services model. As our cloud-based software delivers the right knowledge to the right person at the right time, our back-office services execute work, at scale, that would otherwise fall upon the practice.

The connectivity and system infrastructure we provide would normally be unattainable for small independent practices, which make up a large portion of the health care provider market. However, because we automate processes and scale work across our entire provider network, we can efficiently deliver our services to medical practices of every size. By giving small practices the same technical and service infrastructure available to large clients, we provide significant benefits not only to those practices, but also to their clinical exchange and trading partners with whom they share vital information. As practices continue to be acquired or divested by other entities, this strategic flexibility enhances our ability to compete, regardless of whether a practice is independent or owned by a large enterprise.

Key elements of our strategic priorities include:

Fully leverage the power of our network. Our ability to leverage the power of our network, which includes over 75,000 providers and over 38 million patients, is one of our greatest differentiators. Through our network, we have the ability to connect doctors to other doctors, to payers, and to patients, and we will continue to find ways to monetize the network effects inherent in our platform.

Continue our expansion across the continuum of care. Our vision is to build a unified clinical experience that allows providers to cross environments (inpatient, outpatient, etc.) without having to log in to different systems. We aim to present a single clinical and financial record, integrating information for the user from any system on which information resides. We have made rapid progress in less than a year on our expansion into delivering services to hospitals and health systems. We will continue to expand our service offerings organically, through acquisitions, and through integration with our More Disruption Please ("MDP") partners' solutions, to provide solutions for new modalities across every setting of care.

Equip providers to win at alternative reimbursement. We will continue to orient our services to enable clients to participate in pay-for-reporting, pay-for-performance, shared savings, and other bonus payment programs. We will also establish new engagement points to connect with patients, as this stakeholder group will become an increasingly important part of such payment programs.

Configure our organization to enable greater scaling efficiencies. We will continuously refine our organizational structure to align with the objectives of achieving greater efficiency and effectiveness in execution. We will find ways to further streamline our business, including, for example, the ways in which we run product demonstrations, manage client onboarding and surface meaningful analysis in our clients' work flows, in an effort to create a better experience for our clients and reduce costs.

3

Table of Contents

Our Services

By combining three distinct but interconnected components – network, knowledge, and work – we empower our clients to achieve and sustain financial health while staying focused on quality patient care. We deliver the majority of our service offerings using a single instance of cloud-based software, which we refer to as athenaNet. Including our clients on the same instance of software creates a network effect. We believe that this network effect enables each client to benefit from the collective experience of other clients. As the network grows, we believe these benefits also expand. athenaNet acts as a conduit for the exchange of information among clients, payers, trading partners, and our staff of experts. It enables us to learn continuously, innovate with agility, and deliver near-instant updates that rapidly improve performance. In addition, our clients benefit from back-office administrative work that we perform on their behalf. This work ranges from receiving, scanning, and delivering faxes to tracking claims with payers and managing denials. We automate this work whenever possible; when automation is not an option, we perform the work at massive scale with our teams of experts. The knowledge we gain from doing work for our clients and discovering ways to improve their performance is culled, curated, and captured within athenaNet through mechanisms that include a patented billing rules engine and clinical quality management engine. As we work with clients, payers, and other industry trading partners, more expert knowledge is infused into each service, which we believe makes athenaNet “smarter” and more powerful for our clients. This unique combination of network, knowledge, and work is fundamental to our service model and value proposition to clients.

We also provide clients in the health care industry (e.g., pharmaceutical companies, managed care companies, and market research firms) the opportunity to sponsor clinical decision support services in order to engage with our Epocrates® member network and offer the sale of subscriptions to Epocrates’ premium drug and clinical reference tools to health care professionals.

We have developed a number of cloud-based services. We offer various combinations of our services to our clients, depending on whether they are medical groups and practices or hospitals and larger health systems. A description of each service component follows the table below.

As of December 31, 2015, our suite of services included:

Service Components	Service Name
Revenue cycle and practice management	athenaCollector®
Electronic health records	athenaClinicals®
Patient engagement	athenaCommunicator® athenaOne®
Order transmission	athenaCoordinator®
Patient access, care coordination, and order transmission	athenaCoordinator® Enterprise
Population health management	athenaCommunicator® Enterprise
Clinical decision support	Epocrates®

Revenue Cycle and Practice Management

The foundation of athenahealth’s service portfolio is athenaCollector, its cloud-based revenue cycle and practice management service, which became generally available in 2000. Through this service, athenahealth helps to reduce administrative work and enables clients to improve performance and efficiency under reimbursement models, including Pay-for-Performance.

athenaCollector helps clients improve revenue cycle management by checking patient eligibility prior to appointments, tracking practice activity in real-time and providing a workflow dashboard, as well as performance reporting tools including benchmarks, against other clients on athenaNet. This service helps clients maintain compliance with billing and claims management standards through a patented billing rules engine. athenaCollector also helps clients improve practice management by simplifying workflows related to patient registration, scheduling, check-in, charge entry, referral management, check-out, follow-up, collections, accounting and reporting. It eliminates or reduces many time-consuming activities that typically burden our clients and their staff, allowing them to focus more on patient care and other business priorities.

The patented billing rules engine that powers athenaCollector represents the industry's largest database of payer-specific reimbursement requirements. It delivers in-depth insight and knowledge that helps clients collect the dollars they have earned.

Table of Contents

Our rules engine is updated daily based on information amassed through the collective experience of thousands of clients across the nation and through our research on the complex, evolving requirements of hundreds of payers and thousands of benefit plans. Clients route their day-to-day electronic and paper-based payer claims to us before they go to payers, which we then process using our patented billing rules engine to avoid denials and reimbursement delays and improve practice performance. When denials do occur, our teams of experts work to understand them and add new rules to the engine that help our entire client base avoid future denials.

Our back-office services team partners with clients at all key steps in the revenue cycle, including: coordinating with payers to ensure that providers are properly set up for billing; submitting claims to payers directly or through intermediaries; obtaining confirmation of claim receipt from payers; receiving and processing checks and remittance information from payers and documenting the result of payers' responses; evaluating denied claims and determining the best approach to appealing or re-submitting claims to obtain payment; billing patients for balances that are due; compiling and delivering management reporting about the performance of clients at both the account level and the provider level; transmitting key clinical data to the revenue cycle workflow to eliminate the need for code re-entry and to permit assembly of all key data elements required to achieve maximum appropriate reimbursement; and providing proactive and responsive client support to manage issues, address questions, identify training needs, and communicate trends.

athenaCollector is offered as a stand-alone solution for revenue cycle and practice management; athenaCollector for Hospitals and Health Systems is offered as a stand-alone revenue cycle solution for hospital clients. In addition, our revenue cycle services are integrated with more comprehensive offerings: athenaOne and athenaOne for Hospitals and Health Systems, respectively. Certain legacy clients may purchase advanced analytical and reporting tools to supplement the native athenaCollector reporting suite. These additional tools were previously offered separately as athenaCoordinator Analytics, but that service is no longer offered on a stand-alone basis.

Electronic Health Records

athenahealth's cloud-based EHR service is known as athenaClinicals. athenaClinicals is designed to make the documentation and exchange of health information easier by centering the workflow around the patient visit. This service encourages delegation by intelligently surfacing relevant clinical content based on physician behavior across the network, and helps with tedious administrative work associated with managing orders and results. It entered general availability in 2006 and was made available as a stand-alone service in 2010.

athenaClinicals addresses the core clinical workflows of a practice including: a clinical facesheet; encounter documentation; order entry; results viewing; patient call tracking; clinical reminder tracking; and workflow task management. athenaClinicals displays key clinical measures related to the drivers of high-quality, efficient care delivery, lab results requiring review, patient referral requests, prescription requests, patient histories, and summaries of previous exams documented using athenaClinicals. Our cloud-based platform features robust clinical reporting and enables health information exchange so patients can smoothly transition across care settings, which is further enabled by the network effect of athenaNet.

Our unique, powerful quality management engine is continuously updated with clinical guidelines and rules. As reporting and quality programs have collectively become a greater portion of physician revenue, clinical data must be captured according to the requirements and incentives of different payers and plans. Our quality management engine is designed to: identify the specific clinical activities required to meet Pay-for-Performance and outcome-based programs, including the Medicare and Medicaid Meaningful Use and Physician Quality Reporting System, programs, access medication formularies, and identify potential medication errors (such as drug-to-drug interactions or drug-allergy reactions). In an effort to drive continuous improvement, our quality management team proactively monitors client performance throughout the year, compares it to national benchmarks, and recommends ways to

optimize our clients' performance based on clinical workflow best practices and our analysis of thousands of providers across the network.

Health systems and medical groups that use an EHR can still receive a substantial number of paper clinical documents from third parties, creating a significant administrative burden. Our service operations team captures inbound paper documents, converts them to electronic format, attaches them to the appropriate patient chart, classifies them according to type, and associates results with the original order where applicable. Additionally, even if the provider creates an order in the EHR, the intended recipient may not accept orders electronically; in that case, our service operations team converts the electronically generated order to paper for delivery on the client's behalf. We also perform many of the Pay-for-Performance program identification and enrollment tasks on behalf of clients so they can participate without significant upfront research and effort. In addition, we have worked with the National Committee for Quality Assurance, to have our services approved for automatic credit scores that are transferable to eligible client practices submitting for Patient-Centered Medical Home recognition.

Table of Contents

athenahealth also offers an EHR service to clients who provide care in the acute care setting – athenaClinicals for Hospitals and Health Systems – which transforms the core athenaClinicals services so that they are appropriate for the additional requirements of a non-ambulatory setting. Both athenaClinicals and athenaClinicals for Hospitals and Health Systems are also offered as part of comprehensive solutions: athenaOne and athenaOne for Hospitals and Health Systems, respectively.

Patient Engagement

athenahealth's cloud-based patient engagement and communication service, known as athenaCommunicator, entered general availability in 2010 and continues to help providers deepen their relationships with their patients. This service offers a unique approach to patient communication by combining a web-based automated messaging platform and patient portal with the ability to speak to live operators for patients who receive specific call types. The automated messaging platform delivers phone calls, SMS messages, and e-mails to patients, including appointment reminders, past due balance alerts, disease management initiatives, secure test results, and other compliance-driven campaigns. Our patient portal enables patients to express communication preferences, view lab results, review appointment information, exchange secure messages with providers, update personal information, and pay bills. Clients who also use athenaClinicals can choose to allow their patients to view specific portions of their medical record via the patient portal. athenaCommunicator enables clients to build a highly flexible set of communication rules with their patients. They can set patient or group-specific communication preferences that will automatically tailor communications to the preferred timing and mode of delivery, including phone call, SMS message, e-mail, or patient portal. Additionally, we print and mail paper statements to patients on behalf of the client to assist with patient payment collection. Collectively, these activities expand the availability of the medical practice to patients and help alleviate the burden of administrative communications, freeing staff to focus on more critical tasks.

Order Transmission

athenaCoordinator is athenahealth's EHR-agnostic, cloud-based order transmission service, which entered general availability in 2012. While most clients who use athenaClinicals are included in the receiver network, clients also include stand-alone facilities that receive orders via a "lite" portal to streamline receipt from their senders. athenaCoordinator moves patients and their information seamlessly across care settings, regardless of EHR or organizational boundaries, with direct scheduling available between providers. athenahealth teams build and manage all interfaces and connections, giving providers immediate access to a network of over 112,000 provider and care entities, including nearly every national lab, pharmacy, and registry. Providers get key patient and referral data exactly when it is needed, helping to eliminate time-consuming work associated with coordinating care. Through athenaCoordinator, clients gain visibility into patient care occurring outside of their organization, and patients are able to experience better access, quality and convenience. Organizations can access a rapidly growing marketplace of industry-leading, integrated third-party applications designed to improve performance.

Patient Access and Care Coordination

athenaCoordinator Enterprise is athenahealth's cloud-based care coordination, patient access, and order transmission service. It was first offered in 2011 after the acquisition of Proxsys, LLC. athenaCoordinator Enterprise is targeted at health systems navigating the difficult and costly work associated with coordinating care among multiple providers and trading partners in order to manage diverse populations of patients. This service enables smooth transitions in care, with direct scheduling across the client's organization and secure mobile and desktop messaging for provider collaboration.

athenaCoordinator Enterprise delivers more control and cuts down on work by streamlining and automating workflows. athenahealth's service teams perform tasks that typically burden clients, including insurance verification,

financial clearance, pre-certification, and referral authorization, in an effort to create workflow efficiencies and free up staff time and resources. athenaCoordinator Enterprise facilitates easy order entry and status checks for ordering providers. This service also supports patient access by enabling clients to directly schedule patients for appointments with trading partners that use athenaCollector to manage appointments and aggregates data from disparate EHRs to create a shared view of each patient's clinical and financial information.

Population Health Management

athenaCommunicator Enterprise is athenahealth's population health management service. This comprehensive, cloud-based service combines software and analytics to execute, track, and coordinate care across a provider's network. After clients transfer data from payers, finance systems, laboratories, clinical repositories, and/or EHRs, athenaCommunicator Enterprise processes and integrates that data and provides a platform through which clients can glean important insight into and manage the health of their patient population. athenahealth began offering population health management services in 2012 after the acquisition of Healthcare Data Services LLC.

Table of Contents

Clinical Decision Support

In addition to providing native decision support functionality into its suite of service offerings, athenahealth also offers stand-alone applications to providers at the point of care. These services, provided through the Epocrates brand, center around a variety of clinical information and decision support offerings available through health care providers' mobile devices. Epocrates services include: drug and disease information, medical calculator and tools, clinical guidelines, clinical messaging, market research, and formulary hosting. athenahealth began offering clinical decision support services through the acquisition of Epocrates in 2013. The majority of health care professionals using our clinical information services access the free versions of our applications; premium subscriptions for some of these services are available, and some services are sponsored by clients in the health care industry (e.g., pharmaceutical companies, managed care companies, and market research firms) that seek opportunities to engage with our network of members. The Epocrates network of members consists of over one million health care professionals, including approximately 50% of U.S. physicians. The features available through our Epocrates application help health care professionals make more informed prescribing decisions, improve workflow, and enhance patient safety.

Research and Development

In response to changes in the market, and to better serve medical groups and health systems, our research and development efforts focus on enhancing our service offerings. All of our clients use the same version of athenaNet, with some rules designed to take effect locally for particular clients. We continually update our software and rules, and execute frequent, periodic releases of new software functionality for our clients. Our software development life cycle methodology ensures that each software release is properly designed, built, tested, and rolled out. Our software development technologists are primarily located in the United States; we complement this team's work with software development services from third-party technology development providers, as well as our own employees at our development center operated through our subsidiaries in India. In addition to our core software development activities, we dedicate full-time staff to our ongoing development and maintenance of our rules database. We also employ program management and product management personnel, who work continually on improvements to our service operations processes and our service design, respectively.

Operations

Our operations team assists clients at each critical step in the revenue, clinical, patient engagement, and care coordination workflow, and provides services that include insurance benefits packaging, insurance eligibility confirmation, claims submission, claims tracking, remittance posting, denials management, payment processing, formatting and submission of lab requisitions, and monitoring and classification of all inbound faxes. Additionally, we use third parties for data entry, data matching, data characterization, and outbound and inbound telephone services. We depend on satisfied clients to succeed, and have aligned our financial goals with that of our clients. Our client contracts require minimum commitments by us on a range of tasks, including claims submission, payment posting, claims tracking, and claims denial management. We also make a commitment to our clients that athenaNet will be accessible 99.7% of the time, excluding scheduled maintenance windows. Each quarter, our management conducts a survey of clients to identify client concerns and track progress against client satisfaction objectives. In our most recent survey, our net promoter score was 40.7. The net promoter score is the percentage of clients who chose 9 or 10 (defined as promoters) less the percentage of clients who chose 0 through 6 (defined as detractors) on a scale of 1 to 10 when asked if they would recommend our services to a trusted friend or colleague.

In addition to the services described above, we also provide client support services, including:

- client support by our client services center, designed to address client questions and concerns rapidly, whether those questions and concerns are registered via a phone call or via an online support case through use of customer relationship management technology;
- account performance monitoring by the account management organization to address open issues and focus clients on the financial results of the co-sourcing relationship; these activities are intended to aid in client performance and retention, determine appropriate adjustments to service pricing at renewal dates, inform clients of the full suite of our services, and provide incremental services when appropriate;

relationship management by regional leaders of the client services organization to ensure that decision-makers are satisfied, and that regional performance is managed proactively with regard to client satisfaction, client margins, client retention, renewal pricing, and added services; and active, real-time performance monitoring for clients with complex and highly-scaled operations.

7

Table of Contents

Sales and Marketing

We have developed sales and marketing capabilities aimed at expanding our network of health care providers, medical groups, and health systems. We expect to expand our network by selling our complete suite of services to new clients and cross-selling additional services into our existing client base. We have a direct sales force, which we augment through our channel partners and marketing initiatives.

Direct Sales

We sell our services primarily through our direct sales force, which is divided into four groups for sales of athenahealth-branded services: the enterprise team, which is dedicated to serving the very largest managed care organizations, as well as those with high growth potential; the group team, which is dedicated to medical practices with seven to 150 physicians; the small group team, which is dedicated to practices with one to six physicians; and the hospital team, which is dedicated to hospitals and hospital-owned clinics and medical groups with 50 beds or less. We also have sales teams dedicated to sales of our Epocrates-branded services for pharmaceutical and other institutional clients. Our sales force is supported by personnel in our marketing organization, who provide specialized support for promotional and selling efforts. Due to our ongoing service relationship with clients, we conduct a consultative sales process, which includes understanding the needs of prospective clients, developing service proposals, and negotiating contracts to enable the commencement of services.

Channel Partners

In addition to our direct sales force, we maintain business relationships with third parties that promote or support our sales or services within specific industries or geographic regions. We refer to these third parties as “channels” and the individuals and organizations involved as our “channel partners.” In most cases, these relationships are agreements that compensate channel partners for providing us sales lead information that results in sales. These channel partners typically do not make direct sales. Other channel relationships permit third parties to act as an independent sales representative, a purchasing agent (as in the case of group purchasing organizations), or a joint marketer of combined service offerings that we jointly develop with that third party. In some instances, the channel relationship involves endorsement or promotion of our services by these third parties. Our channel relationships include our clients, state medical societies, health care information technology product companies, health care product distribution companies, consulting firms, group purchasing organizations, health systems, regional extension centers, and payers.

Marketing and Awareness Initiatives

Our marketing and sales objectives are designed to increase awareness of our company, establish the benefits of our service model, and build credibility with prospective clients so they will view our company as a trustworthy long-term service provider. To execute on this strategy, we have designed and implemented specific activities and programs aimed at converting leads to new clients. In addition, we use the Epocrates member network as a lead-generation platform for selling our athenahealth-branded services.

Our marketing and awareness initiatives are generally targeted toward specific segments of the health care market.

These marketing programs include:

- television, print, and digital advertising;
- sponsored pay-per-click search advertising and other Internet-focused awareness-building efforts (such as social media, online videos, webinars, targeted messages to users through our services, and destination websites covering compliance and other issues of interest to medical practices);
- public relations activities aimed at generating media coverage;
- thought leadership through blog posts, opinion pieces, and speaking engagements;
- participation in industry-focused trade shows;
- targeted mail, e-mail, and phone calls to health systems and medical groups;
- informational meetings (such as strategic retreats with targeted potential clients); and
- dinner seminars.

Competition

We have experienced, and expect to continue to experience, intense competition in the marketplace. Our primary competition uses locally-installed software to manage the various clinical and financial workflow needs within the medical group or health system. Other nationwide competitors offer services they refer to as “on-demand” or

“software-as-a-service” models, under which software is centrally hosted and services are provided from central locations. Companies that sell practice management, EHR, care coordination software and services, and/or population health management services include: AdvancedMD, Inc.; Allscripts Healthcare Solutions, Inc.; CareCloud Corporation; Cerner Corporation; eClinicalWorks, LLC;

8

Table of Contents

Epic Systems Corporation; Greenway Health, LLC; McKesson Corp.; NextGen Healthcare Information Systems, LLC; Optum, Inc.; Practice Fusion, Inc.; Quality Systems, Inc.; and SCI Solutions, Inc.

The principal competitive factors in our industry include:

- ability to quickly adapt to the increasing complexity of the health care reimbursement system;
- size and scope of payer rules knowledge;
- ability to introduce only relevant rules into the workflow at the point of care;
- ease of use and rates of user adoption;
- product functionality and scope of services;
- scope of network connections to support electronic data interactions;
- performance, security, scalability, and reliability of service;
- sales and marketing capabilities of the vendor; and
- financial stability of the vendor.

We believe that we compete favorably with our competitors on the basis of these factors. However, some of our competitors and potential competitors have significantly greater financial, technological, and other resources and name recognition, as well as more established distribution networks and relationships with health care providers. As a result, these companies may respond more quickly to new or emerging technologies and standards and changes in customer requirements. These companies may be able to invest more resources than we can in research and development, strategic acquisitions, sales and marketing, patent prosecution and litigation, and to finance capital equipment acquisitions for their customers.

Our Epocrates-branded services compete for users of the types of clinical reference tools that we offer and for budget dollars from pharmaceutical, managed care, and market research clients. Competitors providing clinical content include Medscape, a division of WebMD, LLC, and UpToDate, Inc., a division of Wolters Kluwer Health. The primary competition for pharmaceutical promotional spend comes from companies, such as WebMD, that offer other marketing channels to health care professionals. We compete primarily on our ability to reach and communicate with health care professionals under the Epocrates brand, which is recognized and endorsed among health care professionals as a trusted and accurate source of drug and clinical information; the breadth and loyalty of this large and active network is not easily replicated, and it enhances our ability to market our sponsored services.

Government Regulation

Although we generally do not contract with U.S. state or local government entities, the services we provide are subject to a complex array of federal and state laws, including regulation by the Centers for Medicare and Medicaid Services (“CMS”) of the HHS, as well as additional regulation.

