

APOLLO GOLD CORP
Form 10-K
March 31, 2006

UNITED STATES SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

Form 10-K

**R ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES
EXCHANGE ACT OF 1934**

For the fiscal year ended December 31, 2005

OR

**ø TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE
SECURITIES EXCHANGE ACT OF 1934**

For the transition period from ____ to ____

Commission File Number: 001-31593

Apollo Gold Corporation

(Exact name of registrant as specified in its charter)

Yukon Territory
*(State or other jurisdiction of
incorporation or organization)*

Not Applicable
*(I.R.S. Employer
Identification No.)*

5655 S. Yosemite Street, Suite 200
Greenwood Village, Colorado 80111-3220
(Address of Principal Executive Offices Including Zip Code)

(720) 886-9656
(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act:

Title of Each Class	Name of Each Exchange on Which Registered
Common Shares, no par value	American Stock Exchange Toronto Stock Exchange

Securities registered pursuant to Section 12 of the Act: Common Shares, no par value

Edgar Filing: APOLLO GOLD CORP - Form 10-K

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No R

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act.

Yes No R

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes R No

Indicate by a check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. R

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act (Check one):

Large accelerated filer

Accelerated filer

Non-accelerated filer R

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No R

As of June 30, 2005, the approximate aggregate market value of voting stock held by non-affiliates of the registrant was \$31,424,977 million (based upon the closing price for shares of the registrant's common shares as reported by the American Stock Exchange on that date).

As of March 24, 2006, the registrant had 121,396,859 common shares, no par value per share, outstanding.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of our Definitive Proxy Statement to be filed with the Securities and Exchange Commission pursuant to Regulation 14A in connection with the 2006 Annual Meeting of Shareholders are incorporated by reference to Part III of this Annual Report on Form 10-K.

REPORTING CURRENCY, FINANCIAL AND OTHER INFORMATION

All amounts in this Report are expressed in United States (“U.S.”) dollars. Unless otherwise indicated Canadian currency is denoted as “Cdn\$.”

Financial information is presented in accordance with generally accepted accounting principles (“GAAP”) in Canada (“Cdn GAAP”). Differences between accounting principles generally accepted in the U.S. (“U.S. GAAP”) and those applied in Canada, as applicable to Apollo Gold Corporation, are discussed in Note 20 to the Consolidated Financial Statements.

Information in Part I and II of this report includes data expressed in various measurement units and contains numerous technical terms used in the gold mining industry. To assist readers in understanding this information, a conversion table and glossary are provided below.

References to “Apollo,” the “Company,” “we,” “our,” or “us” mean Apollo Gold Corporation, its predecessors and consolidated subsidiaries, or any one or more of them, as the context requires.

NON-GAAP FINANCIAL MEASURES

In this Annual Report on Form 10-K, we use the terms “cash operating costs,” “total cash costs,” and “total production costs,” each of which are considered non-GAAP financial measures as defined in the United States Securities and Exchange Commission (the “SEC”) Regulation S-K Item 10 and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP. These terms are used by management to assess performance of individual operations and to compare our performance to other gold producers.

The term “cash operating costs” is used on a per ounce of gold basis. Cash operating costs per ounce is equivalent to direct operating cost as found on the Consolidated Statements of Operations, less production royalty expenses and mining taxes but includes by-product credits for payable silver, lead and zinc.

The term “total cash costs” is equivalent to cash operating costs plus production royalties and mining taxes.

The term “total production costs” is equivalent to total cash costs plus non-cash costs including depreciation and amortization.

These measures are not necessarily indicative of operating profit or cash flow from operations as determined under GAAP and may not be comparable to similarly titled measures of other companies. See Item 7, Management’s Discussion and Analysis of Financial Condition and Results of Operations for a reconciliation of these non-GAAP measures to our Statements of Operations.