Government Regulation of Health Information

HIPAA Privacy and Security Rules. The Health Insurance Portability and Accountability Act of 1996, as amended, and the regulations that have been issued under it (collectively, “HIPAA”) contain substantial restrictions and requirements with respect to the use and disclosure of individuals’ protected health information. These are embodied in the Privacy Rule and Security Rule portions of HIPAA. The HIPAA Privacy Rule prohibits a covered entity from using or disclosing an individual’s protected health information unless the use or disclosure is authorized by the individual or is specifically required or permitted under the Privacy Rule. Under the HIPAA Security Rule, covered entities must establish administrative, physical, and technical safeguards to protect the confidentiality, integrity, and availability of electronic protected health information maintained or transmitted by them or by others on their behalf. The HIPAA Privacy and Security Rules apply directly to covered entities, such as health care providers who engage in HIPAA-defined standard electronic transactions, health plans, and health care clearinghouses. Because we translate electronic transactions to and from the HIPAA-prescribed electronic forms and other forms, we are a covered entity in our capacity as a clearinghouse. In other capacities where we create, receive, maintain, or transmit protected health information on behalf of our clients or other parties, we serve as a business associate. HIPAA generally requires the execution of business associate agreements to ensure that the business associate will appropriately safeguard protected health information. Our business associate agreements obligate us to provide adequate written assurances that we will properly safeguard the privacy and security of protected health information exchanged pursuant to each agreement.

We also must enter into business associate agreements with entities who act as business associates for us, to clarify and limit the business associates' permissible uses of protected health information.

HIPAA Transaction Requirements. HIPAA also requires that certain electronic transactions related to health care billing must be conducted using prescribed electronic formats. As a covered entity subject to HIPAA, we must meet these

9

Table of Contents

requirements, and, moreover, we must structure and provide our services in a way that supports our clients' HIPAA compliance obligations.

HITECH Act and HIPAA Omnibus Rule. The HITECH Act, the regulations issued under it, and the corresponding amendments to the HIPAA regulations in the HIPAA Omnibus Rule, have altered and enhanced our obligations with respect to protected health information.

State Laws. In addition to HIPAA and the HITECH Act, most states have enacted laws related to the security of confidential medical information. Such state laws, if more stringent than HIPAA and the HITECH Act, are not preempted by the federal requirements, and we must comply with them.

Government Regulation of Reimbursement

Our clients are subject to regulation by a number of governmental agencies, including those federal and state agencies that administer the Medicare and Medicaid programs. Given the breadth of these laws, they are potentially applicable to our business activities, including the transactions that we undertake on behalf of our clients and the financial arrangements through which we market, sell, and distribute our services. Accordingly, we are sensitive to legislative and regulatory changes in, and limitations on, the government health care programs and changes in reimbursement policies, processes, and payment rates. During recent years, there have been numerous legislative and administrative actions that have affected government programs. It is possible that federal or state governments will implement future reductions, increases, or changes in reimbursement under government programs that adversely affect our business, our client base, or our cost of providing our services.

Fraud and Abuse

A number of federal and state laws prohibit a variety of activities that could result in excessive expenditure of funds on health care, such as the payment of kickbacks, fraudulent billing, and referrals for health care services where a conflict of interest exists. These laws, generally referred to as "fraud and abuse laws," include, but are not limited to: **Anti-Kickback Laws.** The federal Anti-Kickback Statute prohibits any person or entity from offering, paying, soliciting, or receiving anything of value, directly or indirectly, for the referral of patients or the leasing, purchasing, ordering, or arranging for or recommending the lease, purchase, or order of any item, good, facility, or service covered by a federal health care program, including Medicare or Medicaid. Courts have construed the federal Anti-Kickback Statute broadly to mean that a financial arrangement may violate this law if any one of the purposes of an arrangement is to encourage patient referrals or other federal health care program business, regardless of whether there are other legitimate purposes for the arrangement. There are several limited and narrow statutory exceptions and regulatory safe harbors that may protect some arrangements from enforcement penalties.

False or Fraudulent Claim Laws. There are numerous federal and state criminal and civil laws that prohibit, among other things, the submission of false information, or the failure to disclose information, in connection with the submission and payment of claims for reimbursement. In some cases, these laws also prohibit abuse in connection with such submission and payment, including, for example, by systematic over treatment or duplicate billing for the same services to collect increased or duplicate payments. How these concepts apply to services such as ours that rely substantially on automated processes has not been well defined in the regulations or relevant case law, particularly since false or fraudulent claim laws often contain a knowledge qualifier. Given the lack of legal authority on this issue, our errors with respect to the formatting, preparation, or transmission of claims, and certain mishandling by us of claims information that is supplied by our clients or other third parties, may be alleged, or determined to be, false claims under a false claims law.

ACA. In addition to the provisions relating to health care access, financing, and delivery, the ACA made changes to health care fraud and abuse laws. The ACA expands false claim laws, amends key provisions of other anti-fraud and abuse statutes, provides the government with new enforcement tools and funding for enforcement, and enhances both criminal and administrative penalties for noncompliance. The ACA may result in increased anti-fraud enforcement activities.

Stark Law. The Ethics in Patient Referrals Act, known as the Stark Law, prohibits certain types of referral arrangements between physicians and health care entities. Physicians are prohibited from referring patients for certain designated health services reimbursed under certain federal health care programs to entities with which they or their immediate family members have a financial relationship or an ownership interest, unless such referrals fall within a

specific exception. Reimbursement claims that we submit for care rendered under prohibited referrals could potentially violate the Stark Law, or be deemed false or fraudulent, resulting in liability under the Stark Law or other fraud and abuse laws.

Analogous State Laws. Many states have similar fraud and abuse laws, some of which may be broader in scope and may not be limited to items or services for which payment is made by a government health care program.

Table of Contents

Corporate Practice of Medicine Laws, Fee-Splitting Laws, and Anti-Assignment Laws

In many states, there are laws that prohibit non-licensed persons from practicing medicine, prevent corporations from employing licensed practitioners, and prohibit licensed medical practitioners from practicing medicine in collaboration with non-physicians, including business corporations. Some states also prohibit physicians from splitting their professional fees with non-physicians. In some cases, these laws have been interpreted to prevent business service providers from charging their physician clients on the basis of a percentage of the physician clients' collections or charges.

There are also federal and state laws that prohibit or limit assignment of claims for reimbursement from government-funded programs. Some of these laws limit the manner in which business service companies may handle payments for such claims and prevent such companies from charging their physician clients on the basis of a percentage of collections or charges. In particular, the Medicare program specifically requires that billing agents who receive Medicare payments on behalf of health care providers must meet certain requirements, and the agent's compensation may not be related in any way to the amount billed or collected or the actual collection of payment. Medicaid regulations similarly provide that Medicaid payments may be received by billing agents in the name of their clients without violating anti-assignment requirements if payment to the agent is related to the cost of the billing service, not related on a percentage basis to the amount billed or collected, and not dependent on collection of payment.

Electronic Prescribing Laws

States have differing prescription format and signature requirements. Due in part to recent industry initiatives, federal law and the laws of all 50 states now permit the electronic transmission of prescription orders. In addition, effective on January 1, 2006, the HHS promulgated its final E-Prescribing and the Prescription Drug Program regulations. These regulations, issued pursuant to the Medicare Prescription Drug Improvement and Modernization Act of 2003 ("MMA"), consist of detailed standards and requirements, in addition to the HIPAA standards discussed previously, for prescription and other information transmitted electronically in connection with a drug benefit covered by the MMA's Prescription Drug Benefit. These standards cover not only transactions between prescribers and dispensers for prescriptions but also electronic eligibility and benefits inquiries and drug formulary and benefit coverage information. Aspects of our services are affected by such regulation, as our clients need to comply with these requirements. To the extent states have specific legal requirements which include state approval of the systems used to transmit electronic prescriptions, athenaClinicals has been approved.

Anti-Tampering Laws

For certain prescriptions that cannot or may not be transmitted electronically from physician to pharmacy, both federal and state laws require that the written forms used exhibit anti-tampering features. For example, the U.S. Troop Readiness, Veterans' Care, Katrina Recovery, and Iraq Accountability Appropriations Act of 2007 require that most prescriptions covered by Medicaid must demonstrate security features that prevent copying, erasing, or counterfeiting of the written form. Because our clients will, on occasion, need to use printed forms, we must take these laws into consideration for purposes of the prescription functions of our athenaClinicals service.

Electronic Health Records Certification Requirements

The HITECH Act directs the Office of the National Coordinator for Health Information Technology ("ONCHIT") to support and promote meaningful use of certified EHR technology nationwide through the adoption of standards, implementation specifications, and certification criteria programs. In January 2011, HHS issued a final rule to establish a permanent certification program for EHR technology. Our athenaClinicals service has been certified as a 2014 Edition Complete EHR in accordance with the applicable certification criteria.

United States Food and Drug Administration

The U.S. Food and Drug Administration ("FDA") has promulgated a draft policy for the regulation of computer software products as medical devices and a proposed rule for reclassification of medical device data systems under the Federal Food, Drug and Cosmetic Act, as amended ("FDCA"). The FDA has stated that health information technology software is a medical device under the FDCA, and we expect that the FDA is likely to become increasingly active in regulating computer software intended for use in health care settings regardless of whether the draft policy or proposed rule is finalized or changed. In April 2014, a draft report developed by the FDA was released proposing a

regulatory framework for health information technology that promotes innovation, protects patient safety, and avoids regulatory duplication.

If our computer software functionality is considered a medical device under the FDCA, we could be subject to additional regulatory requirements. FDA regulations govern, among other things, product development, testing, manufacturing, packaging, labeling, storage, clearance or approval, advertising and promotion, sales and distribution, and import and export. FDA requirements with respect to devices that are determined to pose lesser risk to the public include:

- establishment registration and device listing with the FDA;

Table of Contents

the Quality System Regulation (“QSR”), which requires manufacturers, including third-party or contract manufacturers, to follow stringent design, testing, control, documentation, and other quality assurance procedures during all aspects of manufacturing;

- labeling regulations and FDA prohibitions against the advertising and promotion of products for uncleared, unapproved off-label uses and other requirements related to advertising and promotional activities;
- medical device reporting regulations, which require that manufacturers report to the FDA if their device may have caused or contributed to a death or serious injury or malfunctioned in a way that would likely cause or contribute to a death or serious injury if the malfunction were to recur;
- corrections and removal reporting regulations, which require that manufacturers report to the FDA any field corrections and product recalls or removals if undertaken to reduce a risk to health posed by the device or to remedy a violation of the FDCA that may present a risk to health; and
- post-market surveillance regulations, which apply when necessary to protect the public health or to provide additional safety and effectiveness data for the device.

Non-compliance with applicable FDA requirements can result in, among other things, public warning letters, fines, injunctions, civil penalties, recall or seizure of products, total or partial suspension of production, failure of the FDA to grant marketing approvals, withdrawal of marketing approvals, and criminal prosecutions.

Foreign Regulations

Our subsidiary in Chennai, India, is subject to additional regulations by the Government of India, as well as its regional subdivisions. These regulations include Indian federal and local corporation requirements, restrictions on exchange of funds, employment-related laws, and qualification for tax status and tax incentives.

Intellectual Property

We rely on a combination of intellectual property laws, as well as confidentiality procedures and contractual provisions, to protect our proprietary technology, databases, and our brand. We have filed U.S. and international patent applications covering certain of our proprietary technology. As of December 31, 2015, we held fourteen U.S. patents and two foreign patents, with a number of U.S. patent applications and foreign patent applications pending. Our issued U.S. patents are expected to expire between 2020 and 2031. We also rely on a combination of registered and unregistered trademarks and service marks to protect our brand. We will continue to file and prosecute applications for patents and trademarks when and where appropriate to protect our rights in proprietary technologies and our brand.

While our patents, trademarks, copyrights, and trade secrets provide some advantage and protection, we believe the following factors are more essential to establishing and maintaining a competitive advantage:

- the statistical and technological skills of our service operations and research and development teams;
- the health care domain expertise and payer rules knowledge of our service operations and research and development teams;
- the real-time connectivity of our service offerings;
- the continued expansion of our proprietary rules engine; and
- a continued focus on the improved financial, operational, and clinical results of our clients.

We have a policy of requiring employees and consultants to execute confidentiality agreements upon the commencement of an employment or consulting relationship with us. Our employee agreements also require relevant employees to assign to us all rights to any inventions made or conceived during their employment with us. In addition, we have a policy of requiring individuals and entities with which we discuss potential business relationships to sign non-disclosure agreements. Our agreements with clients include confidentiality and non-disclosure provisions.

Seasonality

There is moderate seasonality in the activity level of health systems and medical groups and our clients in the pharmaceutical industry. Typically, discretionary use of physician services declines in the late summer and during the holiday season, which leads to a decline in collections by our physician clients about 30 to 50 days later. Our pharmaceutical clients’ budgeting process impacts the timing of revenue related to sales of sponsored clinical information and decision support services, which has historically been highest in the fourth quarter. In addition, as further explained in “Risk Factors” in Item 1A of Part I of this Annual Report on Form 10-K, our revenues and

operating results may fluctuate from quarter to quarter depending on a host of factors including, but not limited to, the severity, length, and timing of seasonal and pandemic illnesses.

Table of Contents

Employees

As of December 31, 2015, we had 4,668 full-time employees, with 2,296 in service operations, 668 in sales and marketing, 1,280 in research and development, and 424 in general and administrative functions. Of these full-time employees, 3,973 were located in the U.S. and 695 were located in India. We believe that we have good relationships with our employees. None of our employees are subject to collective bargaining agreements or are represented by a union.

Financial Information

The financial information required under this Item 1 is incorporated herein by reference to Item 8 of this Annual Report on Form 10-K.

Where You Can Find More Information

Our Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K, including exhibits, proxy and information statements and amendments to those reports filed or furnished pursuant to Section 13(a), 14, and 15(d) of the Securities Exchange Act of 1934, as amended, are available through the “Investors” portion of our website (www.athenahealth.com) free of charge as soon as reasonably practicable after we electronically file such material with, or furnish it to, the Securities and Exchange Commission (“SEC”). Information on our website is not part of this Annual Report on Form 10-K or any of our other securities filings unless specifically incorporated herein by reference. The public may read and copy these materials at the SEC’s Public Reference Room at 100 F Street, NE, Washington, DC 20549. The public may obtain information on the operation of the Public Reference Room by calling the SEC at 1-800-SEC-0330. In addition, our filings with the SEC may be accessed through the SEC’s Interactive Data Electronic Applications (“IDEA”) system at www.sec.gov. All statements made in any of our securities filings, including all forward-looking statements or information, are made as of the date of the document in which the statement is included, and we do not assume or undertake any obligation to update any of those statements or documents unless we are required to do so by law.

Item 1A.

Risk Factors.

Our operating results and financial condition have varied in the past and may vary significantly in the future depending on a number of factors. Except for the historical information in this report, the matters contained in this report include forward-looking statements that involve risks and uncertainties. The following factors, among others, could cause actual results to differ materially from those contained in forward-looking statements made in this report and presented elsewhere by management from time to time. Such factors, among others, may have a material adverse effect upon our business, results of operations, and financial condition.

RISKS RELATED TO OUR BUSINESS — GENERAL

We operate in a highly competitive industry, and if we are not able to compete effectively, our business and operating results will be harmed.

The provision by third parties of medical billing and practice management services to medical practices has historically been dominated by small service providers who offer highly individualized services and a high degree of specialized knowledge applicable in many cases to a limited medical specialty, a limited set of payers, or a limited geographical area. We anticipate that the software, statistical, and database tools that are available to such service providers will continue to become more sophisticated and effective and that demand for our services could be adversely affected.

EHR and practice management software for health systems and medical groups has historically been dominated by large, well-financed, and technologically sophisticated entities that have focused on software solutions. Some of these entities are now offering “hosted” services or a “software-as-a-service” model under which software is centrally administered, and these vendors may also provide administrative and billing services. The size, financial strength, and breadth of offerings of the larger entities are increasing as a result of continued consolidation in both the information technology and health care industries. We expect large integrated technology companies to continue to become more active in our markets, both through acquisition and internal investment. As costs fall and technology improves, increased market saturation may change the competitive landscape in favor of competitors with greater scale than we possess. In addition, a few smaller companies have started providing single-instance, Internet-based software using a model similar to ours; the offerings of these smaller companies may reduce the perceived competitive advantage of

our services and impact our market share. Further, while the market for patient engagement, population health and care coordination services is growing and is not as yet dominated by a small group of vendors with significant resources, our patient engagement, population health, and care coordination services face competition from a wide variety of market participants. For example, certain health systems have developed their own patient portals, care

Table of Contents

coordination systems. If we fail to distinguish our patient engagement, population health, and care coordination offerings from the other options available to health care providers, the demand for and market share of those offerings may decrease.

In regard to our Epocrates-branded services, we compete with other companies for users of the types of drug and clinical reference tools that we offer and for budget dollars from our pharmaceutical, managed care, and market research clients. We compete within a broad industry of health care content providers for the attention of health care professionals who can choose to use mobile, online or print media to reference clinical information. Companies providing clinical content include Medscape, a division of WebMD, LLC, and UpToDate, Inc., a division of Wolters Kluwer Health. Competition from each of these sources of clinical reference content may lead to a loss of our existing network members and a reduction in the rate at which we attract new members for our clinical information. Our primary competition for the promotional spend available from our pharmaceutical clients in the area of interactive services is from companies, including WebMD, that help such companies market their products, programs, and services to health care professionals. Our market research business competes with numerous companies that recruit physicians to participate in surveys in a variety of formats, as well as the recruitment arms of market research companies that have assembled their own survey panels of health care professionals. To the extent competing channels are available to access health care professionals, including physicians, the value of our interactive services to our clients is reduced.

Some of our current large competitors, such as Allscripts Healthcare Solutions, Inc.; Cerner Corporation; Epic Systems Corporation; McKesson Corp.; NextGen Healthcare Information Systems, LLC; and Quality Systems, Inc., have greater name recognition, longer operating histories, and significantly greater resources than we do. As a result, our competitors may be able to respond more quickly and effectively than we can to new or changing opportunities, technologies, standards, or client requirements. We expect to face new competitors as we continue to develop and offer services for the inpatient market. In addition, current and potential competitors have established, and may in the future establish, cooperative relationships with vendors of complementary products, technologies, or services to increase the availability of their products to the marketplace. Current or future competitors may consolidate to improve the breadth of their products, directly competing with our integrated offerings. Accordingly, new competitors or alliances may emerge that have greater market share, larger client bases, more widely adopted proprietary technologies, broader offerings, greater marketing expertise, greater financial resources, and larger sales forces than we have, which could put us at a competitive disadvantage. Further, in light of these advantages, even if our services are more effective than the product or service offerings of our competitors, current or potential clients might accept competitive products and services in lieu of purchasing our services. Increased competition is likely to result in pricing pressures, which could negatively impact our sales, profitability, or market share. In addition to new niche vendors, who offer stand-alone products and services, we face competition from existing enterprise vendors, including those currently focused on software solutions, which have information systems in place with clients in our target markets. These existing enterprise vendors may now, or in the future, offer or promise products or services with less functionality than our services, but that offer ease of integration with existing systems and that leverage existing vendor relationships.

If we are unable to retain existing members of our Epocrates network and attract new members, especially physician members with desired characteristics for our interactive services who actively participate in those services, our revenue will decline, the anticipated benefits of our Epocrates acquisition may not be realized, and our business will suffer.

Members of our Epocrates network who subscribe to our premium drug and clinical reference products usually do so for a term of one year and may elect to cancel the subscription for any renewal terms. Under certain circumstances, our members may cancel their subscriptions prior to expiration. Factors that may affect the retention rate of our existing members and the rate at which we attract new members for our drug and clinical reference tools include:

Service Relevance. Unless we are able to provide current, relevant, and reliable health care content, drug and clinical reference tools, formulary hosting, and other services that meet and continue to meet the needs of health care professionals, including physicians, the value of those services to new and existing members will decrease. Our provision of such services depends on our ability to hire and retain qualified physician and pharmacist editors and

authors, license accurate and relevant content from third parties, contract with health plans and insurers to host formulary information, monitor and respond to changes in member interest in specific topics, and develop new or enhanced services. If we cannot meet our staffing needs or develop or acquire needed content at a reasonable cost, if there are errors or omissions in such content, if our competitors obtain exclusive access to or develop content that health care professionals consider superior to ours, or if we cannot meet the needs of our members, the value of our content and services would diminish.

Brand Reputation. The reputation of our Epocrates brand is dependent in large part on the medical community's continued perception of us as independent from our health care industry clients, particularly pharmaceutical companies. If health care professionals believe that we are too closely associated with such clients as a result of the revenue we receive from their purchase or sponsorship of our interactive services, the credibility of our brand will diminish. We cannot assure you that the medical community will view our content as sufficiently unbiased. If the

Table of Contents

reputation of our brand is damaged, it will be difficult, expensive and time-consuming to restore the quality of our brand with health care professionals and our business could suffer.

Competitive Landscape. If the developers of mobile operating systems and mobile devices with which our products and services are compatible fail to remain competitive in the marketplace and to be adopted into medical practice and practice workflow, members will be less inclined to use our services. The availability, price, performance, and functionality of competing products and services, including mobile, Web-based, and traditional products and services offered by competitors or through online resources and searches may affect our retention rate and the rate at which we attract new members for our drug and clinical reference tools. The availability of download sites such as the Apple App StoreSM that offer numerous free or low-priced competing products at one location has also reduced the demand for our paid subscription products. We expect the use of such sites to expand, reducing the number of paying members for our drug and clinical reference tools as a percentage of total members.

In addition to the loss of subscription revenue, our inability to attract or retain members, especially physician members with desired characteristics, such as specialty and prescribing habits, who update their mobile devices through our servers with sufficient frequency, may cause an even more significant decline in revenue from our interactive services. Our market research, payer, and pharmaceutical clients are attracted to our large, engaged member network for the delivery of their clinical messages, formularies, and other sponsored content, and, without sufficient active members who meet desired criteria, those clients may reduce their subscription for our interactive services, and our revenue may decline.

Even if the number of our members is not materially reduced, their participation in our services may decrease, which could impact our revenues. We have established limits on the number and the mix of sponsored and non-sponsored messages delivered to members in order to promote the quality of members' experience with our services. If an insufficient number of members update during a given service period, or the demand for promotional clinical messaging sponsorship exceeds the available supply, our health care clients could become dissatisfied with our service. As a result, we may be unable to grow our interactive services revenue beyond the bounds we have set, as changes to such limits could cause our members to be dissatisfied with our services and the response to our interactive services to decrease. Furthermore, if our members generally become less responsive to participating in our services, the value of these interactive services will likely decline. This could cause our revenue to remain flat or to decline. Finally, if there is a reduction in the number of network members or their participation in our services, certain anticipated benefits of our acquisition of Epocrates, such as increased name recognition and reputation, cross-sell potential, and the market acceptance of joint services may not be fully realized, if at all.

The market for cloud-based services for health care information technology may not develop substantially further or develop more slowly than we expect, harming the growth of our business.

The market for cloud-based services for health care information technology remains narrowly based, and it is uncertain whether these services will achieve and sustain the high levels of demand and market acceptance we anticipate. Our success will depend to a substantial extent on the willingness of enterprises, large and small, to increase their use of cloud-based services in general, and for their revenue, clinical, and patient cycles in particular. Many enterprises have invested substantial personnel and financial resources to integrate established enterprise software into their businesses and therefore may be reluctant or unwilling to switch to a cloud-based service. Furthermore, some enterprises may be reluctant or unwilling to use cloud-based services, because they have concerns regarding the risks associated with the security and reliability, among other things, of the technology delivery model associated with these services. If enterprises do not perceive the benefits of our services, then the market for these services may not expand as much or develop as quickly as we expect, either of which would significantly adversely affect our business, financial condition, or operating results.

Changes in the health care industry could affect the demand for our services, cause our existing contracts to terminate, and negatively impact the process of negotiating future contracts.

As the health care industry evolves, changes in our member, client, and vendor bases may reduce the demand for our services, result in the termination of existing contracts, and make it more difficult to negotiate new contracts on terms that are acceptable to us. For example, the current trend toward consolidation of health care providers within hospital systems may cause our existing client contracts to terminate as independent practices are merged into hospital

systems. Such larger health care organizations may also have their own practice management services and health IT systems, reducing demand for our services. Similarly, client and vendor consolidation results in fewer, larger entities with increased bargaining power and the ability to demand terms that are unfavorable to us. If these trends continue, we cannot assure you that we will be able to continue to maintain or expand our client base, negotiate contracts with acceptable terms, or maintain our current pricing structure, and our revenues may decrease.

Table of Contents

General reductions in expenditures by health care companies, or reductions in such expenditures within market segments that we serve, could have similar impacts with regard to our interactive services. Such reductions may result from, among other things, reduced governmental funding for health care; a decrease in the number of, or the market exclusivity available to, new drugs coming to market; government regulation or private initiatives that affect the manner in which health care providers interact with patients, pharmaceutical companies, payers, or other health care industry participants (e.g., limitations on advertising to physicians or required disclosure of payments made to them); or adverse changes in business or economic conditions affecting health care payers or providers, the pharmaceutical industry, or other health care companies that subscribe for our interactive services (e.g., changes in the design of health plans). Any of these changes could reduce the purchase of our services by such interactive services clients, reducing our revenue and possibly requiring us to materially revise our offerings. In addition, our interactive services clients' expectations regarding pending or potential industry developments may also affect their budgeting processes and spending plans with respect to services of the types we provide.

If we do not continue to innovate and provide services that are useful to clients and users, we may not remain competitive, and our revenues and operating results could suffer.

Our success depends on our ability to keep pace with technological developments, satisfy increasingly sophisticated client and user requirements, and sustain market acceptance. Our competitors are constantly developing products and services that may become more efficient or appealing to our clients or users. As a result, we must continue to invest significant resources in research and development in order to enhance our existing services and introduce new high-quality services that clients and users will want, while offering these services at competitive prices. If we are unable to predict user preferences or industry changes, or if we are unable to modify our services on a timely or cost-effective basis, we may lose clients and users. Our operating results would also suffer if our innovations are not responsive to the needs of our clients and users, are not appropriately timed with market opportunity, or are not effectively brought to market. As technology continues to develop, our competitors may be able to offer results that are, or that are perceived to be, substantially similar to or better than those generated by our services. This may force us to compete on additional service attributes and to expend significant resources in order to remain competitive. Failure to manage our growth effectively could increase our expenses, decrease our revenue, and prevent us from implementing our business strategy.

We have been experiencing a period of strong growth. We believe that increasing awareness of our brand in a cost-effective manner is critical to achieving widespread adoption of our services. Promotional activities may not generate an increase in awareness or revenue, and even if they do, any increase in revenue may not offset the expenses we incur in building awareness. Besides awareness, we must continue to maintain, and may need to enhance, our information technology infrastructure and financial and accounting systems and controls, as well as manage expanded operations in geographically distributed locations. We also must attract, train, and retain a significant number of qualified sales and marketing personnel, professional services personnel, software engineers, technical personnel, and management personnel. Failure to manage our growth effectively could lead us to over-invest or under-invest in technology and operations; result in weaknesses in our infrastructure, systems, or controls; give rise to operational mistakes, losses, or loss of productivity or business opportunities; reduce client or user satisfaction; limit our ability to respond to competitive pressures; and result in loss of employees and reduced productivity of remaining employees. Our growth could require significant capital expenditures and may divert financial resources and management attention from other projects, such as the development of new or enhanced services or the acquisition of suitable businesses or technologies. If our management is unable to effectively manage our growth, our expenses may increase more than expected, our revenue could decline or may grow more slowly than expected, and we may be unable to implement our business strategy.

We may be unable to adequately protect, and we may incur significant costs in enforcing, our intellectual property and other proprietary rights.

Our success depends in part on our ability to enforce our intellectual property and other proprietary rights. We rely upon a combination of copyright, patent, trademark, trade secret, and unfair competition laws, as well as access and use restrictions and other contractual provisions, to protect these rights.

Our attempts to protect our intellectual property through copyright, patent, and trademark registration may be challenged by others or invalidated through administrative process or litigation. We have fourteen issued U.S. patents, two issued foreign patents, and a number of U.S. and foreign patent applications pending as of December 31, 2015. The scope of our issued patents may be insufficient to prevent competitors from providing products and services similar to ours, our patents may be successfully challenged, and we may not be able to obtain additional meaningful patent protection in the future.

Our agreements with clients and users and with certain vendors and strategic partners limit their use of, and retain our rights in, our intellectual property and proprietary information and grant us ownership of intellectual property created in the

Table of Contents

performance of those agreements to the extent that it relates to the provision of our services. In addition, we require certain of our employees and consultants to enter into confidentiality and assignment of inventions agreements and certain of our vendors and strategic partners to agree to contract provisions regarding confidentiality and non-competition. However, these agreements may be breached, and we may not have adequate remedies for any such breach. Further, no assurance can be given that these agreements will be effective in preventing the unauthorized access to, or use of, our proprietary information or the reverse engineering of our technology. In any event, these agreements do not prevent our competitors from independently developing technology or authoring clinical information that is substantially equivalent or superior to our technology or the information we distribute. Agreement terms that address non-competition are difficult to enforce in many jurisdictions and may not be enforceable in any particular case.

In addition, our platforms incorporate “open source” software components that are licensed to us under various public domain licenses. Open source license terms are often ambiguous, and there is little or no legal precedent governing the interpretation of many of the terms of certain of these licenses. Therefore, the potential impact of such terms on our business is somewhat unknown. For example, some open source licenses require that those using the associated code disclose modifications made to that code and that such modifications be licensed to third parties at no cost. There can be no assurance that efforts we take to monitor the use of open source software to avoid uses in a manner that would require us to disclose or grant licenses under our proprietary source code will be successful, and such use could inadvertently occur.

To the extent that our intellectual property and other proprietary rights are not adequately protected, third parties might gain access to our proprietary information, develop and market products or services similar to ours, or use trademarks similar to ours, each of which could materially harm our business. Existing U.S. federal and state intellectual property laws offer only limited protection. Moreover, the laws of other countries in which we now or may in the future conduct operations or contract for services may afford little or no effective protection of our intellectual property. If we resort to legal proceedings to enforce our intellectual property rights or to determine the validity and scope of the intellectual property or other proprietary rights of others, the proceedings could be burdensome and expensive, even if we were to prevail. Any litigation that may be necessary in the future could result in substantial costs and diversion of resources and could have a material adverse effect on our business, operating results, or financial condition.

We may be sued by third parties for alleged infringement of their proprietary rights.

The software and Internet industries are characterized by the existence of a large number of patents, trademarks, and copyrights and by frequent litigation based on allegations of infringement or other violations of intellectual property rights. Moreover, our business involves the systematic gathering and analysis of data about the requirements and behaviors of payers and other third parties, some or all of which may be claimed to be confidential or proprietary. We have received in the past, and may receive in the future, communications from third parties claiming that we have infringed on the intellectual property rights of others. Our technologies may not be able to withstand such third-party claims of rights against their use, and we could lose the right to use technologies that are the subject of such claims. Any intellectual property claims, with or without merit, could be time-consuming and expensive to resolve, divert management attention from executing our business plan, and require us to pay monetary damages or enter into royalty or licensing agreements. In addition, many of our contracts contain warranties with respect to intellectual property rights, and some require us to indemnify our clients, partners, and third-party service providers for third-party intellectual property infringement claims, which would increase the cost to us of an adverse ruling on such a claim. Indemnification obligations of our partners and third-party service providers may not be effective or adequate to protect us or the indemnifying party may be unable to uphold its contractual obligations.

Moreover, any settlement or adverse judgment resulting from such a claim could require us to pay substantial amounts of money or obtain a license to continue to use the technology or information that is the subject of the claim, or otherwise restrict or prohibit our use of the technology or information. There can be no assurance that we would be able to obtain a license on commercially reasonable terms, if at all, from third parties asserting an infringement claim; that we would be able to develop alternative technology on a timely basis, if at all; that we would be able to obtain a license to use a suitable alternative technology or information to permit us to continue offering, and our clients to

continue using, our affected services; or that we would not need to change our product and design plans, which could require us to redesign affected products or services or delay new offerings. Accordingly, an adverse determination could prevent us from offering our services to others.

Current and future litigation against us could be costly and time-consuming to defend and could result in additional liabilities.

We may from time to time be subject to legal proceedings and claims that arise in the ordinary course of business, such as claims brought by our clients in connection with commercial disputes and employment claims made by our current or former employees. Claims may also be asserted by or on behalf of a variety of other parties, including government agencies, patients of our clients, or stockholders. For example, in May 2013 we purchased the property on which our corporate headquarters are

Table of Contents

located. This property is a former Superfund site, and our ownership of it, or any of our other properties, could expose us to liability under applicable environmental laws, as well as to liability as a landlord or as owner of property that may be used by members of the public. Any litigation involving us may result in substantial costs and may divert management's attention and resources, which may seriously harm our business, overall financial condition, and operating results. Insurance may not cover existing or future claims, be sufficient to fully compensate us for one or more of such claims, or continue to be available on terms acceptable to us. A claim brought against us that is uninsured or underinsured could result in unanticipated costs, thereby reducing our operating results and leading analysts or potential investors to reduce their expectations of our performance resulting in a reduction in the trading price of our stock.

RISKS RELATED TO OUR BUSINESS — OPERATIONS

We depend upon third-party service providers for important functions of our services. If these third-party service providers do not fulfill their contractual obligations or choose to discontinue their services, our business and operations could be disrupted and our operating results would be harmed.

We have entered into service agreements with Dell Marketing L.P., a subsidiary of Dell, Inc., and Access Healthcare Services USA, LLC to provide data entry and other services from facilities located in India and the Philippines to support our client service operations. Among other things, these providers process critical claims data and clinical documents. In addition, we rely on our banking partner, U.S. Bank, for depositing client funds that we collect into our clients' bank accounts. If such services fail or are of poor quality, our business, reputation, and operating results could be harmed. Failure of these service providers to perform satisfactorily could result in client dissatisfaction, disrupt our operations, and adversely affect operating results. With respect to these service providers, we have significantly less control over the systems and processes involved than if we maintained and operated them ourselves, which increases our risk. In some cases, functions necessary to our business are performed on proprietary systems and software to which we have no access. If we need to find an alternative source for performing these functions, we may have to expend significant money, resources, and time to develop the alternative, and if this development is not accomplished in a timely manner and without significant disruption to our business, we may be unable to fulfill our responsibilities to clients or the expectations of clients, with the attendant potential for liability claims and a loss of business reputation, loss of ability to attract or maintain clients, and reduction of our revenue or operating margin.

Our business could be adversely affected if our clients are not satisfied with our services.

We depend on client satisfaction to succeed, both with respect to our cloud-based software and client support services. Our sales organization is dependent on the quality of our service offerings, our business reputation, and strong recommendations from existing clients. If our cloud-based software does not function reliably or fails to achieve client expectations in terms of performance, clients could assert claims against us or terminate their contracts with us. This could damage our reputation and impair our ability to attract or retain clients. We provide client support services to resolve any issues related to our service offerings. Our client support team may be unable to respond quickly enough to accommodate short-term increases in client demand for support, particularly as we increase the size of our client base. It is difficult to predict client demand for support services and if client demand increases significantly, we may be unable to provide satisfactory support services to our clients. Any failure to maintain high-quality and highly-responsive client support, or a market perception that we do not maintain high-quality and highly-responsive support, could harm our reputation, adversely affect our ability to sell our service offerings to existing and prospective clients, and harm our business, operating results, and financial condition.

Various risks could affect our worldwide operations, exposing us to significant costs.

We conduct operations in the United States, India, and the Philippines, either directly or through our service providers. Such worldwide operations expose us to potential operational disruptions and costs as a result of a wide variety of events, including local inflation or economic downturn, currency exchange fluctuations, political turmoil, terrorism, labor issues, natural disasters, unfavorable intellectual property protection, and pandemics. Any such disruptions or costs could have a negative effect on our ability to provide our services or meet our contractual obligations, the cost of our services, client and user satisfaction, our ability to attract or maintain clients and users, and, ultimately, our profits. In the foreign countries where we operate, local laws and customs may differ from those in the U.S. For example, it may be a local custom in certain countries for businesses to engage in practices that are prohibited by our internal

policies and procedures or U.S. laws and regulations applicable to us, such as the Foreign Corrupt Practices Act (“FCPA”). The FCPA generally prohibits U.S. companies from giving or offering money, gifts, or anything of value to a foreign official to obtain or retain business, and requires businesses to make and keep accurate books and records and a system of internal accounting controls. We cannot guarantee that our employees, contractors, and agents will comply with all of our FCPA compliance policies and procedures. If we or our employees, contractors, or agents fail to comply with the requirements of the FCPA or similar legislation, government authorities in the U.S. and elsewhere could seek to impose civil or criminal fines and penalties which could have a material adverse effect on our business, operating results, and financial condition.

Table of Contents

Because competition for our target employees is intense, we may not be able to attract and retain the highly skilled employees we need to support our planned growth.

To continue to execute on our growth plan, we must attract and retain highly qualified personnel. Competition for these personnel is intense, especially for senior sales executives and software engineers with high levels of experience in designing and developing software and Internet-related services. We may not be successful in attracting and retaining qualified personnel. We have from time to time in the past experienced, and we expect to continue to experience in the future, difficulty in hiring and retaining highly skilled employees with appropriate qualifications. In addition, our search for replacements for departed employees may cause uncertainty regarding the future of our business, impact employee hiring and retention, and adversely impact our revenue, operating results, and financial condition.

Many of the companies with which we compete for experienced personnel have greater resources than we have. In addition, in making employment decisions, particularly in the Internet and high-technology industries, job candidates often consider the value of the equity awards they are to receive in connection with their employment. Volatility in the price of our stock or failure to obtain stockholder approval for increases in the number of shares available for grant under our equity plans may, therefore, adversely affect our ability to attract or retain key employees. If we fail to attract new personnel or fail to retain and motivate our current personnel, our business and future growth prospects could be severely harmed.

If we acquire or invest in companies or technologies, they could prove difficult to integrate, disrupt our business, dilute stockholder value, and adversely affect our operating results and the value of our common stock.

As part of our business strategy, we may acquire, enter into joint ventures with, or make investments in complementary companies, services, and technologies in the future. Acquisitions and investments involve numerous risks, including:

- difficulties in identifying and acquiring products, technologies, or businesses that will help our business;
- challenges in integrating operations, technologies, services, and personnel;
- the loss of key personnel;
- failure to achieve anticipated operational efficiencies;
- inconsistencies in standards, controls, procedures, or policies that give rise to additional costs;
- diversion of financial and managerial resources from existing operations and other potential acquisitions and investments;
- the risk of entering new markets in which we have little to no experience;
- risks related to the assumption of known and unknown liabilities;
- the risk of write-offs and the accelerated amortization of expenses related to purchased intangible assets; and
- delays in client purchases due to uncertainty and the inability to maintain relationships with clients of the acquired businesses.

As a result, if we fail to properly evaluate acquisitions or investments, we may not achieve the anticipated benefits of any such acquisitions or investments, we may incur costs in excess of what we anticipate, and management resources and attention may be diverted from other necessary or valuable activities. For example, in 2015, we acquired Razor Insights, LLC (“RazorInsights”), a provider of cloud-based billing and EHR software services to rural and community hospitals, and purchased a suite of internally-developed clinical applications and an EHR system from Beth Israel Deaconess Medical Center, to accelerate our entry into the inpatient market. We may not successfully use the webOMR technology to accelerate the development of our service offerings and integrate RazorInsights’ service offerings and realize the expected benefits of these acquisitions. Our acquisitions could also result in dilutive issuances of our equity securities, the incurrence of debt, contingent liabilities, additional amortization expenses, or impairment of goodwill and purchased long-lived assets, any of which could harm our financial condition, operating results, or value of our common stock.

RISKS RELATED TO OUR BUSINESS — FINANCIALS

Our operating results have in the past fluctuated and may continue to fluctuate significantly, and if we fail to meet the expectations of analysts or investors, our stock price and the value of an investment in our common stock could

decline substantially.

Our operating results are likely to fluctuate, and if we fail to meet or exceed the expectations of securities analysts or investors, the trading price of our common stock could decline. Moreover, our stock price may be based on expectations of our future performance that may be unrealistic or that may not be met. Some of the important factors that could cause our revenues and operating results to fluctuate from quarter to quarter include:

the extent to which our services achieve or maintain market acceptance;

Table of Contents

- our ability to introduce new services and enhancements to our existing services on a timely basis;
- new competitors and the introduction of enhanced products and services from new or existing competitors;
- the length of our contracting and implementation cycles and our fulfillment periods for our services to pharmaceutical companies;
- changes in client days in accounts receivable;
- the severity, length, and timing of seasonal and pandemic illnesses;
- seasonal declines in the use of physician services, generally in the late summer and during the holiday season, which lead to a decline in collections by our physician clients about 30 to 50 days later;
- the financial condition of our current and future clients;
- changes in client budgets and procurement policies;
- changes in pharmaceutical company demand as a result of delays or changes in product approvals and changes in regulations or marketing strategies;
- the amount and timing of our investment in research and development activities;
- the amount and timing of our investment in sales and marketing activities;
 - technical difficulties or interruptions in our services;
- our ability to hire and retain qualified personnel and maintain an adequate rate of expansion of our sales force;
- changes in the regulatory environment related to health care;
- regulatory compliance costs;
- the timing, size, and integration success of potential future acquisitions; and
- unforeseen legal expenses, including litigation and settlement costs.

Many of these factors are not within our control, and the occurrence of one or more of them might cause our operating results to vary widely. As such, we believe that quarter-to-quarter comparisons of our revenues and operating results may not be meaningful and should not be relied upon as an indication of future performance.

A significant portion of our operating expense is relatively fixed in nature in the short term, and planned expenditures are based in part on expectations regarding future revenue and profitability. Accordingly, unexpected revenue shortfalls, lower-than-expected revenue increases as a result of planned expenditures, and longer-than-expected impact on profitability and margins as a result of planned expenditures may decrease our gross margins and profitability and could cause significant changes in our operating results from quarter to quarter. In addition, our future quarterly operating results may fluctuate and may not meet the expectations of securities analysts or investors. If this occurs, the trading price of our common stock could fall substantially, either suddenly or over time.

If the revenue of our clients decreases, or if our clients cancel or elect not to renew their contracts, our revenue will decrease.

Under most of our client contracts, we base our charges on a percentage of the revenue that the client realizes while using our services. Many factors may lead to decreases in client revenue, including:

- interruption of client access to our system for any reason;
- our failure to provide services in a timely or high-quality manner;
- failure of our clients to adopt or maintain effective business practices;
- actions by third-party payers of medical claims to reduce reimbursement;
- government regulations and government or other payer actions or inaction reducing or delaying reimbursement; and
- reduction of client revenue resulting from increased competition or other changes in the marketplace for physician services.

The current economic situation may give rise to several of these factors. For example, patients who have lost health insurance coverage due to unemployment or who face increased deductibles imposed by financially struggling employers or insurers could reduce the number of visits those patients make to our clients. Patients without health insurance or with reduced coverage may also default on their payment obligations at a higher rate than patients with coverage. Added financial stress on our clients could lead to their acquisition or bankruptcy, which could cause the termination of some of our service relationships. Further, despite the cost benefits that we believe our services provide, prospective clients may wish to delay contract decisions due to implementation costs or be reluctant to make

any material changes in their established business methods in the current economic climate. With a reduction in tax revenue, state and federal government health care programs, including

20

Table of Contents

reimbursement programs such as Medicaid or initiatives under the ACA, may be reduced or eliminated, which could negatively impact the payments that our clients receive.

Also, although we currently estimate our expected customer life for clients of athenahealth-branded services to be twelve years, this is only an estimate, and there can be no assurance that our clients will elect to renew their contracts for this period of time. Our clients typically purchase one-year contracts that, in most cases, may be terminated on 90 days' notice without cause. The majority of our clinical information subscriptions have terms of one year, and our contracts with our market research, payer, and pharmaceutical clients for our interactive services typically range from one to three years. We cannot assure you that members of our Epocrates network and other Epocrates-branded services clients will continue to participate in our existing programs beyond the terms of their existing contracts or that they will enter into any additional contracts for new programs that we offer. If our clients' revenue decreases for any of the above or other reasons, or if our clients cancel or elect not to renew their contracts, our revenue will decrease.

If we are required to collect sales and use taxes on the services we sell in additional jurisdictions, we may be subject to liability for past sales and incur additional related costs and expenses, and our future sales may decrease.