STATEMENTS REGARDING FORWARD-LOOKING INFORMATION

This Annual Report on Form 10-K contains forward-looking statements, as defined in the Private Securities Litigation Reform Act of 1995, with respect to our financial condition, results of operations, business prospects, plans, objectives, goals, strategies, future events, capital expenditure, and exploration and development efforts. Words such as “anticipates,” “expects,” “intends,” and similar expressions identify forward-looking statements. These statements include comments regarding:

- Company's future focus on Black Fox;
- the establishment and estimates of mineral reserves and resources;
- production;
- production commencement dates;
- total production costs;
- cash operating costs;
- total cash costs;
- grade;
- processing capacity;
- potential mine life;
- feasibility studies;
- publication of reserves and an NI 43-101 report and any results therefrom;
- development costs;
- expenditures;
- exploration;
- permits;
- expansion plans;
- plans for Black Fox and Huizopa;
- closure costs;
- remediation costs for Montana Tunnels;
- sale of and continued milling at Montana Tunnels;
- WARN Act notice and timing of layoff;
- development drilling and its potential results;
- surveys of claims;
- recovery rates;

- geological prospects;
- impact of governmental laws;
- nonpayment of dividends and use of earnings from operations;
- delivery of metals;
- hedging contracts;
- cash flows;
- future financing;
- liquidity;
- our ability to fund our estimated expenditure and capital requirements;
- estimated environmental liabilities;

- factors impacting our results of operations;
- application of Sarbanes Oxley 404 reporting requirements and our ability to meet those reporting requirements; and
- the impact of adoption of new accounting standards.

Although we believe that our plans, intentions and expectations reflected in these forward-looking statements are reasonable, we cannot be certain that these plans, intentions or expectations will be achieved. Our actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth below and other factors described in more detail in this Annual Report on Form 10-K:

- unexpected changes in business and economic conditions;
- significant increases or decreases in gold prices;
- changes in interest and currency exchange rates;
- timing and amount of production;
- unanticipated grade changes;
- unanticipated recovery or production problems;
- changes in mining and milling costs;
- operational problems at our mining property;
- metallurgy, processing, access, availability of materials, equipment, supplies and water;
- determination of reserves;
- changes in project parameters;
- costs and timing of development of new reserves;
- results of current and future exploration activities;
- results of pending and future feasibility studies;
- joint venture relationships;
- ability to sell our mining property or its assets;
- political or economic instability, either globally or in the countries in which we operate;
- local and community impacts and issues;
- timing of receipt of government approvals;

- accidents and labor disputes;
- environmental costs and risks;
- competitive factors, including competition for property acquisitions;
- availability of external financing at reasonable rates or at all; and

- 5 -

· the factors discussed in this Annual Report on Form 10-K under the heading “Risk Factors.”

Many of these factors are beyond our ability to control or predict. These factors are not intended to represent a complete list of the general or specific factors that may affect us. We may note additional factors elsewhere in this Annual Report on Form 10-K and in any documents incorporated by reference into this Annual Report on Form 10-K. We undertake no obligation to update forward-looking statements.

GLOSSARY OF TERMS

We report our reserves on two separate standards to meet the requirements for reporting in both Canada and the United States (“U.S.”). Canadian reporting requirements for disclosure of mineral properties are governed by National Instrument 43-101 (“NI 43-101”). The definitions given in NI 43-101 are adopted from those given by the Canadian Institute of Mining Metallurgy and Petroleum. U.S. reporting requirements for disclosure of mineral properties are governing by SEC Industry Guide 7. These reporting standards have similar goals in terms of conveying an appropriate level of confidence in the disclosures being reported, but embody differing approaches and definitions.

We estimate and report our resources and reserves according to the definitions set forth in NI 43-101 and modify and reconcile them as appropriate to conform to SEC Industry Guide 7 for reporting in the U.S. The definitions for each reporting standard are presented below with supplementary explanation and descriptions of the parallels and differences.

NI 43-101 Definitions

indicated mineral resource

The term “indicated mineral resource” refers to that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics can be established with a level of confidence sufficient to allow the appropriate application of technical and economic parameters, to support mine planning and evaluation of the economic viability of the deposit. The estimate is based on detailed and reliable exploration and testing information gathered through appropriate techniques from locations such as outcrops, trenches pits, workings and drill holes that are spaced closely enough for geological and grade continuity to be reasonably assumed.

inferred mineral resource

The term “inferred mineral resource” refers to that part of a mineral resource for which quantity and grade or quality can be estimated on the basis of geological evidence and limited sampling and reasonably assumed, but not verified, geological and grade continuity. The estimate is based on limited information and sampling gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes.