We may lose sales or incur significant expenses should states be successful in imposing state sales and use taxes on our services. A successful assertion by one or more states that we should collect sales or other taxes on the sale of our services could result in substantial tax liabilities for past sales, decrease our ability to compete on pricing with other vendors, and otherwise harm our business. Each state has different rules and regulations governing sales and use taxes, and these rules and regulations are subject to varying interpretations that may change over time. We review these rules and regulations periodically and, when we believe that our services are subject to sales and use taxes in a particular state, we voluntarily approach state tax authorities in order to determine how to comply with their rules and regulations. We cannot assure you that we will not be subject to sales and use taxes or related penalties for past sales in states where we believe no compliance is necessary.

Vendors of services, like us, are typically held responsible by taxing authorities for the collection and payment of any applicable sales and similar taxes. If one or more taxing authorities determines that taxes should have, but have not, been paid with respect to our services, we may be liable for past taxes in addition to taxes going forward. Liability for past taxes may also include very substantial interest and penalty charges. Our client contracts provide that our clients must pay all applicable sales and similar taxes. Nevertheless, clients may be reluctant to pay back taxes and may refuse responsibility for interest or penalties associated with those taxes. If we are required to collect and pay back taxes and the associated interest and penalties, and if our clients fail or refuse to reimburse us for all or a portion of these amounts, we will have incurred unplanned expenses that may be substantial. Moreover, imposition of such taxes on our services going forward will effectively increase the cost of such services to our clients and may adversely affect our ability to retain existing clients or to gain new clients in the states in which such taxes are imposed.

We may also become subject to tax audits or similar procedures in states where we already pay sales and use taxes. The incurrence of additional accounting and legal costs and related expenses in connection with, and the assessment of, taxes, interest, and penalties as a result of audits, litigation, or otherwise could be materially adverse to our current and future results of operations and financial condition.

As a result of our variable sales and implementation cycles for our athenahealth services, and the uncertainty as to the timing of the fulfillment of our Epocrates services, we may be unable to recognize revenue to offset expenditures, which could result in fluctuations in our quarterly results of operations or otherwise harm our future operating results. The sales cycle for our athenahealth services can be variable, typically ranging from three to five months from initial contact to contract execution, although this period can be substantially longer. During the sales cycle, we expend time and resources, and we do not recognize any revenue to offset such expenditures. Our implementation cycle is also variable, typically ranging from three to five months from contract execution to completion of implementation, although some of our new-client set-up projects—especially those for larger clients—are complex and require a lengthy delay and significant implementation work. Each client's situation is different, and unanticipated difficulties and delays may arise as a result of failure by us or by the client to meet our respective implementation responsibilities. During the implementation cycle, we expend substantial time, effort, and financial resources implementing our services, but accounting principles do not allow us to recognize the resulting revenue until the service has been implemented, at

which time we begin recognition of implementation revenue over an expected attribution period of the longer of the estimated customer life, currently 12 years, or the contract term.

Even if implementation has begun, there can be no assurance that we will recognize revenue on a timely basis or at all from our efforts. Implementation for a given client may be canceled, as our contracts typically provide that they can be terminated for any reason or no reason on 90 days' notice. In addition, implementation may be delayed, or the target dates for completion may be extended into the future, for a variety of reasons, including the needs and requirements of the client, delays with payer processing, and the volume and complexity of the implementations awaiting our work. If implementation periods

Table of Contents

are extended, our provision of our athenahealth services upon which we realize most of our revenues will be delayed, and our financial condition may be adversely affected. In addition, cancellation of any implementation after it has begun may involve loss to us of time, effort, and expenses invested in the canceled implementation process and lost opportunity for implementing paying clients in that same period of time.

In regard to our Epocrates-branded services, the time between the date of the signing of the contract with a pharmaceutical client for a program, the actual fulfillment of the services under such contract and the revenue recognition associated with such revenues may be lengthy, especially for larger contracts with multiple deliverables, and may be subject to delays over which we have little or no control, including those that result from that client's need for internal approvals.

These factors may contribute to substantial fluctuations in our quarterly operating results, particularly in the near term and during any period in which our sales volume is relatively low. As a result, in future quarters our operating results could fall below the expectations of securities analysts or investors, in which event our stock price would likely decrease.

Because we recognize revenue from our drug and clinical reference tool subscriptions and certain of our interactive services over the term or at the end of the service period, a significant downturn in our business may not be reflected immediately in our operating results, which may make it more difficult to evaluate our prospects.

We recognize revenue from our Epocrates subscription agreements monthly over the terms of these agreements, which are typically one year. In most cases, we recognize revenue from our interactive services over the terms of these agreements or upon delivery of each service element. As a result, a significant portion of the revenue we report in each quarter is generated from subscription and service agreements entered into during prior periods. Consequently, a decline in new or renewed subscriptions or service agreements in any one quarter may not materially affect our financial performance in that quarter but will negatively affect our revenue in future quarters. In addition, we may be unable to adjust our costs, many of which are fixed, in response to reduced revenue. Accordingly, the effect of significant declines in sales and market acceptance of our services may not be reflected in our short-term results of operations, which would make our reported results less indicative of our future prospects.

RISKS RELATED TO OUR SERVICE OFFERINGS

Our proprietary software or our services may not operate properly, which could damage our reputation, give rise to claims against us, or divert application of our resources from other purposes, any of which could harm our business and operating results.

Proprietary software development is time-consuming, expensive, and complex. Unforeseen difficulties can arise. We may encounter technical obstacles, and it is possible that we discover additional problems that prevent our applications from operating properly. If our systems do not function reliably or fail to achieve user or client expectations in terms of performance, clients could assert liability claims against us or attempt to cancel their contracts with us, and members could choose to terminate their use of our services. This could damage our reputation and impair our ability to attract or maintain clients and members.

Information services as complex as those we offer have in the past contained, and may in the future develop or contain, undetected defects or errors. We cannot assure you that material performance problems or defects in our services will not arise in the future. Errors may result from sources beyond our control, including the receipt, entry, or interpretation of patient information; interface of our services with legacy systems that we did not develop; or errors in data provided by third parties. It is challenging for us to test our software for all potential problems because it is difficult to simulate the wide variety of computing environments or treatment methodologies that our clients or members may deploy or rely upon. Therefore, despite testing, defects or errors may arise in our existing or new software or service processes following introduction to the market. For example, changes in payer requirements and practices are frequent and sometimes difficult to determine except through trial and error, so we are continuously discovering defects and errors in our software and service processes compared against these requirements and practices.

Because clients rely on our services to collect, manage, and report clinical, business, and administrative data-including information to assist providers in tracking and treating ill patients-and members rely on our services to provide timely and accurate information regarding medical conditions and medicines, they may have a greater sensitivity to service

errors and security vulnerabilities than clients of software products in general. Any operational delay in or failure of our technology or service processes may result in the disruption of patient care and could cause harm to patients and thereby give rise to a product liability claim or errors or omissions claim. Such claims could subject us to significant legal defense costs and adverse publicity, regardless of the merits or eventual outcome of those claims. Limitations of liability and disclaimers that purport to limit our liability for damages related to defects in our software or content which we may include in our subscription and services agreements may not be enforced by a court or other tribunal or otherwise effectively protect us from related claims. We

Table of Contents

maintain liability insurance coverage, including coverage for errors and omissions. However, it is possible that claims could exceed the amount of our applicable insurance coverage, if any, or that this coverage may not continue to be available on acceptable terms or in sufficient amounts.

In light of this, defects and errors and any failure by us to identify and address them could result in loss of revenue or market share; liability to clients, members, their patients, or others; failure to achieve market acceptance or expansion; diversion of development and management resources; delays in the introduction of new services; injury to our reputation; and increased service and maintenance costs. Defects or errors in our software and service processes might discourage existing or potential clients or members from purchasing services from us. Correction of defects or errors could prove to be impossible or impracticable. The costs incurred in correcting any defects or errors or in responding to resulting claims or liability may be substantial and could adversely affect our operating results.

If our security measures are breached or fail or unauthorized access is obtained to a client's or member's data, our services may be perceived as not being secure, clients and members may curtail or stop using our services, and we may incur significant liabilities.

Our services involve the web-based storage and transmission of clients' and members' proprietary information, including personal or identifying information and protected health information of patients. Because of the sensitivity of this information, security features of our software are very important. From time to time we may detect vulnerabilities in our systems, which, even if they do not result in a security breach, may reduce customer confidence and require substantial resources to address. If our security measures are breached or fail as a result of third-party action, employee error, malfeasance, insufficiency, defective design, or otherwise, someone may be able to obtain unauthorized access to client, member, or patient data. As a result, our reputation could be damaged, our business may suffer, and we could face damages for contract breach, penalties for violation of applicable laws or regulations, and significant costs for remediation and efforts to prevent future occurrences. We rely upon users of our systems for key activities to promote security of those systems and the data within them, such as administration of client-side access credentialing and control of client-side display of data. On occasion, our users have failed to perform these activities. Failure of users to perform these activities may result in claims against us that this reliance was misplaced, which could expose us to significant expense and harm to our reputation. Because techniques used to obtain unauthorized access or to sabotage systems change frequently and generally are not recognized until launched against a target, we may be unable to anticipate these techniques or to implement adequate preventive measures. If an actual or perceived breach of our security occurs, the market perception of the effectiveness of our security measures could be harmed and we could lose sales, clients, and members.

In addition, we use third-party technology and service providers, and our clients may authorize or enable third parties to access their data or the data of their patients. For example, we depend on third-party service providers for processing claims data and clinical documents for our clients and we partner with other health care information technology companies to offer our clients more seamless integration with those companies through electronic interfaces. Vendor management programs and processes for assessment of our partners' information security which we have designed cannot provide absolute security. Our clients may have their own computer systems (whether internally developed or provided by a third party) to manage, store, and transmit clinical and financial data, which may interact with or contain information obtained from our services. Because we do not control our vendors', partners', or clients' information security systems, we cannot ensure the complete integrity or security of these systems. A security breach of our vendors', partners', or clients' system may damage our reputation, adversely affect our ability to attract new clients, cause existing clients to cancel their contracts, subject us to third-party lawsuits, all of which could adversely affect our operating results.

Failure by our clients to obtain proper permissions and waivers may result in claims against us or may limit or prevent our use of data, which could harm our business.

We require our clients to provide necessary notices and to obtain necessary permissions and waivers for use and disclosure of the information that we receive, and we require contractual assurances from them that they have done so and will do so. If they do not obtain necessary permissions and waivers, then our use and disclosure of information that we receive from them or on their behalf may be limited or prohibited by state or federal privacy laws or other laws. This could impair our functions, processes, and databases that reflect, contain, or are based upon such data and

may prevent use of such data. In addition, this could interfere with or prevent creation or use of rules, and analyses or limit other data-driven activities that benefit us. Moreover, we may be subject to claims or liability for use or disclosure of information by reason of lack of valid notice, permission, or waiver. These claims or liabilities could subject us to unexpected costs and adversely affect our operating results.

Various events could interrupt users' access to our systems, exposing us to significant costs.

The ability to access our systems is critical to our clients' administration of care, cash flow, and business viability. Our operations and facilities are vulnerable to interruption or damage from a number of sources, many of which are beyond our

Table of Contents

control, including, without limitation: (i) power loss and telecommunications failures; (ii) earthquake, fire, flood, hurricane, and other natural disasters; (iii) terrorism and acts of war; (iv) software and hardware errors, failures, or crashes in our systems or those of others; and (v) computer viruses, hacking, and similar disruptive problems in our systems or those of others. We attempt to mitigate these risks through various means, including redundant infrastructure, disaster recovery plans, business continuity plans, separate test systems, and change control and system security measures, but our precautions will not protect against all potential problems. If users' access is interrupted because of problems in the operation of our facilities, we could be exposed to significant claims by clients or their patients, particularly if the access interruption is associated with problems in the timely delivery of funds due to those clients or medical information relevant to patient care. Our plans for disaster recovery and business continuity rely in part upon third-party providers of related services, and if those vendors fail us at a time that our systems are not operating correctly, we could incur a loss of revenue and liability for failure to fulfill our obligations. Our business interruption insurance only covers some, but not all, of these potential events, and even for those events that are covered, it may not be sufficient to compensate us fully for losses or damages that may occur as a result of such events, including, for example, loss of market share and diminution of our brand, reputation, and member and client loyalty.

In addition, retention and availability of patient care and physician reimbursement data are subject to federal and state laws governing record retention, accuracy, and access. Some laws impose obligations on our clients and on us to produce information to third parties and to amend or expunge data at their direction. Our failure to meet these obligations may result in liability that could increase our costs and reduce our operating results.

We rely on Internet infrastructure, bandwidth providers, data center providers, other third parties, and our own systems for providing services to our users, and any failure or interruption in the services provided by these third parties or our own systems could expose us to litigation and negatively impact our relationships with users or clients, adversely affecting our brand and our business.

In addition to the services we provide from our offices, we serve our clients primarily from third-party data-hosting facilities. These facilities are vulnerable to damage or interruption from earthquakes, floods, fires, power loss, telecommunications failures, and similar events. They are also subject to break-ins, sabotage, intentional acts of vandalism, and similar misconduct. Despite precautions taken at these facilities, the occurrence of a natural disaster or an act of terrorism, a decision to close the facilities without adequate notice, or other unanticipated problems at two or more of the facilities could result in lengthy interruptions in our service. Even with our disaster recovery arrangements, our services could be interrupted.

Our ability to deliver our Internet- and telecommunications-based services is dependent on the development and maintenance of the infrastructure of the Internet and other telecommunications services by third parties. This includes maintenance of a reliable network backbone with the necessary speed, data capacity, and security for providing reliable Internet access and services and reliable mobile device, telephone, facsimile, and pager systems. We have experienced and expect that we will experience interruptions and delays in services and availability from time to time. We rely on internal systems as well as third-party vendors, including data center, bandwidth, and telecommunications equipment or service providers, to provide our services. We do not maintain redundant systems or facilities for some of these services. In the event of a catastrophic event with respect to one or more of these systems or facilities, we may experience an extended period of system unavailability, which could negatively impact our relationship with users or clients. To operate without interruption, both we and our service providers must guard against:

- damage from fire, power loss, and other natural disasters;
- telecommunications failures;
- software and hardware errors, failures, and crashes;
- security breaches, computer viruses, and similar disruptive problems; and
- other potential interruptions.

Any disruption in the network access, telecommunications, or co-location services provided by these third-party providers or any failure of or by these third-party providers or our own systems to handle current or higher volume of use could significantly harm our business. We exercise limited control over these third-party vendors, which increases our vulnerability to problems with services they provide.

Any errors, failures, interruptions, or delays experienced in connection with these third-party technologies and information services or our own systems could negatively impact our relationships with users and clients, adversely affect our brands and business, and expose us to third-party liabilities. The insurance coverage under our policies may not be adequate to compensate us for all losses that may occur. In addition, we cannot provide assurance that we will continue to be able to obtain adequate insurance coverage at an acceptable cost.

Table of Contents

The reliability and performance of the Internet may be harmed by increased usage or by denial-of-service attacks. The Internet has experienced a variety of outages and other delays as a result of damages to portions of its infrastructure, and it could face outages and delays in the future. These outages and delays could reduce the level of Internet usage as well as the availability of the Internet to us for delivery of our Internet-based services.

We are subject to the effect of payer and provider conduct that we cannot control and that could damage our reputation with clients and result in liability claims that increase our expenses.

We offer certain electronic claims submission services for which we rely on content from clients, payers, and others. Features and safeguards we have implemented to maximize the accuracy and completeness of claims content may not be sufficient to prevent inaccurate claims data from being submitted to payers. Should inaccurate claims data be submitted to payers, we may experience poor operational results and may be subject to liability claims, which could damage our reputation with clients and result in liability claims that increase our expenses.

If our services fail to provide accurate and timely information, or if our content or any other element of any of our services is associated with faulty clinical decisions or treatment, we could have liability to clients, members, clinicians, or patients, which could adversely affect our results of operations.

Our software, content, and services are used to assist clinical decision-making and provide information about patient medical histories, treatment plans, medical conditions, and the use of particular medications. If our software, content, or services fail to provide accurate and timely information or are associated with faulty clinical decisions or treatment, then clients, members, clinicians, or their patients could assert claims against us that could result in substantial costs to us, harm our reputation in the industry, and cause demand for our services to decline.

Our athenaClinicals service is utilized in clinical decision-making, provides access to patient medical histories, and assists in creating patient treatment plans, including the issuance of prescription drugs. Therefore, if these data are incorrect or incomplete or if we make mistakes in the capture or input of these data, adverse consequences, including death, may occur and give rise to product liability and other claims against us by clients, clinicians, patients, or others. We often have little control over data accuracy, a court or government agency may take the position that our storage and display of health information exposes us to personal injury liability or other liability for wrongful delivery or handling of health care services or erroneous health information.

Our Epocrates clinical reference tools and interactive services provide health care professionals with access to clinical information, including information regarding particular medical conditions and the use of particular medications. If our content, or content we obtain from third parties, contains inaccuracies, or we introduce inaccuracies in the process of implementing third-party content, it is possible that patients, physicians, consumers, the providers of the third-party content, or others may sue us if they are harmed as a result of such inaccuracies. We cannot assure you that our editorial and other quality control procedures will be sufficient to ensure that there are no errors or omissions in particular content, and we have had content errors in the past.

The assertion of such claims and ensuing litigation, regardless of its outcome, could result in substantial cost to us, divert management's attention from operations, damage our reputation, and decrease market acceptance of our services. We attempt to limit by contract our liability for damages; have our members assume responsibility for medical oversight and dosing decisions; and require that our clients assume responsibility for medical care and approve key system rules, protocols, and data. Despite these precautions, the allocations of responsibility and limitations of liability set forth in our contracts may not be enforceable, be binding upon patients, or otherwise protect us from liability for damages. Furthermore, general liability and errors and omissions insurance coverage may not continue to be available on acceptable terms or may not be available in sufficient amounts to cover one or more large claims against us. In addition, the insurer might disclaim coverage as to any future claim. One or more large claims could exceed our available insurance coverage.

If any of these risks occur, they could materially adversely affect our business, financial condition, or results of operations.

RISKS RELATED TO REGULATION

Government regulation of health care creates risks and challenges with respect to our compliance efforts and our business strategies.

The health care industry is highly regulated and is subject to changing political, legislative, regulatory, and other influences. Existing and new laws and regulations affecting the health care industry could create unexpected liabilities for us, cause us to incur additional costs, and restrict our operations. Many health care laws are complex, and their application to specific services and relationships may not be clear. In particular, many existing health care laws and regulations, when

25

Table of Contents

enacted, did not anticipate the health care information and interactive services that we provide, and these laws and regulations may be applied to our services in ways that we do not anticipate, particularly as we develop and release new and more sophisticated products and services. Our failure to accurately anticipate the application of these laws and regulations, or our other failure to comply with them, could create liability for us, result in adverse publicity, and negatively affect our business. Some of the risks we face from health care regulation are described below:

False or Fraudulent Claim Laws. There are numerous federal and state laws that prohibit submission of false information, or the failure to disclose information, in connection with submission and payment of physician claims for reimbursement. In some cases, these laws also prohibit abuse in connection with such submission and payment. Any failure of our services to comply with these laws and regulations could result in substantial liability (including, but not limited to, criminal liability), adversely affect demand for our services, and force us to expend significant capital, research and development, and other resources to address the failure. Errors by us or our systems with respect to entry, formatting, preparation, or transmission of claim information may be determined or alleged to be in violation of these laws and regulations. Any determination by a court or regulatory agency that our services violate these laws could subject us to civil or criminal penalties, invalidate all or portions of some of our client contracts, require us to change or terminate some portions of our business, require us to refund portions of our services fees, cause us to be disqualified from serving clients doing business with government payers, and have an adverse effect on our business. In most cases where we are permitted to do so, we calculate charges for our services based on a percentage of the collections that our clients receive as a result of our services. To the extent that violations or liability for violations of these laws and regulations require intent, it may be alleged that this percentage calculation provides us or our employees with incentive to commit or overlook fraud or abuse in connection with submission and payment of reimbursement claims. CMS has stated that it is concerned that percentage-based billing services may encourage billing companies to engage in or overlook fraudulent or abusive practices.

In addition, we may contract with third parties that offer software and services relating to the selection or verification of codes used to identify and classify the services for which reimbursement is sought. Submission of codes that do not accurately reflect the services provided or the location or method of their provision may constitute a violation of false or fraudulent claims laws. Our ability to comply with these laws depends on the coding decisions made by our clients and the accuracy of our vendors' software and services in suggesting possible codes to those clients and verifying that proper codes have been selected.

HIPAA and other Health Privacy Regulations. There are numerous federal and state laws related to patient privacy. In particular, HIPAA includes privacy standards that protect individual privacy by limiting the uses and disclosures of individually identifiable health information and implementing data security standards that require covered entities to implement administrative, physical, and technological safeguards to ensure the confidentiality, integrity, availability, and security of individually identifiable health information in electronic form. HIPAA also specifies formats that must be used in certain electronic transactions, such as claims, payment advice, and eligibility inquiries. Because we translate electronic transactions to and from HIPAA-prescribed electronic formats and other forms, we are considered a clearinghouse and, as such, a covered entity subject to HIPAA. In addition, our clients are also covered entities and are mandated by HIPAA to enter into written agreements with us – known as business associate agreements – that require us to safeguard individually identifiable health information. Business associate agreements typically include:

- a description of our permitted uses of individually identifiable health information;
- a covenant not to disclose that information except as permitted under the agreement and to make our subcontractors, if any, subject to the same restrictions;
- assurances that appropriate administrative, physical, and technical safeguards are in place to prevent misuse of that information;
- an obligation to report to our client any use or disclosure of that information other than as provided for in the agreement;
- a prohibition against our use or disclosure of that information if a similar use or disclosure by our client would violate the HIPAA standards;
- the ability of our clients to terminate the underlying support agreement if we breach a material term of the business associate agreement and are unable to cure the breach;

the requirement to return or destroy all individually identifiable health information at the end of our support agreement; and
access by the HHS to our internal practices, books, and records to validate that we are safeguarding individually identifiable health information.

Table of Contents

We may not be able to adequately address the business risks created by HIPAA implementation. Furthermore, we are unable to predict what changes to HIPAA or other laws or regulations might be made in the future or how those changes could affect our business or the costs of compliance. For example, the provisions of the HITECH Act and the regulations issued under it (including the omnibus rule promulgated in January 2013) have provided clarification of certain aspects of both the Privacy and Security Rules, expansion of the disclosure requirements for a breach of the Security Rule, and strengthening of the civil and criminal penalties for failure to comply with HIPAA. In addition, ONCHIT is coordinating the ongoing development of standards to enable interoperable health information technology infrastructure nationwide based on the widespread adoption of electronic health records in the health care sector. We are unable to predict what, if any, impact the changes in such standards will have on our compliance costs or our services.

In addition, some payers and clearinghouses with which we conduct business interpret HIPAA transaction requirements differently than we do. Where clearinghouses or payers require conformity with their interpretations as a condition of effecting transactions, and their interpretations are no less stringent than ours, we seek to comply with their interpretations.

The HIPAA transaction standards include proper use of procedure and diagnosis codes. Since these codes are selected or approved by our clients, and since we do not verify their propriety, some of our capability to comply with the transaction standards is dependent on the proper conduct of those clients.

Among our services, we provide automated reminder services to patients, Internet- and telephone-based access to medical test results, pager and email notification to practices of patient calls, and patient call answering services. Any failure of our clients to provide accurate contact information for their patients or physicians or any breach of our telecommunications systems could result in a disclosure of individually identifiable health information.

In addition to the HIPAA Privacy and Security Rules and the HITECH Act requirements, most states have enacted patient confidentiality laws that protect against the disclosure of confidential medical and other personally identifiable information, and many states have adopted or are considering further legislation in this area, including privacy safeguards, security standards, and data security breach notification requirements. Such state laws, if more stringent than HIPAA and HITECH Act requirements, are not preempted by the federal requirements, and we are required to comply with them.

Failure by us to comply with any of the federal and state standards regarding patient privacy may subject us to penalties, including civil monetary penalties and, in some circumstances, criminal penalties. In addition, such failure may injure our reputation and adversely affect our ability to retain clients and attract new clients.

In addition to false claims and HIPAA requirements, we are subject to a variety of other regulatory schemes, including:

Anti-Kickback and Anti-Bribery Laws. There are federal and state laws that govern patient referrals, physician financial relationships, and inducements to health care providers and patients. For example, the federal health care programs' anti-kickback law prohibits any person or entity from offering, paying, soliciting, or receiving anything of value, directly or indirectly, for the referral of patients covered by Medicare, Medicaid, and other federal health care programs or the leasing, purchasing, ordering, or arranging for or recommending the lease, purchase, or order of any item, good, facility, or service covered by these programs. Many states also have similar anti-kickback laws that are not necessarily limited to items or services for which payment is made by a federal health care program. Moreover, both federal and state laws prohibit bribery and similar behavior. Any determination by a state or federal regulatory agency that any of our activities or those of our clients, vendors, or channel partners violate any of these laws could subject us to civil or criminal penalties, require us to change or terminate some portions of our business, require us to refund a portion of our service fees, disqualify us from providing services to clients doing business with government programs, and have an adverse effect on our business. Even an unsuccessful challenge by regulatory authorities of our activities could result in adverse publicity and could require a costly response from us.

Legislation relating to payments to physicians. Legislation enacted or pending in several states and enacted at the federal level as part of the ACA and the Healthcare and Education Reconciliation Act of 2010 mandates public disclosure of, or otherwise regulates or limits the providing of, certain gifts and payments by pharmaceutical companies to physicians. These laws may be interpreted to cover honorarium payments made to physicians for

participation in market research activities sponsored by pharmaceutical companies. Because we currently provide market research services involving participants from our member network, the increased adoption and enforcement of these laws and the application of any public disclosure requirements or other limitations may have a negative impact on the ability of pharmaceutical companies to sponsor these activities or the willingness of physicians to participate in the market research. We cannot predict how pharmaceutical companies or physicians will respond when such legislation becomes more widespread or becomes effective at the federal level. A significant decline in the sponsorship of our market research services by pharmaceutical companies or the agencies that represent such companies, or a significant decline in physicians' willingness to participate in such studies could negatively impact our operating results.

Table of Contents

Anti-Referral Laws. There are federal and state laws that prohibit payment for patient referrals, patient brokering, remuneration of patients, or billing based on referrals between individuals or entities that have various financial, ownership, or other business relationships with health care providers. In many cases, billing for care arising from such actions is illegal. These vary widely from state to state, and one of the federal anti-referral laws—the Stark Law—is very complex in its application. Any determination by a state or federal regulatory agency that any of our practice clients violate or have violated any of these laws may result in allegations that claims that we have processed or forwarded are improper. This could subject us to civil or criminal penalties, require us to change or terminate some portions of our business, require us to refund portions of our services fees, and have an adverse effect on our business. Even an unsuccessful challenge by regulatory authorities of our activities could result in adverse publicity and could require a costly response from us.

Corporate Practice of Medicine Laws and Fee-Splitting Laws. Many states have laws forbidding physicians from practicing medicine in partnership with non-physicians, such as business corporations. In some states, including New York, these take the form of laws or regulations forbidding splitting of physician fees with non-physicians or others. In some cases, these laws have been interpreted to prevent business service providers from charging their physician clients on the basis of a percentage of collections or charges. We have varied our charge structure in some states to comply with these laws, which may make our services less desirable to potential clients. Any determination by a state court or regulatory agency that our service contracts with our clients violate these laws could subject us to civil or criminal penalties, invalidate all or portions of some of those contracts, require us to change or terminate some portions of our business, require us to refund portions of our services fees, and have an adverse effect on our business. Even an unsuccessful challenge by regulatory authorities of our activities could result in adverse publicity and could require a costly response from us.

Anti-Assignment Laws. There are federal and state laws that prohibit or limit assignment of claims for reimbursement from government-funded programs. In some cases, these laws have been interpreted in regulations or policy statements to limit the manner in which business service companies may handle checks or other payments for such claims and to limit or prevent such companies from charging their physician clients on the basis of a percentage of collections or charges. Any determination by a state court or regulatory agency that our service contracts with our practice clients violate these laws could subject us to civil or criminal penalties, invalidate all or portions of some of those contracts, require us to change or terminate some portions of our business, require us to refund portions of our service fees, and have an adverse effect on our business. Even an unsuccessful challenge by regulatory authorities of our activities could result in adverse publicity and could require a costly response from us.

Prescribing Laws. The use of our software by physicians to perform a variety of functions relating to prescriptions, including electronic prescribing, electronic routing of prescriptions to pharmacies, and dispensing of medication, is governed by state and federal law, including fraud and abuse laws, drug control regulations, and state department of health regulations. States have differing prescription format requirements, and, due in part to recent industry initiatives, federal law and the laws of all 50 states now provide a regulatory framework for the electronic transmission of prescription orders. Regulatory authorities such as the HHS' Centers for Medicare and Medicaid Services may impose functionality standards with regard to electronic prescribing and EHR technologies. Any determination that we or our practice clients have violated prescribing laws may expose us to liability, loss of reputation, and loss of business. These laws and requirements may also increase the cost and time necessary to market new services and could affect us in other respects not presently foreseeable.

Electronic Health Records Laws. A number of federal and state laws govern the use and content of electronic health record systems, including fraud and abuse laws that may affect how such technology is provided. As a company that provides EHR functionality, our systems and services must be designed in a manner that facilitates our clients' compliance with these laws. Because this is a topic of increasing state and federal regulation, we expect additional and continuing modification of the current legal and regulatory environment. We cannot predict the content or effect of possible future regulation on our business activities. The software component of our athenaClinicals service was certified as a 2014 Edition compliant Complete EHR by an ONC-ATCB in accordance with the applicable certification criteria adopted by the Secretary of the HHS. However, such certification does not represent an endorsement of our athenaClinicals service by HHS or guarantee the receipt of incentive payments. We cannot be

certain that our system will meet future requirements.

Claims Transmission Laws. Our services include the manual and electronic transmission of medical practice claims for reimbursement from payers. Federal and various state laws provide for civil and criminal penalties for any person who submits, or causes to be submitted, a claim to any payer (including, without limitation, Medicare, Medicaid, and any private health plans and managed care plans) that is false or that overbills or bills for items that have not been provided to the patient. To the extent that such laws apply to a service that merely transmits claims on behalf of others, we could be subject to the same civil and criminal penalties as our practice clients.

Table of Contents

Prompt Pay Laws. Laws in many states govern prompt payment obligations for health care services. These laws generally define claims payment processes and set specific time frames for submission, payment, and appeal steps. They frequently also define and require clean claims. Failure to meet these requirements and time frames may result in rejection or delay of claims. Failure of our services to comply may adversely affect our business results and give rise to liability claims by practice clients.

Medical professional regulation. The practice of most health care professions requires licensing under applicable state law. In addition, the laws in some states prohibit business entities from practicing medicine. We employ and contract with physicians who provide only medical information to our users, some of whom may be consumers, and we do not intend to provide medical care or advice. Any determination that we are a health care provider and acted improperly as a health care provider may result in liability to us.

Regulation of drug and medical device advertising and promotion. We provide services involving promotion of prescription and over-the-counter drugs and medical devices. Any increase in regulation of these areas by the FDA; the Federal Trade Commission, or FTC; or other governmental bodies at the federal, state, or local level, could make it more difficult for us to contract for certain of our interactive services. Physician groups and others have criticized the FDA's current policies and have called for restrictions on advertising of prescription drugs and for increased FDA enforcement. In response, the FDA has conducted hearings and sought public comment regarding its regulation of information concerning drugs on the Internet and the relationships between pharmaceutical companies and those disseminating information on drugs. We cannot predict what actions the FDA or industry participants may take in response to these criticisms. It is also possible that new laws would be enacted that impose restrictions on such marketing and advertising. Our interactive services revenues could be materially reduced by additional restrictions on the marketing or advertising of prescription drugs and medical devices, whether imposed by law or regulation or by policies adopted by industry members. If the FDA, the FTC, or another governmental body finds that any information available on our website or distributed by us violates FDA, FTC, or other laws or regulations, they may take regulatory or judicial action against us or the advertiser or sponsor of that information. State attorneys general may also take similar action based on their state's consumer protection statutes or other new or existing laws.

Medical Device Laws. The U.S. Food and Drug Administration ("FDA") has promulgated a draft policy for the regulation of computer software products as medical devices under the 1976 Medical Device Amendments to the Federal Food, Drug and Cosmetic Act. In addition, in February 2011 the FDA issued a final rule regarding regulation of Medical Device Data Systems ("MDDS"), which are systems that are intended to transfer, store, convert, or display medical device data. While EHRs are expressly exempted from the final rule, it is possible that future changes in our services could involve the transfer, storage, conversion, or display of medical device data. In April 2014, a draft report developed by the FDA, ONCHIT, and the Federal Communications Commission, was released proposing a regulatory framework for health information technology for the purpose of promoting innovation, protecting patient safety, and avoiding regulatory duplication. To the extent that our software is considered a medical device under the policy or an MDDS under the final rule, or is the subject of additional regulation promulgated as a result of the report, we, as a provider of application functionality, could be required, depending on the functionality, to:

register and list our products with the FDA;

notify the FDA and demonstrate substantial equivalence to other products on the market before marketing our functionality; or

obtain FDA approval by demonstrating safety and effectiveness before marketing our functionality.

The FDA can impose extensive requirements governing pre- and post-market conditions, such as service investigation and others relating to approval, labeling, and manufacturing. In addition, the FDA can impose extensive requirements governing software development controls and quality assurance processes.

Potential additional regulation of the disclosure of health information outside the United States may adversely affect our operations and may increase our costs.

Federal or state governmental authorities may impose additional data security standards or additional privacy or other restrictions on the collection, use, transmission, and other disclosures of health information. Legislation has been proposed at various times at both the federal and the state level that would limit, forbid, or regulate the use or

transmission of medical information outside of the United States. Such legislation, if adopted, may render our use of our off-shore partners, such as our data-entry and customer service providers, for work related to such data impracticable or substantially more expensive. Alternative processing of such information within the United States may involve substantial delay in implementation and increased cost.

Table of Contents

Due to the particular nature of certain services we provide or the manner in which we provide them, we may be subject to government regulation unrelated to health care.

While our services are primarily subject to government regulations pertaining to health care, certain aspects of those services may require us to comply with regulatory schemes from other areas. Examples of such regulatory schema include:

Anti-spam Laws. We may be required to comply with current or future anti-spam legislation by limiting or modifying some of our interactive services, such as our clinical messaging, which may result in a reduction in our revenue. One such law, the Controlling the Assault of Non-Solicited Pornography and Marketing Act of 2003, or CAN-SPAM, became effective in the United States on January 1, 2004. CAN-SPAM imposes complex and often burdensome requirements in connection with the sending of commercial e-mail. CAN-SPAM or similar laws may impose burdens on our member communication practices and on certain of our services, which in turn could harm our ability to attract new payer and pharmaceutical clients and increase revenues.

Antitrust Laws. Our national cloud-based network allows us access to cost and pricing data for a large number of providers in most regional markets, as well as to the contracted rates for third-party payers. To the extent that our services enable providers to compare their cost and pricing data with those of their competitors, those providers could collude to increase the pricing for their services, to reduce the compensation they pay their employees, or to collectively negotiate agreements with third parties. Similarly, if payers are able to compare their contracted rates of payment to providers, those payers may seek to reduce the amounts they might otherwise pay. Such actions may be deemed to be anti-competitive and a violation of federal antitrust laws. To the extent that we are deemed to have enabled such activities, we could be subject to fines and penalties imposed by the U.S. Department of Justice or the Federal Trade Commission and be required to curtail or terminate the services that permitted such collusion.

Debt Collection Laws. As a billing service that offers patient communication and registration services, our employees or those of our service providers may from time to time come into contact with patients who owe our clients outstanding amounts. Communications with patients that relate to amounts owed may be deemed to subject us or our service providers to federal or state debt collection laws and regulations. Such laws and regulations, if deemed to apply to us, could require registration with government agencies and compliance with significant administrative obligations (e.g., to maintain an in-state office with local employees), which could result in increased expenses and subject us to fines and penalties for violation. Following the disclosure in 2012 of the methods used by debt collector Accretive Health to obtain payment of amounts owed by patients to one of its hospital clients, heightened focus on debt collection practices may lead to additional regulation and greater scrutiny of existing debt collection practices.

Privacy Regulation. The FTC and many state attorneys general are applying federal and state consumer protection laws to require that the online collection, use, and dissemination of data, and the presentation of website or other electronic content, comply with certain standards for notice, choice, security, and access. Courts may also adopt these developing standards. A number of states, including California, have enacted laws or are considering the enactment of laws governing the release of credit card or other personal information received from consumers.

In addition, several foreign governments have regulations dealing with the collection and use of personal information obtained from their citizens. For example, the European Union, or EU, adopted the Data Protection Directive, or DPD, imposing strict regulations and establishing a series of requirements regarding the collection and use of personally identifiable information online. The DPD provides for specific regulations requiring all non-EU countries doing business with EU member states to provide adequate data privacy protection when receiving personal data from any of the EU member states. Similarly, Canada's Personal Information and Protection of Electronic Documents Act provides Canadian residents with privacy protections in regard to transactions with businesses and organizations in the private sector and sets out ground rules for how private sector organizations may collect, use, and disclose personal information in the course of commercial activities. Foreign governments may attempt to apply such laws extraterritorially or through treaties or other arrangements with U.S. governmental entities, and our practice management services for practices along the Canadian border and our market research services could each involve the personal information of foreign residents. Furthermore, in the conduct of our market research activities outside of the United States, we rely upon a third party to identify and recruit respondents for the market research and to comply with the applicable privacy laws in each jurisdiction in which it operates. We cannot assure you that this third party

will successfully comply with such laws or that we would not be responsible for any failure of this third party to comply.

We cannot assure you that the privacy policies and other statements regarding our practices will be found sufficient to protect us from liability or adverse publicity relating to the privacy and security of personal information. Whether and how existing local and international privacy and consumer protection laws in various jurisdictions apply to the Internet and other online technologies is still uncertain and may take years to resolve. Privacy laws and regulations, if drafted or interpreted broadly, could be deemed to apply to the technology we use and could restrict our information collection methods or decrease

Table of Contents

the amount and utility of the information that we would be permitted to collect. The costs of compliance with, and the other burdens imposed by, these and other laws or regulatory actions may prevent us from selling our products or services, or increase the costs of doing so, and may affect our ability to invest in or jointly develop products. In addition, a determination by a court or government agency that any of our practices, or those of our agents, do not meet these standards could result in liability, result in adverse publicity, and adversely affect our business.

Errors or illegal activity on the part of our clients may result in claims against us.

We require our clients to provide us with accurate and appropriate data and directives for our actions. We also rely upon our clients as users of our system to perform key activities in order to produce proper claims for reimbursement. Failure of our clients to provide these data and directives or to perform these activities may result in claims against us alleging that our reliance was misplaced or unreasonable or that we have facilitated or otherwise participated in submission of false claims.

If participants in our channel marketing and sales lead programs do not maintain appropriate relationships with current and potential clients, our sales accomplished with their help or data may be unwound and our payments to them may be deemed improper.

We maintain a series of relationships with third parties that we term “channel relationships.” These relationships take different forms under different contractual language. Some relationships help us identify sales leads. Other relationships permit third parties to act as value-added resellers or as independent sales representatives for our services. In some cases, for example in the case of some membership organizations, these relationships involve endorsement of our services as well as other marketing activities. In each of these cases, we require contractually that the third party disclose information to and limit their relationships with potential purchasers of our services for regulatory compliance reasons. If these third parties do not comply with these regulatory requirements or if our requirements are deemed insufficient, sales accomplished with the data or help that they have provided, as well as the channel relationships themselves, may not be enforceable, may be unwound, and may be deemed to violate relevant laws or regulations. Third parties that, despite our requirements, exercise undue influence over decisions by current and prospective clients, occupy positions with obligations of fidelity or fiduciary obligations to current and prospective clients, or who offer bribes or kickbacks to current and prospective clients or their employees may be committing illegal acts that could render any resulting contract between us and the client unenforceable or in violation of relevant laws or regulations. Any misconduct by these third parties with respect to current or prospective clients, any failure to follow contractual requirements, or any insufficiency of those contractual requirements may result in allegations that we have encouraged or participated in illegal behavior and that payments to such third parties under our channel contracts are improper. This misconduct could subject us to civil or criminal claims and liabilities, require us to change or terminate some portions of our business, require us to refund portions of our services fees, and adversely affect our revenue and operating margin. Even an unsuccessful challenge of our activities could result in adverse publicity, require costly response from us, impair our ability to attract and maintain clients, and lead analysts or investors to reduce their expectations of our performance, resulting in reduction in the market price of our stock. Our services present the potential for embezzlement, identity theft, or other similar illegal behavior by our employees or subcontractors with respect to third parties.

Among other things, our services involve handling mail from payers and from patients for many of our clients, and this mail frequently includes original checks and credit card information and occasionally includes currency. Even in those cases in which we do not handle original documents or mail, our services also involve the use and disclosure of personal and business information that could be used to impersonate third parties or otherwise gain access to their data or funds. If any of our employees or subcontractors takes, converts, or misuses such funds, documents, or data, we could be liable for damages, and our business reputation could be damaged or destroyed. In addition, we could be perceived to have facilitated or participated in illegal misappropriation of funds, documents, or data and therefore be subject to civil or criminal liability.

Subsidy of services similar to ours may reduce client demand if we do not participate in such programs.

In the past few years, various entities and federal programs have provided subsidies for services similar to ours, including EHR initiatives. We cannot guarantee that we will be able to continue to qualify for and participate in such subsidy programs in the future. To the extent that we do not participate in such programs, demand for our services

may be reduced, which may decrease our revenues.

Table of Contents

RISKS RELATED TO OWNERSHIP OF OUR COMMON STOCK

The price of our common stock may continue to be volatile.

The trading price of our common stock has been and is likely to remain highly volatile and could be subject to wide fluctuations in response to various factors, some of which are beyond our control or unrelated to our operating performance. In addition to the factors discussed in this “Risk Factors” section and elsewhere in this Annual Report on Form 10-K, these factors include:

- the operating performance of similar companies;
- the overall performance of the equity markets;
- announcements by us or our competitors of acquisitions, business plans, or commercial relationships;
- threatened or actual litigation;
- changes in laws or regulations relating to the provision of health care or the sale of health insurance;
- any major change in our board of directors or management;
- publication of research reports or news stories about us, our competitors, or our industry or positive or negative recommendations or withdrawal of research coverage by securities analysts;
- large volumes of sales of our shares of common stock by existing stockholders; and
- general political and economic conditions.

In addition, the stock market in general, and the market for Internet-related companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. Securities class action litigation has often been instituted against companies following periods of volatility in the overall market and in the market price of a company’s securities. This litigation, if instituted against us, could result in very substantial costs; divert our management’s attention and resources; and harm our business, operating results, and financial condition.

Provisions in our certificate of incorporation and by-laws or Delaware law might discourage, delay, or prevent a change of control of our company or changes in our management and, therefore, depress the trading price of our common stock.

Provisions of our certificate of incorporation and by-laws and Delaware law may discourage, delay, or prevent a merger, acquisition, or other change in control that stockholders may consider favorable, including transactions in which they might otherwise receive a premium for their shares of our common stock. These provisions may also prevent or frustrate attempts by our stockholders to replace or remove our management. These provisions include:

- our classified board of directors and limitations on the removal of directors;
- advance notice requirements for stockholder proposals and nominations;
- the inability of stockholders to act by written consent or to call special meetings; and
- the ability of our board of directors to make, alter, or repeal our by-laws.

The affirmative vote of the holders of at least 75% of our shares of capital stock entitled to vote is necessary to amend or repeal the above provisions of our certificate of incorporation. As our board of directors has the ability to designate the terms of and issue new series of preferred stock without stockholder approval, the effective number of votes required to make such changes could increase. Also, absent approval of our board of directors, our by-laws may only be amended or repealed by the affirmative vote of the holders of at least 75% of our shares of capital stock entitled to vote.

In addition, Section 203 of the Delaware General Corporation Law prohibits a publicly held Delaware corporation from engaging in a business combination with an interested stockholder (generally an entity that, together with its affiliates, owns, or within the last three years has owned, 15% or more of our voting stock) for a period of three years after the date of the transaction in which the entity became an interested stockholder, unless the business combination is approved in a prescribed manner.