measured mineral resource	The term “measured mineral resource” refers to a part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics are so well established that they can be estimated with confidence sufficient to allow the appropriate application of technical and economic parameters to support production planning and evaluation of the economic viability of the deposit. The estimate is based on detailed and reliable exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes that are spaced closely enough to confirm both geological and grade continuity..
mineral reserve	The term “mineral reserve” refers to the economically mineable part of a measured or indicated mineral resource demonstrated by at least a preliminary feasibility study. The study must include adequate information on mining, processing, metallurgical, economic, and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified. A mineral reserve includes diluting materials and allowances for losses that might occur when the material is mined.
mineral resource	The term “mineral resource” refers to a concentration or occurrence of natural, solid, inorganic or fossilized organic material in or on the Earth’s crust in such form and quantity and of such a grade or quality that it has reasonable prospects for economic extraction. The location, quantity, grade, geological characteristics and continuity of a mineral resource are known, estimated or interpreted from specific geological evidence and knowledge.
probable mineral reserve	The term “probable mineral reserve” refers to the economically mineable part of an indicated, and in some circumstances a measured mineral resource demonstrated by at least a preliminary feasibility study. This study must include adequate information on mining, processing, metallurgical, economic, can other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified.
proven mineral reserve¹	The term “proven mineral reserve” refers to the economically mineable part of a measured mineral resource demonstrated by at least a preliminary feasibility study.
qualified person²	The term “qualified person” refers to an individual who is an engineer or geoscientist with at least five years of experience in mineral exploration, mine development, production activities and project assessment, or any combination thereof, including experience relevant to the subject matter of the project or report and is a member in good standing of a self-regulating organization.

SEC Industry Guide 7 Definitions

exploration stage	An “exploration stage” prospect is one which is not in either the development or production stage.
development stage	A “development stage” project is one which is undergoing preparation of an established commercially mineable deposit for its extraction but which is not yet in production. This stage occurs after completion of a feasibility study.
mineralized material³	The term “mineralized material” refers to material that is not included in the reserve as it does not meet all of the criteria for adequate demonstration for economic or legal extraction.
probable reserve	The term “probable reserve” refers to reserves for which quantity and grade and/or quality are computed from information similar to that used for proven (measured) reserves, but the sites for inspection, sampling, and measurement are farther apart or are otherwise less adequately spaced. The degree of assurance, although lower than that for proven reserves, is high enough to assume continuity between points of observation.
production stage	A “production stage” project is actively engaged in the process of extraction and beneficiation of mineral reserves to produce a marketable metal or mineral product.
proven reserve	The term “proven reserve” refers to reserves for which (a) quantity is computed from dimensions revealed in outcrops, trenches, workings or drill holes; grade and/or quality are computed from the results of detailed sampling and (b) the sites for inspection, sampling and measurement are spaced so closely and the geologic character is so well defined that size, shape, depth and mineral content of reserves are well-established.
reserve	The term “reserve” refers to that part of a mineral deposit which could be economically and legally extracted or produced at the time of the reserve determination. Reserves must be supported by a feasibility study done to bankable standards that demonstrates the economic extraction. (“Bankable standards” implies that the confidence attached to the costs and achievements developed in the study is sufficient for the project to be eligible for external debt financing.) A reserve includes adjustments to the in-situ tonnes and grade to include diluting materials and allowances for losses that might occur when the material is mined.

¹For Industry Guide 7 purposes this study must include adequate information on mining, processing, metallurgical, economic, and other relevant factors that demonstrate, at the time of reporting, that economic extraction is justified.

² Industry Guide 7 does not require designation of a qualified person.

³ This category is substantially equivalent to the combined categories of measured and indicated mineral resources specified in NI 43-101.