The existence of the foregoing provisions and anti-takeover measures could limit the price that investors might be willing to pay in the future for shares of our common stock. They could also deter potential acquirers of our company, thereby reducing the likelihood that stockholders could receive a premium for their common stock in an acquisition. We do not currently intend to pay dividends on our common stock, and, consequently, stockholders’ ability to achieve a return on their investment will depend on appreciation in the price of our common stock.

Table of Contents

We have never declared or paid any cash dividends on our common stock and do not currently intend to do so for the foreseeable future. We currently intend to invest our future earnings, if any, to fund our growth. Therefore, investors are not likely to receive any dividends on their common stock for the foreseeable future, and the success of an investment in shares of our common stock will depend upon any future appreciation in its value. There is no guarantee that shares of our common stock will appreciate in value or even maintain the price at which our stockholders have purchased their shares.

Item 1B. Unresolved Staff Comments.

None.

Item 2. Properties.

Our corporate headquarters is located in Watertown, Massachusetts on the Arsenal on the Charles campus, which we own. The Arsenal on the Charles is a 29-acre, multi-building, commercial property. It includes approximately 762,000 square feet of office space. In May 2013, we purchased the Arsenal on the Charles campus where we were leasing space for our headquarters and related operating activities prior to the transaction. We currently occupy 415,353 square feet of these facilities and lease the remainder to third parties. Additionally, we own a complex of buildings, including approximately 210,400 square feet of office space, on approximately 53 acres of land in Belfast, Maine, as well as a conference and training facility on approximately 396 acres of land in Northport, Maine. We lease the remainder of our facilities in various locations in the United States, including: Atlanta, Georgia; Austin, Texas; Princeton, New Jersey; and San Francisco, California; and in Chennai, India. Additionally, we operate data centers nationwide.

Item 3. Legal Proceedings.

On March 1, 2013, a complaint was filed in the United States District Court for the Northern District of California captioned Police and Fire Retirement System of the City of Detroit v. Epocrates, Inc. et al., Case No. 5:13-cv-945, on behalf of a putative class of Epocrates' stockholders against Epocrates and its former officers and directors. The complaint asserted claims under sections 11, 12 and 15 of the Securities Act of 1933 on behalf of all stockholders that purchased Epocrates stock in its initial public offering ("IPO") and claims under sections 10(b) and 20 of the Securities Exchange Act of 1934 on behalf of all stockholders that purchased shares between February 2, 2011 (the day after the IPO) and August 9, 2011. On October 8, 2013, plaintiffs filed an amended complaint, alleging only claims under the Securities Exchange Act of 1934 and voluntarily dismissing a number of the individual defendants. Plaintiffs allege that Epocrates made false or misleading statements with respect to the fact that Epocrates' pharmaceutical clients were awaiting guidance from the Food and Drug Administration on the use of advertising and social media, which caused the clients to delay marketing and negatively impacted the timing of Epocrates' sales and revenue growth. The complaint seeks certification as a class action, compensatory damages in an unspecified amount, plaintiffs' costs, attorneys' fees, and such other and further relief as the court may deem just and proper. On December 9, 2013, we filed a motion to dismiss the amended complaint. On June 4, 2014, the court issued an order dismissing the complaint and granting plaintiffs leave to amend their complaint. On June 30, 2014, plaintiffs filed a second amended complaint, which asserts substantially similar claims as those set forth in the first amended complaint. On July 14, 2014, we filed a motion to dismiss the second amended complaint. On October 2, 2014, the court granted plaintiffs leave to file a third amended complaint by October 23, 2014, and denied the motion to dismiss as moot. Plaintiffs filed their third amended complaint on October 23, 2014, which asserts substantially similar claims on behalf of all stockholders that purchased shares between February 1, 2011, and August 9, 2011. We filed a motion to dismiss the third amended complaint on November 10, 2014, and the court denied the motion on March 13, 2015. On April 27, 2015, we filed our answer to the third amended complaint denying the allegations in the third amended complaint. On September 22, 2015, the parties reached an agreement in principle on a comprehensive settlement of all claims asserted in the lawsuit with no admission of liability by any defendants and with any settlement amounts being funded by insurance. The court preliminarily approved the settlement on December 16, 2015 and set a final approval hearing for May 2016.

Table of Contents

On May 21, 2015, a class action petition was filed by St. Louis Heart Center, Inc. in the State Circuit Court of St. Louis County, Missouri, against athenahealth. The petition alleges we violated the Telephone Consumer Protection Act (the “TCPA”). The Company was served on July 11, 2015. On August 10, 2015, the case was removed to federal court in the United States District Court for the Eastern District of Missouri, Case No. 4:15-cv-01215. We served a Rule 68 offer of judgment, offering the plaintiff relief for its individual claims on August 11, 2015. On November 2, 2015, the court entered an order staying the case pending the United States Supreme Court’s (the “Supreme Court”) decision in *Campbell-Ewald v. Gomez*, No. 14-857 (“*Campbell-Ewald*”). On January 20, 2016, the Supreme Court issued its decision in *Campbell-Ewald*. We intend to vigorously defend this action.

On September 4, 2015, a class action petition was filed by Michigan Urgent & Primary Care Physicians, P.C., in the United States District Court for the Eastern District of Michigan, Case No. 2:15-cv-13156, against athenahealth. The petition alleges we violated the TCPA. The Company was served on September 9, 2015. We served a Rule 68 offer of judgment, offering the plaintiff relief for its individual claims on October 16, 2015. On December 2, 2015, the court continued the matter for 60 days pending the Supreme Court’s decision in *Campbell-Ewald*. On January 20, 2016, the Supreme Court issued its decision in *Campbell-Ewald*. We intend to vigorously defend this action.

In addition, from time to time we may be subject to other legal proceedings, claims, and litigation arising in the ordinary course of business. We do not, however, currently expect that the ultimate costs to resolve any pending matter will have a material effect on our consolidated financial position, results of operations, or cash flows.

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.

Market Information

Our common stock is listed on the NASDAQ Global Select Market under the trading symbol "ATHN." The following table sets forth, for each of the periods indicated, the high and low sales prices per share of our common stock as reported by the NASDAQ Global Select Market.

	High	Low
Fiscal Year Ended December 31, 2015		
First Quarter	\$ 152.75	\$ 118.10
Second Quarter	\$ 130.80	\$ 111.14
Third Quarter	\$ 146.80	\$ 110.68
Fourth Quarter	\$ 170.42	\$ 127.25
Fiscal Year Ended December 31, 2014		
First Quarter	\$ 206.70	\$ 128.43
Second Quarter	\$ 168.18	\$ 97.30
Third Quarter	\$ 146.34	\$ 117.62
Fourth Quarter	\$ 153.25	\$ 107.88

Holders

The last reported sale price of our common stock on the NASDAQ Global Select Market on February 1, 2016 was \$142.59 per share. As of February 1, 2016, we had 81 holders of record of our common stock. Because many shares of common stock are held by brokers and other institutions on behalf of stockholders, we are unable to estimate the total number of stockholders represented by these record holders.

Dividends

We have never declared or paid any dividends on our capital stock. We currently intend to retain any future earnings and do not intend to declare or pay cash dividends on our common stock in the foreseeable future. Any future determination to pay dividends will be, subject to applicable law, at the discretion of our board of directors and will depend upon, among other factors, our results of operations, financial condition, contractual restrictions, and capital requirements.

Table of Contents

⁽¹⁾ The Balance Sheet Data table above reflects the early adoption of ASU 2015-03, Simplifying the Presentation of Debt Issuance, and ASU 2015-17, Balance Sheet Classification of Deferred Taxes. The adoption of ASU 2015-03 resulted in the application of debt issuance costs as a reduction to the related debt liability; such costs were previously included in assets. The adoption of ASU 2015-17 resulted in all current deferred tax assets and current deferred tax liabilities being reported as non-current in 2015, while prior period deferred tax assets and deferred tax liabilities were not adjusted. We determined that neither adoption had a material effect on our financial position or earnings.

Table of Contents

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

The following discussion and analysis should be read in conjunction with our consolidated financial statements, the accompanying notes to these financial statements, and the other financial information that appears elsewhere in this Annual Report on Form 10-K. This Annual Report on Form 10-K contains predictions, estimates, and other forward-looking statements. All statements other than statements of historical fact contained in this Annual Report on Form 10-K are forward-looking statements, including those regarding our expectations about our growth; expanded sales and marketing efforts; market trends; investments to support continued growth, new service offerings, and infrastructure expansion; the expected benefits from the 'network effect'; acceleration of our entry into the inpatient market through use of the webOMR technology and integration of Razor Insights, LLC; changes in expenses related to operations, selling, marketing, research and development, general and administrative matters, and depreciation and amortization; liquidity matters; and the expected performance period and estimated term of our client relationships, as well as more general statements regarding our management's expectations for future financial and operational performance and expenditure, profitability, and business outlook. In some cases, you can identify forward-looking statements by terminology such as "may," "will," "should," "expects," "plans," "anticipates," "believes," "estimates," "predicts," "potential," or "continue;" the negative of these terms; or other comparable terminology.

Forward-looking statements are only current predictions and are subject to known and unknown risks, uncertainties, and other factors that may cause our actual results, levels of activity, performance, or achievements to be materially different from those anticipated by such statements. These factors include, among other things, those set forth in the section entitled "Risk Factors" and elsewhere in this Annual Report on Form 10-K.

Although we believe that the expectations reflected in the forward-looking statements contained in this Annual Report on Form 10-K are reasonable, we cannot guarantee future results, levels of activity, performance, or achievements.

Except as required by law, we are under no duty to update or revise any of such forward-looking statements, whether as a result of new information, future events, or otherwise, after the date of this Annual Report on Form 10-K.

Overview

athenahealth provides cloud-based business services that empower health care providers to achieve and sustain financial health while staying focused on quality patient care. These services are designed to minimize the hassles that health care providers and their staff face from complex billing rules, quality measurement and reporting, clinical documentation and data exchange, patient communication and referrals, and many related tasks that can take attention away from delivering care. We deliver the majority of our service offerings using a single instance of cloud-based software, which we refer to as athenaNet. These integrated service offerings include: revenue cycle and practice management, electronic health records ("EHR"), patient engagement, and order transmission.

Our model combines a cloud-based network, knowledge, and back-office work, which we refer to as network, knowledge and work, to help keep health care providers profitable and prepared for every change. Including our clients on the same instance of software creates a network effect. We believe that this network effect enables each client to benefit from the collective experience of other clients. As the network grows, we believe these benefits also expand. athenaNet acts as the conduit for the exchange of information among clients, payers, trading partners, and our staff of experts. It enables us to learn continuously, innovate with agility, and deliver instant updates that rapidly improve performance. In addition, our clients benefit from back-office administrative work that we perform on their behalf. This work ranges from receiving, scanning, and delivering incoming faxes to tracking claims with payers and managing denials. We automate this work whenever possible; when automation is not an option, we perform the work at massive scale with our teams of experts. The knowledge we gain from doing work for our clients is culled, curated, and captured within athenaNet through mechanisms that include a patented billing rules engine and clinical quality management engine. As we work with clients, payers, and other industry trading partners, more expert knowledge is infused into each service, which we believe makes athenaNet smarter and more powerful for our clients. This unique combination of network, knowledge, and work is fundamental to our service model and value proposition to clients. We also provide clients in the health care industry (e.g., pharmaceutical companies, managed care companies, and market research firms) the opportunity to sponsor clinical decision support services in order to engage with our Epocrates member network and offer the sale of subscriptions to Epocrates' premium drug and clinical reference tools to health care professionals.

For the year ended December 31, 2015, we generated revenue of \$924.7 million from the sale of our services compared to \$752.6 million for the year ended December 31, 2014 and \$595.0 million for the year ended December 31, 2013. Given the scope of our market opportunity, we have also increased our spending each year on growth, innovation, and infrastructure.

Our revenue is predominately derived from our athenahealth-branded business services, which excludes revenue from Epocrates-branded services, third-party tenant revenue, and other non-core revenue. In most cases, we charge clients a percentage of payments collected by us on behalf of our clients, connecting our financial results directly to that of our clients

Table of Contents

and our ability to drive revenue to medical practices. Therefore, the key drivers of our revenue include growth in the number of physicians and other health care providers working within our client accounts, the collections of these physicians and providers, and the number of services purchased. To provide these services, we incur expenses in several categories, including direct operating, selling and marketing, research and development, general and administrative, and depreciation and amortization expense. In general, our direct operating expense increases as our volume of work increases, whereas our selling and marketing expense increases in proportion to our intended growth rate of adding new accounts to our network of physician and hospital clients. Our research and development, general and administrative, and depreciation and amortization expense categories are less directly related to growth of revenues and relate more to our planning for the future, our overall business management activities, and our infrastructure. We manage our cash and our use of credit facilities to ensure adequate liquidity and to ensure adherence to related financial covenants.

During 2014, we began to sell go-live and training support services separately from the required implementation services. Fees associated with required implementation services are included in our ongoing monthly rate; therefore, they are being recognized ratably over the customer life. Go-live and training support services can be purchased by the customer from us or third-party vendors, and therefore, are recognized upon delivery of service. Previously deferred revenue balances related to implementation services, including go-live and training support services, will continue to be amortized over those remaining customer lives. The effect of this change was not significant, nor do we expect that it will ever be significant, to our consolidated revenue.

Critical Accounting Policies

Our discussion and analysis of our financial condition and results of operations are based on our consolidated financial statements, which have been prepared in accordance with generally accepted accounting principles in the United States (“GAAP”). In connection with the preparation of our consolidated financial statements, we are required to make assumptions and estimates about future events and apply judgments that affect the reported amounts of assets and liabilities, the disclosures of contingent assets and liabilities as of the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. We base our assumptions, estimates and judgments on historical experience, current trends, and other factors we believe to be relevant at the time we prepare our consolidated financial statements. The accounting estimates used in the preparation of our consolidated financial statements will change as new events occur, as more experience is acquired, as additional information is obtained, and as our operating environment changes. On a regular basis, we review the accounting policies and assumptions, and update our assumptions, estimates, and judgments to ensure that our consolidated financial statements are presented fairly and in accordance with GAAP. We may employ outside experts to assist in our evaluations. However, because future events and their effects cannot be determined with certainty, actual results could differ from our assumptions and estimates, and such differences could be material.

Our significant accounting policies are discussed in Note 1 – Nature of Operations and Summary of Significant Accounting Policies, to our accompanying consolidated financial statements. We believe the following accounting policies are the most critical to aid in fully understanding and evaluating our reported financial results, as they require management to make difficult, subjective or complex judgments, and to make estimates about the effect of matters that are inherently uncertain. We have reviewed these critical accounting policies and related disclosures with the Audit Committee of our Board of Directors.

Description	Judgment and Uncertainties	Effect if Actual Results Differ from Assumptions
Revenue Recognition		
<p>All revenue, other than initial implementation and provider adds revenue, is recognized when the service is performed. We recognize revenue when there is evidence of an arrangement, the service has been provided to the client, the collection of the fees is reasonably assured, and the amount of fees to be paid by the client is fixed or determinable. We derive the majority of our revenue from business services associated with our integrated services and from subscriptions to and sponsored clinical information and decision support services for our point of care medical application. Our integrated services consist of revenue cycle and practice management, EHR, patient engagement, and order transmission.</p>	<p>Determining whether and when some of our revenue recognition criteria have been satisfied often involves judgments that can have a significant impact on the timing and amount of revenue we report. For example, our assessment of the likelihood of collection is a critical element in determining the timing of revenue recognition. If we do not believe that collection is reasonably assured, revenue is not recognized.</p>	<p>Although we believe that our approach to estimates and judgments is reasonable, actual results could differ, and we may be exposed to increases or decreases in revenue that could be material.</p>
<p>Our clients typically purchase one-year service contracts related to our integrated services that renew automatically. In most cases, our clients may terminate their agreements with 90 days notice without cause. We typically retain the right to terminate client agreements in a similar timeframe. Our clients are billed monthly, in arrears, based upon a percentage of collections posted to our network, athenaNet; minimum fees; flat fees; or per-claim fees, where applicable. We do not recognize revenue for business services until these collections are made, as the fees are not fixed and determinable until such time. Invoices are generated within the first two weeks of the subsequent month and delivered to clients primarily by e-mail. For most of our clients, amounts due are then deducted from a pre-defined bank</p>	<p>Multiple element arrangements require judgments as to how to allocate the arrangement consideration to each deliverable. We maintain a standard price list by service; however, certain incentives, such as discounts, may be offered to clients. Due to the variability in the amount of discount offered for individual services across multiple contracts, we have not been able to conclude that a consistent number of stand-alone sales of a deliverable have been priced within a reasonably narrow range in order to assert that we have established vendor-specific objective evidence (“VSOE”) of fair value.</p> <p>When we cannot establish VSOE of fair value, we determine if we can establish third-party evidence (“TPE”) of fair value. TPE is determined based on competitor prices for similar deliverables when sold separately. Our services differ significantly from that of our peers and our offerings contain a significant level of customization and differentiation such that the comparable pricing of products with similar functionality</p>	<p>Our calculation of BESP may prove to be inaccurate, in which case we may have understated or overstated the revenue recognized in an accounting period. For example, if our BESP is too high or too low for an individual deliverable or group of deliverables, the amount of revenue recognized within each reporting period would be inaccurate. The amount of deferred revenue related to separable deliverables with BESP is \$23.1 million and \$22.6 million as of December 31, 2015 and 2014, respectively.</p>
		<p>Our estimate of the expected performance period may prove to be inaccurate, in which case we may have understated or overstated the revenue recognized in an accounting period. For example, if, in the future, we need to increase our expected performance period to a period longer than 12 years, the amount we would recognize in each accounting period would decrease. On the other hand, if, in the future, we need to decrease our expected performance period to a period shorter than 12 years, the amount we would recognize in each accounting period would increase. The amount of deferred revenue related to initial implementation and provider add fees is \$62.9 million and \$60.4 million as of December 31, 2015 and 2014, respectively.</p>

account one week after invoice receipt cannot be obtained. Furthermore, we via an auto-debit transaction. Unbilled are unable to reliably determine what amounts that have been earned are similar competitor products' selling accrued and recorded as revenue or prices are on a stand-alone basis. deferred revenue, as appropriate, and Therefore, we are unable to are included in our accounts receivable determine TPE. balances.

Description	Judgment and Uncertainties	Effect if Actual Results Differ from Assumptions
<p>Subscriptions to the Epocrates point of care medical application are entered into by members via an internal or third-party digital distribution platform or through a redeemable license code which expires within six to 12 months of issuance. Basic subscriptions are free and do not expire. Premium subscription fees are assessed on the length of the subscription period, typically one year, and payment occurs at the time of order, which is in advance of the services being performed; such payments are therefore recorded as deferred revenue. Premium subscriptions are recognized ratably over the contracted term of delivery. If a license code expires before it is redeemed, revenue is recognized upon expiration.</p>	<p>Since VSOE and TPE do not exist, we use BESP to establish fair value and to allocate total consideration to each element in the arrangement. We determine BESP for a service by performing an analysis of recent stand-alone sales of that service, which takes into account market conditions, competitive landscape, internal costs, gross margin objectives, and pricing practices.</p>	
<p>Sponsored clinical information and decision support service clients typically enter into one-year arrangements containing various services. These clients are charged a fee for the group of services to be provided and are typically billed a portion of the contracted fee upon signing of the agreement with the balance billed upon one or more future milestones. Because billings typically occur in advance of services being performed, these amounts are recorded as deferred revenue when billed. Each service deliverable within these multiple element arrangements is accounted for as a separate unit if the delivered item or items have value to the customer on a stand-alone basis. Our revenue arrangements do not include a general right of return, as we deliver services and not products. We consider a deliverable to have stand-alone value if we sell this item separately or if the item is sold by another vendor or could be resold by</p>	<p>Multiple element arrangements require judgment as to whether deliverables meet the criteria to be separated into separate units of accounting. We consider a deliverable to have stand-alone value if we sell this item separately or if the item is sold by another vendor or could be resold by the client. We concluded that our past go to market strategy of charging initial implementation services, as well as subsequent provider add fees, related to our integrated services was not separable from the ongoing business services, as these services did not have value to the customer on a stand-alone basis. As these services did not have stand-alone value, they were recognized ratably over the longer of the life of the agreement or the expected customer life.</p> <p>During 2014, we began to sell initial go-live and training support services separate from the initial required implementation services. Go-live and training support services can be purchased from us or third-party vendors, and therefore, have stand-alone value and are recognized upon delivery of service. Previously deferred revenue balances related to initial implementation services that were billed upfront and did not have</p>	

the customer.

stand-alone value will continue to be amortized over those remaining customer lives. Also, in 2014, we began to include the fees associated with the initial required implementation services in our ongoing monthly rate; therefore, they are being recognized ratably over the customer life.

Description	Judgment and Uncertainties	Effect if Actual Results Differ from Assumptions
<p>Each service deliverable within these multiple element arrangements is then accounted for as a separate unit; deliverables not meeting the criteria for being a separate unit of accounting are combined with a deliverable that does meet that criterion, and we allocate arrangement consideration to each deliverable using our best estimate of selling price (“BESP”). Any discount or premium inherent in the arrangement is allocated to each element in the arrangement based on the relative fair value of each element.</p>	<p>The determination of the amount of revenue we can recognize each accounting period requires management to make estimates and judgments on the expected customer life. We determined the expected customer life considering the following key factors:</p> <ul style="list-style-type: none"> - Renewal rate considerations - Economic life of the service - Industry data 	
<p>Certain expenses related to the implementation of a customer, such as out-of-pocket travel, are typically reimbursed by the customer. This is accounted for as both revenue and expense in the period the cost is incurred. Other services consist primarily of tenant revenue which is straight-lined over the term of the lease.</p>	<p>The expected customer life, or expected performance period, for the years presented is 12 years.</p>	

Description	Judgment and Uncertainties	Effect if Actual Results Differ from Assumptions
<p>Purchased Intangible Assets and Goodwill</p>	<p>Critical estimates in valuing certain intangible assets and the fair value of the reporting unit during goodwill impairment tests include, but are not limited to, identifying reporting units, historical and projected customer retention rates, anticipated growth in revenue from the acquired customers, expected future cash outflows, the allocation of those cash flows to identifiable intangible assets, estimated useful lives of these intangible assets, and a probability-weighted income approach based on scenarios in estimating achievement of operating results.</p>	<p>Future business and economic conditions, as well as differences actually related to any of the assumptions, could materially impact the financial statements through impairment of goodwill or intangible assets, and acceleration of the amortization period of the purchased intangible assets, which are finite-lived assets.</p>
<p>Business Combinations, including purchased intangible assets are accounted for at fair value. Acquisition costs are expensed as incurred and recorded in general and administrative expenses. Measurement period adjustments relate to adjustments to the fair value of assets acquired and liabilities assumed based on information that we should have known at the time of acquisition. All changes to purchase accounting that do not qualify as measurement period adjustments are included in current period earnings. The fair value amount assigned to intangible assets is based on an exit price from a market participant's viewpoint, and utilizes data such as discounted cash flow analysis and replacement cost models. We review acquired intangible assets for impairment whenever events or changes in circumstances indicate that the carrying amount of such assets may not be recoverable.</p>	<p>Significant judgment in testing goodwill for impairment also includes assigning assets and liabilities to the reporting unit and determining the fair value of each reporting unit based on management's best estimates and assumptions, as well as other information compiled by management, including valuations that utilize customary valuation procedures and techniques.</p>	<p>As of December 31, 2015, the carrying amounts of goodwill and purchased intangible assets were \$229.2 million and \$126.2 million, respectively. As of December 31, 2014, the carrying amounts of goodwill and purchased intangible assets were \$198.0 million and \$139.4 million, respectively.</p>
<p>Goodwill is recorded as the difference, if any, between the aggregate consideration paid for an acquisition and the fair value of the identifiable net tangible and intangible assets acquired. Goodwill is not amortized but is evaluated for impairment annually on November 30th or more frequently if indicators of impairment are present or changes in circumstances suggest that impairment may exist. The first step of the goodwill impairment test compares the fair value of the reporting unit with its carrying amount, including goodwill. If the fair value of our reporting unit exceeds its carrying amount, the</p>	<p>Management's best estimates and assumptions are employed in determining the appropriateness of these assumptions as of the acquisition date and for each subsequent period.</p>	

goodwill of the reporting unit is not considered to be impaired. If the carrying amount of our reporting unit exceeds its fair value, the second step of the goodwill impairment test is performed to measure the amount of impairment loss, if any. The second step of the goodwill impairment test, used to measure the amount of impairment loss, compares the implied fair value of the affected reporting unit's goodwill with the carrying value of that goodwill.

Description	Judgment and Uncertainties	Effect if Actual Results Differ from Assumptions
<p>Capitalized Software Costs</p>	<p>Significant judgments related to internally-developed software include determining whether it is probable that projects will result in new or additional functionality; concluding on when the application development phase starts and ends; and deciding which costs, especially employee compensation costs, should be capitalized. Additionally, there is judgment applied to the useful lives of capitalized software; we have concluded that the useful lives for capitalized internally-developed software are two to five years.</p> <p>Purchased internally-developed capitalized software requires judgment regarding its relative fair value among the other assets or liabilities acquired. Any services purchased from the acquiree, as well as contingent payments post-acquisition, must be assessed to ensure only costs associated with creating new or additional functionality within the application development phase are capitalized. Transaction costs are generally capitalized as part of asset acquisitions.</p> <p>Company management employs its best estimates and assumptions in determining the appropriateness of the judgments noted above on a project-by-project basis during initial capitalization as well as subsequent measurement.</p>	<p>While we believe that our approach to estimates and judgments is reasonable, actual results could differ, and such differences could lead to an increase or decrease in expense.</p> <p>As of December 31, 2015, the carrying amounts of internally-developed capitalized software and purchased internally-developed capitalized software via asset acquisition were \$70.0 million and \$22.0 million, respectively. As of December 31, 2014, the carrying amounts of internally-developed capitalized software and purchased internally-developed capitalized software via asset acquisition were \$45.6 million and \$0 million, respectively.</p>
<p>All of our software is considered internal use for accounting purposes, as we do not market or sell our software. As a result, we capitalize certain costs associated with the creation of internally-developed software for internal use (i.e., athenaNet), the purchase of internally-developed software via asset acquisition (i.e., webOMR), and third-party software licenses. The total of these costs are recorded in the Capitalized Software Costs line on our Consolidated Balance Sheets. We capitalize costs incurred during the application development stage related to the development of athenaNet services and other internally-developed software for internal use including those acquired via asset acquisition. Costs incurred during the application development phase are capitalized only when we believe it is probable that the development will result in new or additional functionality. The types of costs capitalized during the application development phase include employee compensation (including stock-based compensation), as well as external consultant fees for individuals working on these projects. Costs related to the preliminary project stage and post-implementation activities are expensed as incurred. Capitalized internal-use software is amortized on a straight-line basis over its estimated useful life when the asset has been placed in service for general availability.</p>		

Table of Contents

Financial Operations Overview

Revenue. We derive our revenue from two sources: business services, and implementation and other services. Business services primarily consists of revenue from our revenue cycle and practice management service; EHR service; patient engagement service; order transmission service; patient access and care coordination service; population health management service; subscriptions, sponsored clinical information, and decision support services for our point of care clinical application (Epocrates); and consulting, training, and go-live support. No customers accounted for a significant amount of revenues for the years ended December 31, 2015, December 31, 2014, and December 31, 2013.

Business services revenue accounted for 96% for the year ended December 31, 2015, and 95% of our total revenues for both of the years ended December 31, 2014 and 2013. Business services revenue for athenahealth-branded services is typically 2% to 8% of a practice's total collections depending upon the services purchased, the size, complexity, and other characteristics of the practice, plus a per statement charge for certain billing statements that are generated for patients. Accordingly, business services revenue is largely driven by: the number of physician practices and other service providers we serve, the number of physicians and other medical providers working in those physician practices, the volume of activity and related collections of those physicians, the mix of our services used by those physician practices and other medical providers, and our contracted rates. There is moderate seasonality in the activity level of physician practices. Typically, discretionary use of physician services declines in the late summer and during the holiday season, which leads to a decline in collections by our physician clients about 30 to 50 days later. Our pharmaceutical clients' budgeting process impacts the timing of revenue related to sales of sponsored clinical information and decision support services, which have historically been highest in the fourth quarter. Additionally, the volume of activity and related collections vary from year to year based in large part on the severity, length, and timing of the onset of the cold and flu season. While we believe that the severity, length, and timing of the onset of the cold and flu season will continue to impact collections by our physician clients, there can be no assurance that our future sales of these services will necessarily follow historical patterns.

Implementation and other services revenue consists primarily of the amortization of deferred revenue on implementation services, as well as third-party tenant revenue. We expect the amortization of deferred implementation fees to remain constant or decline, as we began including implementation fees in our ongoing monthly rate in 2014 and charging separately for training and go-live services, which can also be purchased from a third-party vendor. Additionally, we expect third-party tenant revenue to decline in the foreseeable future as tenants vacate and we occupy the previously rented space at our corporate headquarters.

Direct Operating Expense. Direct operating expense consists primarily of compensation expense (including stock-based compensation) related to personnel who provide services, including implementation of new clients, costs associated with our business partner outsourcing arrangements and clearing house, and claim processing costs. We expense implementation costs as incurred. We include in direct operating expense all service costs incurred to fulfill our customer contracts. We expect to increase our overall level of automation as we become a larger operation, with higher volumes of work in particular functions, geographies, and medical specialties. Although we expect that direct operating expense will increase in absolute terms for the foreseeable future, direct operating expense is expected to decline as a percentage of revenue as we increase automation. Direct operating expense also includes costs associated with third-party tenant and other non-core revenue. Direct operating expense does not include allocated amounts for rent, occupancy costs, depreciation, or amortization, except for amortization related to certain purchased intangible assets.

Selling and Marketing Expense. Selling and marketing expense consists primarily of compensation expense (including stock-based compensation) for sales and marketing employees and marketing programs (including trade shows, brand messaging, and online initiatives). Although we recognize substantially all of our revenue when services have been delivered, we recognize a large portion of our sales commission expense at the time of contract signature and an additional portion at the time our services commence. Accordingly, we incur a portion of our sales and marketing expense prior to the recognition of the corresponding revenue. We expect to continue to increase our investment in sales and marketing by hiring additional personnel and investing in marketing campaigns to increase our access to

health care provider organizations, as well as increase the awareness of athenahealth in the marketplace. As a result, we expect that, in the near-term, selling and marketing expense will increase in line with our intended revenue growth. As we begin to leverage lower cost sales channels, we expect selling and marketing expense to decline as a percentage of revenue over time. Sales and marketing expense does not include allocated amounts for rent, occupancy costs, depreciation, or amortization, except for amortization related to certain purchased intangible assets.

Research and Development Expense. Research and development expense consists primarily of compensation expense (including stock-based compensation) for research and development employees and consulting fees for third-party developers. We expect that, in the near-term, research and development expenditures will increase in absolute terms and will likely remain constant as a percentage of revenue as we develop and enhance new and existing services; however, the amount of expenditures that should be capitalized as software costs versus expensed as research and development could vary based on the specific

Table of Contents

projects we undertake. Research and development expense does not include allocated amounts for rent, occupancy costs, depreciation, or amortization.

General and Administrative Expense. General and administrative expense consists primarily of compensation expense (including stock-based compensation) for administrative employees, occupancy and other indirect costs (including building maintenance and utilities), and outside professional fees for accountants, lawyers, and consultants. We expect that general and administrative expense will increase in absolute terms as we invest in infrastructure to support our growth. Though expenses are expected to continue to rise in absolute terms, we expect general and administrative expense to decline as a percentage of revenue over time.

Depreciation and Amortization Expense. Depreciation and amortization expense consists primarily of depreciation of fixed assets over the determined useful lives and amortization of capitalized software over a two to five-year period from the time it is ready for its intended use. As we grow, we will continue to make capital investments in the infrastructure of the business and we will continue to capitalize software that we develop. We expect depreciation and amortization expense to increase as we make investments to support our continued growth, new service offerings, and infrastructure expansion.

Interest Expense. Interest expense consists primarily of interest costs related to our term and revolving loans under our current credit facility and the amortization of deferred financing fees.

Other Income (Expense). Other income (expense) consists primarily of gains realized from the sale of marketable securities. We previously invested a total of \$1.1 million in Castlight Health, Inc. ("Castlight"), a leading provider of cloud-based software that enables enterprises to control health care costs. This investment was initially recorded at cost. On March 14, 2014, an initial public offering ("IPO") of shares of Castlight's Class B common stock was made available for sale on the New York Stock Exchange under the symbol "CSLT." As a result of the IPO, we classified this investment as "available-for-sale" and marked the shares we hold to market based on quoted market prices. As of December 31, 2014, the aggregate fair value of the investment was \$41.0 million and was recorded in the Marketable securities line on the Consolidated Balance Sheet. As of December 31, 2015, all shares held in Castlight have been sold.

Income Tax (Provision) Benefit. Income tax (provision) benefit relates to federal and state jurisdictions in the United States and India. The difference between our effective tax rate and our statutory tax rate is primarily related to the fact that we have certain permanent items which include, but are not limited to, the treatment of Incentive Stock Options ("ISOs"), our employee stock purchase plan, the impact of tax deduction limits related to certain of our highly compensated officers, lobbying, meals and entertainment, and transaction costs associated with stock acquisitions. Transaction costs related to stock acquisitions are primarily non-tax deductible. We are currently experiencing volatility in our effective tax rate due to the timing of discrete other income items.

Recent Developments

2015 Senior Credit Facility

On May 5, 2015, we entered into an amended and restated credit agreement (the "2015 Credit Agreement"). The 2015 Credit Agreement amended and restated our previous credit agreement, dated as of May 10, 2013 (the "2013 Credit Agreement"), and provides for a \$500.0 million senior credit facility consisting of a \$300.0 million unsecured term loan facility and a \$200.0 million unsecured revolving credit facility (the "2015 Senior Credit Facility"). The term loans from the 2013 Credit Agreement were increased by \$130.0 million and a portion of those proceeds were used to repay the outstanding revolving loans under the 2013 Credit Agreement such that there were no revolving loans outstanding on the closing of the 2015 Credit Agreement.

webOMR

On January 23, 2015, we signed an agreement to purchase a suite of internally-developed clinical applications and an EHR system from Beth Israel Deaconess Medical Center ("BIDMC") referred to as webOMR for \$22.0 million in cash.

The agreement also provides for up to an additional \$18.0 million in contingent payments upon achievement of certain milestones in the future. In connection with the purchase of the webOMR technology, the parties also entered into a two-year collaboration agreement under which BIDMC will provide ongoing consultation services with respect to the webOMR technology and provide one of its facilities as a testing site for a new inpatient service offering.

RazorInsights

On January 13, 2015, we acquired Razor Insights, LLC (“RazorInsights”), a provider of cloud-based billing and EHR software services to rural and community hospitals, for \$39.9 million in cash after net working capital adjustments. The fair

Table of Contents

value of net assets acquired was \$8.9 million, including purchased intangible assets of \$7.0 million related to technology acquired and \$4.0 million related to customer relationships. The \$31.1 million excess of purchase consideration over the fair value of net assets acquired is allocated to goodwill, which is deductible for U.S. income tax purposes. We incurred transaction costs in connection with the acquisition of \$0.3 million, which are included in general and administrative expenses. We purchased webOMR and acquired RazorInsights to accelerate our entry into the inpatient market.

New Accounting Pronouncements

In November 2015, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update (“ASU”) 2015-17, Balance Sheet Classification of Deferred Taxes, which will require entities to present all deferred tax assets (“DTAs”) and deferred tax liabilities (“DTLs”) as non-current on the balance sheet. This guidance is effective for public companies for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2016. Early adoption is permitted, and entities may choose whether to adopt this update prospectively or retrospectively. We have evaluated ASU 2015-17 and determined that its adoption will not have a material effect on our financial position or earnings.

On December 31, 2015, we elected to adopt ASU 2015-17 and change our method of classifying DTAs and DTLs as either current or non-current to classifying all DTAs and DTLs as non-current, and have chosen to apply a prospective method. Prior balance sheets were not retrospectively adjusted.

In September 2015, the FASB issued ASU 2015-16, Simplifying the Accounting for Measurement-Period Adjustments, that eliminates the requirement to restate prior period financial statements for measurement period adjustments. The new guidance requires that the cumulative impact of a measurement period adjustment (including the impact on prior periods) be recognized in the reporting period in which the adjustment is identified. The new standard should be applied prospectively to measurement period adjustments that occur after the effective date. This guidance is effective for public companies for interim and annual periods beginning after December 15, 2015. Early adoption is permitted for all entities. We have evaluated ASU 2015-16 and determined that its adoption will not have a material effect on our financial position or earnings.

In April 2015, the FASB issued ASU 2015-03, Simplifying the Presentation of Debt Issuance, which changes the presentation of debt issuance costs in financial statements. Under this guidance, an entity will present such costs in the balance sheet as a reduction of the related debt liability rather than as an asset. This guidance is effective for public companies for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2015. Early adoption is permitted for all entities for financial statements that have not been previously issued. We have evaluated ASU 2015-03 and determined that its adoption will not have a material effect on our financial position or earnings. On December 31, 2015, we elected to adopt ASU 2015-03 and change our method of classifying debt issuance costs whereby we will include debt issuance costs as a reduction to the related debt liability. The guidance was applied on a retrospective basis as prior balance sheets were adjusted.

In May 2014, the FASB issued ASU 2014-09, Revenue from Contracts with Customers. This standard outlines a single comprehensive model for entities to use in accounting for revenue arising from contracts with customers and supersedes most current revenue recognition guidance, including industry-specific guidance. In addition, ASU 2014-09 provides guidance on accounting for certain revenue-related costs including, but not limited to, when to capitalize costs associated with obtaining and fulfilling a contract. ASU 2014-09 provides companies with two implementation methods. Companies can choose to apply the standard retrospectively to each prior reporting period presented (full retrospective application) or retrospectively with the cumulative effect of initially applying the standard as an adjustment to the opening balance of retained earnings of the annual reporting period that includes the date of initial application (modified retrospective application). This guidance was effective for annual reporting periods beginning after December 15, 2016.

In August 2015, the FASB issued ASU 2015-14, Revenue from Contracts with Customers. The amendments in this ASU defer the effective date of ASU 2014-09. Public companies should apply the guidance in ASU 2014-09 to annual reporting periods beginning after December 15, 2017, including interim periods within that reporting period. Early adoption is permitted only as of annual reporting periods beginning after December 15, 2016, including interim reporting periods within that reporting period. We continue to evaluate the expected impact of this new guidance and available adoption methods.

Results of Operations

Consolidated Results of Operations

The following table sets forth our consolidated results of operations as a percentage of total revenue for the years ended December 31, 2015, 2014, and 2013:

	Year Ended December 31,					
	2015		2014		2013	
Revenue:						
Business services	95.8	%	94.5	%	94.7	%
Implementation and other	4.2		5.5		5.3	
Total revenue	100.0		100.0		100.0	
Expense:						
Direct operating	39.6		40.2		40.1	
Selling and marketing	24.9		25.2		25.1	
Research and development	10.2		9.2		9.7	
General and administrative	15.6		16.6		16.8	
Depreciation and amortization	10.1		8.6		7.3	
Total expense	100.4		99.9		99.0	
Operating (loss) income	(0.4)	0.1		1.0	
Other income (expense):						
Interest expense	(0.6)	(0.6)	(0.7)
Other income (expense)	3.1		—		0.1	
Total other income (expense)	2.5		(0.6)	(0.6)
Income (loss) before income tax (provision) benefit	2.0		(0.5)	0.4	
Income tax (provision) benefit	(0.5)	0.1		—	
Net income (loss)	1.5	%	(0.4)%	0.4	%

Percentages for each line item may not sum to the totals or subtotals for each fiscal year due to rounding.

Comparison of the Years Ended December 31, 2015 and 2014

	Year Ended December 31,		Change		
	2015	2014	Amount	Percent	
	(in thousands)				
Business services revenue	\$886,075	\$711,234	\$174,841	25	%
Implementation and other revenue	38,653	41,365	(2,712) (7)%
Total	\$924,728	\$752,599	\$172,129	23	%

Total revenue for the year ended December 31, 2015 increased due to an increase in business services revenue. The increase in business services revenue was primarily driven by the growth in the number of physicians and providers using our services. The increases in the number of physicians and providers using our revenue cycle and practice management service; EHR service; and patient engagement service; are as follows:

		As of December 31,			
		2015	2014	Change	Percent
Revenue cycle and practice management	Physicians	55,277	45,423	9,854	22 %
	Providers	75,416	62,349	13,067	21 %
EHR	Physicians	24,867	18,811	6,056	32 %
	Providers	32,684	24,804	7,880	32 %
Patient engagement	Physicians	40,635	32,163	8,472	26 %
	Providers	52,821	41,777	11,044	26 %

Table of Contents

Also contributing to this increase was the growth in related collections on behalf of these physicians and providers. The amount of collections processed was as follows:

	Year Ended December 31,		Change		
	2015	2014	Amount	Percent	
Collections processed	(in millions)				
	\$18,829	\$14,958	\$3,871	26	%

	Year Ended December 31,		Change		
	2015	2014	Amount	Percent	
Direct operating	(in thousands)				
	\$366,559	\$302,539	\$64,020	21	%

Direct Operating Expense. Direct operating expense increased primarily due to compensation costs, including stock-based compensation expense, which increased \$37.5 million in the year ended December 31, 2015, as a result of a 28% increase in headcount from December 31, 2014. We increased headcount due to the increase in the number of providers added to the network, as well as to start a go-live support team during the year ended December 31, 2015. In addition, costs associated with our business partner outsourcing and clearing house activities increased \$14.2 million, as the number of claims that we processed on behalf of our clients increased during the year ended December 31, 2015. The total claims submitted on behalf of clients were as follows:

	Year Ended December 31,		Change		
	2015	2014	Amount	Percent	
Total claims submitted	(in millions)				
	144	116	28	24	%

	Year Ended December 31,		Change		
	2015	2014	Amount	Percent	
Selling and marketing	(in thousands)				
	\$229,901	\$189,688	\$40,213	21	%
Research and development	94,254	69,461	24,793	36	%
General and administrative	144,577	125,192	19,385	15	%
Depreciation and amortization	93,493	64,764	28,729	44	%
Other (income) expense	(22,942)	4,819	(27,761)	576	%
Total	\$539,283	\$453,924	\$85,359	19	%

Selling and Marketing Expense. Selling and marketing expense increased for the year ended December 31, 2015, primarily due to increases in compensation costs and other general selling and marketing-related costs. The increase in compensation, which included commissions and stock-based compensation, for the year ended December 31, 2015 was \$25.0 million, and was largely due to a 15% increase in headcount from December 31, 2014. We hired additional sales personnel to focus on adding new customers and increasing penetration within new and existing markets. Additionally, other general selling and marketing-related costs increased \$15.3 million (including increases in online media of \$8.2 million and offline media of \$2.2 million)

Table of Contents

for the year ended December 31, 2015.

Research and Development Expense. The increase in research and development expense was primarily due to higher compensation costs, including stock-based compensation expense, which increased \$19.0 million for the year ended December 31, 2015, largely due to a 34% increase in headcount from December 31, 2014. The additional research and development personnel were necessary in order to upgrade and expand our service offerings and develop new technologies.

General and Administrative Expense. General and administrative expense increased in the year ended December 31, 2015, primarily due to compensation costs, including stock-based compensation expense, and lease termination costs. Compensation costs increased \$9.6 million for the year ended December 31, 2015, largely due to a 23% increase in headcount from December 31, 2014. Additionally, general and administrative expense increased \$4.6 million in the year ended December 31, 2015 due to lease termination costs incurred as a result of our growth and evolving strategy. In the year ended December 31, 2015, income from governmental bodies increased \$3.0 million, which offset general and administrative expense, due to our participation in incentive programs.

Depreciation and Amortization Expense. Depreciation and amortization expense increased for the year ended December 31, 2015. This increase was primarily due to \$18.4 million of amortization related to an increase in our software costs for the year ended December 31, 2015, and partially due to \$10.4 million of depreciation due to a higher fixed asset base.