Additional Definitions

breccia	rock consisting of angular fragments of other rocks held together by mineral cement or a fine-grained matrix
call	a financial instrument that provides the right, but not the obligation, to buy a specified number of ounces of gold at a specified price
clasts	fragments of a pre-existing rock or fossil embedded within another rock
concentrate	a processing product containing the valuable ore mineral from which most of the waste mineral has been eliminated
cretaceous	the third and latest of the periods in the Mesozoic era
cut-off grade	when determining economically viable mineral reserves, the lowest grade of mineralized material that qualifies as ore, i.e. that can be mined at a profit
diatreme	an upward sloping passage forced through sedimentary rock by volcanic activity
doré	unrefined gold bullion bars containing various impurities such as silver, copper and mercury, which will be further refined to near pure gold
fault	a rock fracture along which there has been displacement
feasibility study	a definitive engineering and economic study addressing the viability of a mineral deposit taking into consideration all associated technical factors, costs, revenues, and risks
fold	a curve or bend of a planar structure such as rock strata, bedding planes, foliation, or cleavage
footwall	a geologic or mining term meaning the rock below a fault or vein, or underlying a natural feature, or the mining floor
formation	a distinct layer of sedimentary rock of similar composition
geochemistry	the study of the distribution and amounts of the chemical elements in minerals, ores, rocks, solids, water, and the atmosphere
geophysicist	one who studies the earth; in particular the physics of the solid earth, the atmosphere and the earth's magnetosphere
geotechnical	the study of ground stability

grade	quantity of metal per unit weight of host rock
hanging wall	a geologic or mining term meaning the rock above a fault or vein, or overlying a natural feature (as opposed to a footwall)
heap leach	a mineral processing method involving the crushing and stacking of ore on an impermeable liner upon which solutions are sprayed to dissolve metals such as gold and copper; the solutions containing the metals are then collected and treated to recover the metals
heterolithic	having more than one, differing kinds of rock components
host rock	the rock containing a mineral or an ore body

hydrothermal	the products of the actions of heated water, such as a mineral deposit precipitated from a hot solution
induced polarization	a method of conducting geophysics and locating drilling targets
intercalated	said of layered material that exists or is introduced between layers of a different character
latitic composition	igneous rock composed largely of equal amounts of orthoclase and plagioclase feldspar minerals and less than 10% quartz
mafic	pertaining to or composed dominantly of the ferromagnesian rock-forming silicates; said of some igneous rocks and their constituent minerals
mapped or geological mapping	the recording of geologic information such as the distribution and nature of rock units and the occurrence of structural features, mineral deposits, and fossil localities
mineral	a naturally formed chemical element or compound having a definite chemical composition and, usually, a characteristic crystal form
mineralogy	the science of minerals
mineralization	a natural occurrence in rocks or soil of one or more metal yielding minerals
mining	the process of extraction and beneficiation of mineral reserves to produce a marketable metal or mineral product. Exploration continues during the mining process and, in many cases, mineral reserves are expanded during the life of the mine operations as the exploration potential of the deposit is realized.
National Instrument 43-101	Canadian standards of disclosure for mineral projects
open pit	surface mining in which the ore is extracted from a pit or quarry, the geometry of the pit may vary with the characteristics of the ore body
ore	mineral bearing rock that can be mined and treated profitably under current or immediately foreseeable economic conditions
ore body	a mostly solid and fairly continuous mass of mineralization estimated to be economically mineable
outcrop	that part of a geologic formation or structure that appears at the surface of the earth
petrographic	the systematic classification and description of rocks, especially by microscopic examinations of thin sections

pluton

a body of igneous rock that has formed beneath the surface of the earth by consolidation from magma

- 10 -

put	a financial instrument that provides the right, but not the obligation, to sell a specified number of ounces of gold at a specified price
pyrite	common sulfide of iron
quartz	a mineral composed of silicon dioxide, SiO ₂ (silica)
quartz monzonite	a coarse-grained igneous rock made up principally of feldspar minerals and quartz
reclamation	the process by which lands disturbed as a result of mining activity are modified to support beneficial land use. Reclamation activity may include the removal of buildings, equipment, machinery and other physical remnants of mining, closure of tailings storage facilities, leach pads and other mine features, and contouring, covering and re-vegetation of waste rock and other disturbed areas.
reclamation and closure costs	the cost of reclamation plus other costs, including without limitation certain personnel costs, insurance, property holding costs such as taxes, rental and claim fees, and community programs associated with closing an operating mine
recovery rate	a term used in process metallurgy to indicate the proportion of valuable material physically recovered in the processing of ore, generally stated as a percentage of the material recovered compared to the total material originally present
SAG	semi-autogenous grinding, a method of grinding rock into fine particles, in which the grinding media consists of steel balls
SEC Industry Guide 7	U.S. reporting guidelines that apply to registrants engaged or to be engaged in significant mining operations
sedimentary rock	rock formed at the earth's surface from solid particles, whether mineral or organic, which have been moved from their position of origin and redeposited
shear	a form of strain resulting from stresses that cause or tend to cause contiguous parts of a body of rock to slide relatively to each other in a direction parallel to their plane of contact
skarn	a rock of complex mineral composition
stratigraphy	the branch of geology which studies the formation, composition, sequence and correlation of the stratified rock as parts of the earth's crust
strike	the direction or trend that a structural surface, e.g. a bedding or fault plane, takes as it intersects the horizontal

strip

to remove overburden in order to expose ore

subangular

somewhat angular, free from sharp angles but not smoothly rounded

- 11 -

sulfide	a mineral including sulfur (S) and iron (Fe) as well as other elements; metallic sulfur-bearing mineral often associated with gold mineralization
variogram	graphical representation of the rate of change of grade with distance which is used to define parameters for controlling sample layout and resource modeling
vein	a thin, sheet like crosscutting body of hydrothermal mineralization, principally quartz
volcaniclastics	volcanic rocks containing significant amounts of rock fragments that have been moved from their place of origin during volcanic activity
volcanic rock	originally molten rocks, generally fine grained, that have reached or nearly reached the earth's surface before solidifying
wall rock	the rock adjacent to a vein

CONVERSION FACTORS AND ABBREVIATIONS

For ease of reference, the following conversion factors are provided:

1 acre	= 0.4047 hectare	1 mile	= 1.6093 kilometers
1 foot	= 0.3048 meter	1 troy ounce	= 31.1035 grams
1 gram per metric tonne	= 0.0292 troy ounce/short ton	1 square mile	= 2.59 square kilometers
1 short ton (2000 pounds)	= 0.9072 tonne	1 square kilometer	= 100 hectares
1 tonne	= 1,000 kg or 2,204.6 lbs	1 kilogram	= 2.204 pounds or 32.151 troy oz
1 hectare	= 10,000 square meters	1 hectare	= 2.471 acres

The following abbreviations could be used herein:

Au	= gold	m(2)	= square meter
g	= gram	m(3)	= cubic meter
Au g/t	= grams of gold per tonne	Mg or mg	= milligram
ha	= hectare	mg/m(3)	= milligrams per cubic meter
km	= kilometer	T	= tonnes
km(2)	= square kilometers	t	= ton
kg	= kilogram	Oz	= troy ounce
lb	= pound	Ppb	= parts per billion
m	= meter	Ma	= million years

Note: All units in this report are stated in metric measurements unless otherwise noted.

PART I

ITEM 1. DESCRIPTION OF BUSINESS

OVERVIEW OF APOLLO GOLD

The earliest predecessor to Apollo Gold Corporation was incorporated under the laws of the Province of Ontario in 1936. In May 2003, it reincorporated under the laws of the Yukon Territory. Apollo Gold Corporation maintains its registered office at 204 Black Street, Suite 300, Whitehorse, Yukon Territory, Canada Y1A 2M9, and the telephone number at that office is (867) 668-5252. Apollo Gold Corporation maintains its principal executive office at 5655 S. Yosemite Street, Suite 200, Greenwood Village, Colorado 80111-3220, and the telephone number at that office is (720) 886-9656. Our internet address is <http://www.apollogold.com>. Information contained on our website is not a part of this Annual Report on Form 10-K.

Apollo is engaged in gold mining including extraction, processing, refining and the production of by-product metals, as well as related activities including exploration and development. The Company owns and operates the Montana Tunnels mine, an open pit mine and mill currently producing gold doré and lead-gold and zinc-gold concentrates from stockpiled, low grade ore. See Item 2 “Description of Properties” for further information. In March 2006, the Company adopted a plan to dispose of Montana Tunnels Mining, Inc., the company which operates the Montana Tunnels mine.

On November 18, 2005, Apollo sold Florida Canyon Mining, Inc., Standard Gold Mining, Inc. and Apollo Gold Exploration, Inc. (collectively, the “Nevada Assets”) to a wholly owned subsidiary of Jipangu, Inc., for \$14 million. See Item 7 “Management’s Discussion and Analysis of Financial Condition and Results of Operations” for further information.