Other Income (Expense). Other income (expense) increased due to gains realized from the sale of marketable securities during the year ended December 31, 2015.

	Year Ended December 31,		Change	
	2015	2014	Amount	Percent
	(in thousands)			
Income tax (provision) benefit	\$ (4,859)	\$ 745	\$ (5,604)	(752)%
Effective tax rate	26	% 19	%	

Income Tax (Provision) Benefit. The difference in our effective tax rate for the year ended December 31, 2015, compared to the year ended December 31, 2014, is primarily due to discrete items, specifically, the sale of marketable securities.

Comparison of the Years Ended December 31, 2014 and 2013

	Year Ended December 31,		Change	
	2014	2013	Amount	Percent
	(in thousands)			
Business services revenue	\$ 711,234	\$ 563,237	\$ 147,997	26 %
Implementation and other revenue	41,365	31,766	9,599	30 %
Total	\$ 752,599	\$ 595,003	\$ 157,596	26 %

Total revenue for the year ended December 31, 2014 increased primarily due to an increase in business services revenue.

The increase in business services revenue is primarily driven by the growth in the number of physicians and providers using our services. The increases in the number of physicians and providers using our revenue cycle and practice management service; EHR service; and patient engagement service; are as follows:

		As of December 31,		Change	
		2014	2013	Number	Percent
		Number	Number	Number	Percent
Revenue cycle and practice management	Physicians	45,423	35,858	9,565	27 %
	Providers	62,349	50,212	12,137	24 %
EHR	Physicians	18,811	12,388	6,423	52 %
	Providers	24,804	16,805	7,999	48 %
Patient engagement	Physicians	32,163	21,516	10,647	49 %

Providers	41,777	28,360	13,417	47	%
-----------	--------	--------	--------	----	---

Table of Contents

Also contributing to this increase was the growth in related collections on behalf of these physicians and providers. The amount of collections processed is as follows:

	Year Ended December 31,		Change		
	2014	2013	Amount	Percent	
	(in millions)				
Collections processed	\$14,958	\$11,664	\$3,294	28	%

Implementation and Other Revenue. Implementation and other revenue increased primarily due to third-party tenant revenue and travel reimbursement, which increased \$4.5 million and \$2.1 million for the year ended December 31, 2014, respectively.

	Year Ended December 31,		Change		
	2014	2013	Amount	Percent	
	(in thousands)				
Direct operating	\$302,539	\$238,672	\$63,867	27	%

Direct Operating Expense. Direct operating expense increased primarily due to employee-related costs, including stock-based compensation, which increased \$28.7 million in the year ended December 31, 2014, as a result of a 17% increase in headcount from December 31, 2013. Additionally, costs associated with external consulting services increased \$6.9 million in the year ended December 31, 2014. We increased headcount and the use of consultants due to the increase in number of providers added to the network during the year ended December 31, 2014.

In addition, costs associated with our business partner outsourcing arrangements and clearing house increased \$12.8 million, as the number of claims that we processed on behalf of our clients increased during the year ended December 31, 2014. The total claims submitted on behalf of clients are as follows:

	Year Ended December 31,		Change		
	2014	2013	Amount	Percent	
	(in millions)				
Total claims submitted	116	91	25	27	%

Direct operating expense for the year ended December 31, 2014 also increased \$2.5 million due to costs associated with third-party tenant revenue.

	Year Ended December 31,		Change		
	2014	2013	Amount	Percent	
	(in thousands)				
Selling and marketing	\$189,688	\$149,488	\$40,200	27	%
Research and development	69,461	57,639	11,822	21	%
General and administrative	125,192	99,776	25,416	25	%
Depreciation and amortization	64,764	43,575	21,189	49	%
Total	\$449,105	\$350,478	\$98,627	28	%

Selling and Marketing Expense. The increase in selling and marketing expense was in part due to compensation costs, including stock-based compensation expense, internal sales commissions, and external channel partner commissions, which increased approximately \$17.2 million for the year ended December 31, 2014, largely due to a 23% increase in headcount from December 31, 2013. We hired additional sales personnel to focus on adding new customers and increasing penetration within our existing markets. Additionally, amortization related to purchased intangible assets allocated to selling and marketing expense increased \$9.1 million for the year ended December 31, 2014, compared to

the year ended December 31, 2013, primarily due to our acquisition of Epocrates during the three months ended March 31, 2013. Also contributing to the increase in selling and marketing expense was a \$10.7 million increase in our marketing program costs for the year ended December 31, 2014, compared to the year ended December 31, 2013.

Table of Contents

Research and Development Expense. The increase in research and development expense was primarily due to higher compensation costs, including stock-based compensation expense, which increased approximately \$10.3 million for the year ended December 31, 2014, largely due to a 41% increase in headcount from December 31, 2013. The additional research and development personnel were necessary in order to upgrade and expand our service offerings and develop new technologies.

General and Administrative Expense. General and administrative expense increased in the year ended December 31, 2014 primarily due to higher compensation costs and facilities-related expenses. Compensation costs, including stock-based compensation unrelated to the Epocrates acceleration of vesting associated with our acquisition, increased approximately \$19.3 million for the year ended December 31, 2014, largely due to an 22% increase in headcount from December 31, 2013. We increased our general and administrative personnel to support our growth. Facilities-related expenses, which include rent expense, increased \$11.8 million for the year ended December 31, 2014. The increase in headcount drove an increased investment in our infrastructure, which resulted in expansion in four of our locations. The increase in general and administrative expense for the year ended December 31, 2014 was partially offset by the absence of \$11.8 million of transaction and integration costs we incurred associated with the Epocrates and Arsenal transactions and stock-based compensation related to the acceleration of vesting for certain Epocrates employees upon termination during the year ended December 31, 2013. Finally, the year ended December 31, 2013 reflected a \$2.5 million net gain due to the early termination of our lease and the realization of the remaining balance in deferred rent upon our acquisition of the Arsenal on the Charles.

Depreciation and Amortization Expense. Depreciation and amortization expense increased for the year ended December 31, 2014. This increase was partially due to \$15.2 million of amortization related to an increase in our software costs for the year ended December 31, 2014, and \$6.0 million of depreciation from higher fixed asset expenditures for the same period, including the Arsenal on the Charles which was acquired during the three months ended June 30, 2013.

Interest Expense. Interest expense increased for the year ended December 31, 2014 due to a full 12 months of interest expense in 2014 for our newest debt agreement that was signed in May 2013.

	Year Ended December 31,		Change	
	2014	2013	Amount	Percent
	(in thousands)			
Income tax benefit	\$745	\$363	\$382	105%
Effective tax rate	19	% (16)%	

Income Tax Benefit (Provision). The difference in our effective tax rate for the year ended December 31, 2014, compared to the year ended December 31, 2013, is primarily due to a decrease in permanent differences related to non-deductible transaction costs associated with the Epocrates transaction in 2013 and our decrease in earnings before taxes.

Liquidity and Capital Resources

Sources of Liquidity

As of December 31, 2015, our principal sources of liquidity consisted of cash and cash equivalents of \$141.9 million compared to cash, cash equivalents, and marketable securities of \$114.7 million as of December 31, 2014. As of December 31, 2015, we have outstanding indebtedness of \$300.0 million compared to \$208.8 million as of December 31, 2014.

On May 10, 2013, we entered into the 2013 Credit Agreement that provided for a five-year \$325.0 million senior credit facility consisting of a \$200.0 million unsecured term loan facility and a \$125.0 million unsecured revolving credit facility.

On May 5, 2015, we entered into the 2015 Credit Agreement, which amended and restated the 2013 Credit Agreement, and provides for the 2015 Senior Credit Facility, consisting of a \$300.0 million unsecured term loan facility and a \$200.0 million unsecured revolving credit facility. A portion of the proceeds received from the 2015 Senior Credit Facility were used to repay the outstanding revolving loans under the 2013 Credit Agreement such that there were no revolving loans outstanding on the closing of the 2015 Credit Agreement.

The 2015 Credit Agreement may be used to refinance existing indebtedness, including indebtedness under the 2013 Credit Agreement, and for working capital and other general corporate purposes. We may increase the revolving credit facility up to an additional \$100.0 million and may increase the term loan facility to the extent that such amount will not cause us to be in breach of our financial covenants (such as compliance with a consolidated fixed charge coverage ratio, consolidated leverage ratio, and consolidated senior leverage ratio), subject to certain conditions, including obtaining lender commitments. The 2015 Senior Credit Facility matures on May 5, 2020. As of December 31, 2015, we had \$300.0 million outstanding on the unsecured

Table of Contents

term loan facility and we had nothing drawn on the unsecured revolving credit facility. As of December 31, 2015, we had \$200.0 million available on the unsecured revolving credit facility. As of December 31, 2015, we were in compliance with our covenants under the 2015 Credit Agreement.

We believe our current sources of liquidity will be sufficient to sustain operations, to make payments on our contractual obligations, and to purchase property and equipment in the foreseeable future. In addition, our 2015 Senior Credit Facility will provide flexibility to pursue strategic initiatives in the future, if needed. Our analysis is supported by the growth in our new client base and a high rate of renewal with our existing clients, as well as the corresponding increase in billings and collections. There can be no assurance that we will continue to generate cash flows at or above current levels or that we will be able to maintain our ability to borrow under these credit facilities or obtain additional financing.

Commitments

We enter into various purchase commitments with vendors in the normal course of business. We believe that our existing sources of liquidity will be adequate to fund these purchases during the 2015 fiscal year. In the normal course of business, we make representations and warranties that guarantee the performance of services under service arrangements with clients. Historically, there have been no material losses related to such guarantees.

Comparison of the Years Ended December 31, 2015 and 2014

Operating Cash Flow Activities

Net income after non-cash and reclassification adjustments contributed an additional \$21.9 million to cash provided by operating activities during the year ended December 31, 2015 compared to the year ended December 31, 2014. The non-cash adjustments were driven by an increase in depreciation and amortization of \$24.2 million related to our growth, which was offset by \$28.7 million in gains from the sales of Castlight stock. Additionally, there was a decrease in cash provided by working capital of \$7.2 million in the year ended December 31, 2015 compared to the year ended December 31, 2014, which was primarily driven by the bonus accrual related to headcount growth.

Investing Cash Flow Activities

Net cash used in investing activities increased \$71.8 million for the year ended December 31, 2015, compared to the year ended December 31, 2014, primarily due to our acquisition of RazorInsights for \$39.9 million, net of cash acquired, which is included in the payments for acquisitions line, and an increase of \$44.3 million in capitalized software costs, which includes our purchase of webOMR for \$22.0 million. We expect to continue to increase our investment in capitalized software costs as we develop new and enhance existing services. Note that in 2015 we had cash spend of \$97.8 million related to capitalized software. The cash spend consisted of \$84.4 million related to internally-developed software, including the \$22.0 million webOMR asset acquisition, while the remaining \$13.3 million related to acquired software licenses.

We increased our investments in property and equipment in 2015 by \$11.1 million, primarily related to investments in computer equipment to support our data centers and continued improvements to our owned properties, as well as expansion in our leased facilities.

Net cash used in investing activities was offset by \$29.8 million of cash provided from the sales of Castlight stock.

Financing Cash Flow Activities

Net cash provided by (used in) financing activities increased \$116.6 million for the year ended December 31, 2015 compared to the year ended December 31, 2014, primarily due to \$106.3 million of net proceeds received from the 2015 Senior Credit Facility.

For the foreseeable future, we anticipate that income taxes paid for the net settlement of restricted stock unit awards will be greater than the cash received for stock option exercises due to the stock price and the increase in the issuance of restricted stock units compared to stock options.

Comparison of the Years Ended December 31, 2014 and 2013

Operating Cash Flow Activities

The increase in cash flow provided by operating activities is mainly attributable to an increase in net income after non-cash adjustments due to our growth in operations. The non-cash adjustments include an increase in depreciation and amortization expense of \$32.0 million resulting from the acquisitions of Epocrates and the Arsenal on the Charles.

Table of Contents

The increase in cash provided by changes in operating assets and liabilities is due in part to an \$26.3 million increase in accrued compensation due to our headcount growth. Further, the purchase of the Arsenal on the Charles, which we previously leased, and our recent execution of new leases which include free rent and other leasehold incentives, provided an additional increase of \$12.1 million. These increases in cash were offset by an increase in accounts receivable due to our growth, which decreased cash provided by operating activities by \$34.4 million in the period.

Investing Cash Flow Activities

Net cash used in investing activities decreased \$297.6 million to \$127.3 million for the year ended December 31, 2014, as compared to the year ended December 31, 2013. In the prior year, our spend included cash paid for the acquisitions of Epocrates and the Arsenal on the Charles of \$410.2 million, net of cash acquired, which was offset by \$56.2 million of proceeds from the sales and maturities of investments.

We have increased our investments in property and equipment in 2014 by \$76.1 million. In conjunction with our 2013 purchase of the Arsenal on the Charles, our Board of Directors approved a plan to improve the campus for our employees and to open the space to local residents. We began to recognize costs associated with this plan in 2014 and expect these investments to increase in the foreseeable future to support our continued growth and new service offerings. Additional capital expenditures also relate to expansion in four of our office locations during 2014.

We have increased our investment in software costs in 2014 by \$53.5 million, and we expect investments to continue to increase as we develop and enhance new and existing services.

Financing Cash Flow Activities

Net cash (used in) provided by financing activities decreased \$254.5 million for the year ended December 31, 2014, compared to the year ended December 31, 2013, primarily due to the receipt of \$200.0 million in proceeds from our term loan and \$35.0 million in net proceeds from our line of credit during the year ended December 31, 2013, which we utilized in our acquisitions of Epocrates and the Arsenal on the Charles in the prior year. For the foreseeable future, we anticipate that income taxes paid for the net settlement of stock unit awards will be greater than the cash received for stock option exercises because of the recent increase in our stock price and the increase in the issuance of restricted stock units compared to stock options.

Contractual Obligations

The following table summarizes our long-term contractual obligations and commitments as of December 31, 2015:

(in thousands)	Payments Due by Period					
	Total	Less than 1 Year	1 - 3 Years	3 - 5 Years	5 More than Years	Other
Long-term debt ⁽¹⁾	\$300,000	11,250	35,625	253,125	—	—
Operating lease obligations ⁽²⁾	153,648	13,524	27,941	25,850	86,333	—
Purchase obligations	7,049	4,263	2,786	—	—	—
Other ⁽³⁾	3,413	—	—	—	—	3,413
Total	\$464,110	\$29,037	\$66,352	\$278,975	\$86,333	\$3,413

⁽¹⁾ We have cash interest requirements due on the 2015 Senior Credit Facility payable at variable rates which are not included in the above table.

⁽²⁾ We are party to agreements for non-cancelable operating leases for office space and data centers which expire between 2016 and 2030.

⁽³⁾ “Other” consists of uncertain tax benefits. We have not recognized these uncertain tax benefits, nor do we have an expectation of when these uncertain tax benefits would be challenged. As of December 31, 2015, we cannot reasonably estimate when any future cash outlays would occur related to these uncertain tax positions.

Off-Balance Sheet Arrangements

As of December 31, 2015 and 2014, we did not have any relationships with unconsolidated entities or financial partnerships, such as entities often referred to as “structured finance” or “special purpose” entities, which would have been established for the purpose of facilitating off-balance sheet arrangements or other contractually narrow or limited purposes. Other than our operating leases, which are primarily for office space and data centers, we do not engage in off-balance sheet financing arrangements.

Table of Contents

Item 7A. Quantitative and Qualitative Disclosures About Market Risk.

Foreign Currency Exchange Risk. Our results of operations and cash flows are subject to fluctuations due to changes in the Indian rupee. An insignificant amount of our consolidated revenues are generated outside of the United States. None of our vendor relationships, including our contracts with our offshore service providers for work performed in India and the Philippines, is denominated in any currency other than the U.S. dollar. For the years ended December 31, 2015, 2014, and 2013, approximately 1% of our expenses occurred in our direct subsidiary in Chennai, India, and were incurred in Indian rupees. We therefore believe that the risk of a significant impact on our operating income from foreign currency fluctuations is not likely.

Interest Rate Risk. We had \$300.0 million of outstanding borrowings under our 2015 Senior Credit Facility at December 31, 2015. The 2015 Senior Credit Facility bears interest at the British Bankers Association London Interbank Offered Rate (“LIBOR”) plus an interest margin based on (i) our consolidated leverage ratio, or (ii) the base rate (which is the highest of (a) the Bank of America prime rate, (b) the Federal Funds rate plus 0.50%, and (c) one month LIBOR plus 1.00%) plus an interest margin based on our consolidated leverage ratio. Accordingly, we are exposed to fluctuations in interest rates on borrowings under the 2015 Senior Credit Facility. A one hundred basis point change in the interest rate on our borrowings outstanding as of December 31, 2015 would result in a change in interest expense of approximately \$1.8 million annually.

During the year ended December 31, 2015, we utilized an interest rate swap to manage exposure to interest rates on the variable rate of our indebtedness. Our interest rate swap is with a major financial institution and is not used for speculative or trading purposes. We have designated our interest rate swap as a cash flow hedge and changes in the fair value of the interest rate swap are recognized in other comprehensive (loss) income. Hedge ineffectiveness, if any, associated with the interest rate swap will be reported in interest expense. We recorded the interest rate swap at fair value, which amounted to a liability of \$0.2 million at both December 31, 2015 and December 31, 2014.

Item 8. Financial Statements and Supplementary Data.

The financial statements required by this Item are located beginning on page F-1 of this report.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.

None.

Item 9A. Controls and Procedures.

Evaluation of Disclosure Controls and Procedures

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed in the reports that we file or submit under the Securities and Exchange Act of 1934 is (1) recorded, processed, summarized, and reported within the time periods specified in the Securities and Exchange Commission’s rules and forms and (2) accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial and Administrative Officer, to allow timely decisions regarding required disclosure. As of December 31, 2015 (the “Evaluation Date”), our management, with the participation of our Chief Executive Officer and Chief Financial and Administrative Officer, evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities and Exchange Act of 1934). Our management recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving their objectives, and management necessarily applies its judgment in evaluating the cost-benefit relationship of possible controls and procedures. Our Chief Executive Officer and Chief Financial and Administrative Officer have concluded based upon the evaluation described above that, as of the Evaluation Date, our disclosure controls and procedures were effective at the reasonable assurance level.

Management’s Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting for our company. Internal control over financial reporting is defined in Rules 13a-15(f) and 15(d)-15(f) promulgated under the Securities Exchange Act of 1934, as amended, as a process designed by, or under the supervision of, our Chief Executive and Chief Financial and Administrative Officers and effected by our board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and disposition of our assets;

56

Table of Contents

- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles;
- provide reasonable assurance that our receipts and expenditures are being made only in accordance with authorization of our management and directors; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of our assets that could have a material effect on the financial statements.

Because of inherent limitations, internal controls over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are subject to the risks that controls may become inadequate because of changes in conditions or that the degree of compliance with the policies or procedures may deteriorate.

Our management, including our Chief Executive Officer and Chief Financial and Administrative Officer, has conducted an evaluation of the effectiveness of our internal control over financial reporting as of December 31, 2015. In conducting this evaluation, we used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (“COSO”), in Internal Control-Integrated Framework (2013).

Based upon this evaluation and those criteria, management believes that, as of December 31, 2015, our internal controls over financial reporting were effective.

Deloitte and Touche LLP, our independent registered public accounting firm, has audited our consolidated financial statements and the effectiveness of our internal control over financial reporting as of December 31, 2015.

Changes in Internal Control

There have been no changes in our internal control over financial reporting for the three months ended December 31, 2015 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of athenahealth, Inc.
Watertown, Massachusetts

We have audited the internal control over financial reporting of athenahealth, Inc. and subsidiaries (the “Company”) as of December 31, 2015, based on criteria established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company’s management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management’s Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company’s internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company’s internal control over financial reporting is a process designed by, or under the supervision of, the company’s principal executive and principal financial officers, or persons performing similar functions, and effected by the company’s board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company’s internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company’s assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2015, based on the criteria established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements as of and for the year ended December 31, 2015 of the Company and our report dated February 4, 2016 expressed an unqualified opinion on those financial statements.

PART III

Certain information required by Part III of Form 10-K is omitted from this report because we expect to file a definitive proxy statement for our 2016 Annual Meeting of Shareholders (“2016 Proxy Statement”) within 120 days after the end of our fiscal year pursuant to Regulation 14A promulgated under the Securities Exchange Act of 1934, as amended, and the information included in our 2016 Proxy Statement is incorporated herein by reference to the extent provided below.

Item 10. Directors, Executive Officers and Corporate Governance.

The information required by this Item is incorporated by reference to the information to be contained in our 2016 Proxy Statement.

We have adopted a code of ethics that applies to all of our directors, officers, and employees. This code is publicly available on our website at www.athenahealth.com. Amendments to the code of ethics or any grant of a waiver from a provision of the code requiring disclosure under applicable SEC and NASDAQ Global Select Market rules will be disclosed on our website or, if so required, disclosed in a Current Report on Form 8-K.

Item 11. Executive Compensation.

The information required by this Item is incorporated by reference to the information to be contained in our 2016 Proxy Statement.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.

The information required by this Item is incorporated by reference to the information to be contained in our 2016 Proxy Statement.

Item 13. Certain Relationships and Related Transactions, and Director Independence.

The information required by this Item is incorporated by reference to the information to be contained in our 2016 Proxy Statement.

Item 14. Principal Accountant Fees.

The information required by this Item is incorporated by reference to the information to be contained in our 2016 Proxy Statement.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
athenahealth, Inc.

Watertown, Massachusetts

We have audited the accompanying consolidated balance sheets of athenahealth, Inc. and subsidiaries (the “Company”) as of December 31, 2015 and 2014, and the related consolidated statements of income, comprehensive income, stockholders’ equity, and cash flows for each of the three years in the period ended December 31, 2015. These financial statements are the responsibility of the Company’s management. Our responsibility is to express an opinion on the financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of athenahealth, Inc. and subsidiaries as of December 31, 2015 and 2014, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2015, in conformity with accounting principles generally accepted in the United States of America.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company’s internal control over financial reporting as of December 31, 2015, based on the criteria established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 4, 2016 expressed an unqualified opinion on the Company’s internal control over financial reporting.