With the plan of disposal of the Montana Tunnels mine, Apollo's future focus is on its development property, the Black Fox project, which is located near the Township of Matheson in the Province of Ontario, Canada. Apollo also owns Mexican subsidiaries which own or have the right to acquire concessions at the Huizopa exploration project, located in the Sierra Madre gold belt in Chihuahua, Mexico.

BACKGROUND

Apollo Gold Corporation

The following chart illustrates the operations and principal operating subsidiaries and their jurisdictions of incorporation. Apollo owns 100% of the voting securities of each subsidiary.

APOLLO GOLD GROUP
(as of March 24, 2006)

APOLLO GOLD CORPORATION: American Stock Exchange and Toronto Stock Exchange listed holding company which owns and operates the Black Fox development property.

APOLLO GOLD, INC.: Holding company, employs executive officers and furnishes corporate services to Apollo Gold Corporation and its subsidiaries.

MINERA SOL DE ORO S.A. de C.V.: Holds rights to the Huizopa exploration property.

MONTANA TUNNELS MINING, INC.: Owns and operates the Montana Tunnels mine and owns the Diamond Hill mine.

MINE DEVELOPMENT FINANCE INC.: Provides intercompany loans and other financial services to affiliated companies.

MINAS de ARGONAUTAS, S. de R.L de C.V.: Conducts exploration at the Huizopa exploration property in Mexico.

Financial Information

Segmented information is contained in note 19 of the “Notes to the Consolidated Financial Statements” contained within this Annual Report on Form 10-K.

Products

The Montana Tunnels mine produces gold, zinc, silver, and lead in gold doré and lead-gold and zinc-gold concentrates. The metals produced are sold to custom smelters, refiners and metals traders. The percentage of sales contributed by each class of product is reflected in the following table.

Product Category	Year Ended December 31,		
	2005	2004	2003
Gold	46%	37%	55%
Zinc	34%	34%	29%
Silver, lead and other metals	20%	29%	16%

The table below summarizes Montana Tunnels' metals production and average metals prices for the periods indicated.

Production Summary	Year Ended December 31,		
	2005	2004	2003
Gold ounces	44,099	33,743	44,124
Silver ounces	524,722	970,751	411,216
Lead pounds	10,428,061	10,064,265	10,843,184
Zinc pounds	22,380,136	26,222,805	21,792,452

Average metals prices

Gold - London Bullion Mkt. (\$/ounce)	\$	445	\$	409	\$	364
Silver - London Bullion Mkt. (\$/ounce)	\$	7.31	\$	6.66	\$	4.88
Lead - LME Cash (\$/pound)	\$	0.44	\$	0.40	\$	0.23
Zinc - LME Cash (\$/pound)	\$	0.63	\$	0.48	\$	0.38

Gold

Montana Tunnels produced 44,099, 33,743, and 44,124 ounces of gold during the years ended December 31, 2005, 2004, and 2003, respectively.

The majority of our gold revenue is derived from the sale of gold contained within the lead-gold and zinc-gold concentrates. See Item 2 "Description of Properties - Montana Tunnels Mine" for further information. The balance of the gold revenue is derived from the sale of refined gold in the form of doré bars. Because doré is an alloy consisting primarily of gold but also containing silver and other metals, bars are sent to refiners to produce bullion that meets the required market standard of 99.99% pure gold. Under the terms of our refining contracts, the bars are refined for a fee, and our share of the refined gold and the separately recovered silver is paid to us.

Gold Uses

Gold has two primary uses: product fabrication and bullion investment. Fabricated gold has a variety of end uses, including jewelry, electronics, dentistry, industrial and decorative uses, medals, medallions and official coins. Gold investors purchase gold bullion, official coins and high-carat jewelry.

Gold Supply

The worldwide supply of gold consists of a combination of new production from mining and existing stocks of bullion and fabricated gold held by governments, financial institutions, industrial organizations and private individuals.

Gold Price History

The price of gold is volatile and is affected by numerous factors beyond our control such as the sale or purchase of gold by various central banks and financial institutions, inflation or deflation, fluctuation in the value of the US dollar and foreign currencies, global and regional demand, and the political and economic conditions of major gold-producing countries throughout the world.

The following table presents the high, low and average afternoon fixing prices for gold per ounce on the London Bullion Market over the past ten years:

Year	High	Low	Average
1996	\$ 415	\$ 367	\$ 388
1997	362	283	331
1998	313	273	294
1999	326	253	279
2000	313	264	279
2001	293	256	271
2002	349	278	310
2003	416	320	364
2004	454	375	409
2005	537	411	445

Data Source: www.kitco.com

As of March 15, 2006, the high, low, and average afternoon fixing prices for gold per ounce on the London Bullion Market were \$572, \$525 and \$553 per ounce, respectively.

Zinc

Production from the Montana Tunnels mine also includes the extraction, processing and sale of zinc and lead contained in sulfide concentrates. The mine produced approximately 22,400,000, 26,200,000 and 21,800,000 pounds of payable zinc in 2005, 2004 and 2003, respectively.

Due to its corrosion resisting property, zinc is used primarily as the coating in galvanized steel. Galvanized steel is widely used in construction of infrastructure, housing and office buildings. In the automotive industry, zinc is used for galvanizing and die-casting and in the vulcanization of tires. Smaller quantities of various forms of zinc are used in the chemical and pharmaceutical industries, including fertilizers, food supplements and cosmetics, and in specialty electronic applications such as satellite receivers.

Annual Global Supply/ Demand Balance for Zinc, 2001-2005

Edgar Filing: APOLLO GOLD CORP - Form 10-K

	2005	2004	2003 (000 tonnes)	2002	2001

Zinc Price History

The following table sets forth for the periods indicated the London Metals Exchange high and low settlement prices of zinc in U.S. dollars per pound:

Year	Zinc	
	High	Low
2001	0.48	0.33
2002	0.42	0.33
2003	0.46	0.34
2004	0.56	0.42
2005	0.86	0.53
2006*	1.08	0.87

* Through March 15, 2006

Silver

Montana Tunnels produced 524,722, 970,751 and 411,216 ounces of silver in the years ended December 31, 2005, 2004 and 2003, respectively. The silver production is derived from the gold doré as well as the lead and zinc concentrates.

Silver has traditionally served as a medium of exchange, much like gold. While silver continues to be used for currency, the current principal uses of silver are for industrial uses, primarily for electrical and electronic components, photography, jewelry and silverware. Silver's strength, malleability, ductility, thermal and electrical conductivity, sensitivity to light and ability to endure extreme changes in temperature combine to make silver a widely used industrial metal. Specifically, it is used in photography, batteries, computer chips, electrical contacts, and high technology printing. Silver's anti-bacterial properties also make it valuable for use in medicine and in water purification.

Silver Price History

The following table sets forth for the periods indicated the London Metals Exchange high and low settlement prices of silver in U.S. dollars per ounce.

Year	Silver	
	High	Low
2001	4.83	4.03
2002	5.13	4.22
2003	5.99	4.35
2004	8.29	5.49
2005	9.22	6.39
2006*	10.26	8.83

* Through March 15, 2006

Lead

Production from Montana Tunnels also includes the extraction, processing and sale of lead contained in sulfide concentrates. Montana Tunnels produced approximately 10,400,000, 10,100,000 and 10,800,000 pounds of payable lead in 2005, 2004 and 2003, respectively.

The primary use of lead is in motor vehicle batteries, but it is also used in cable sheathing, solder in printed wiring circuits, shot for ammunition and alloying. Lead in chemical form is used in alloys, glass and plastics.

Lead Price History

The following table sets forth for the periods indicated the London Metals Exchange high and low settlement prices for lead in U.S. dollars per pound.

Year	Lead	
	High	Low
2001	0.24	0.20
2002	0.24	0.18
2003	0.34	0.19
2004	0.45	0.29
2005	0.49	0.41
2006*	0.66	0.50

* Through March 15, 2006

The price of silver, lead and zinc is affected by numerous factors that are beyond our control. See "Risk Factors."

Smelting and Refining Process

We have an agreement with Johnson Matthey to refine gold doré to a final finished product. Johnson Matthey receives \$0.50 for each ounce of gold doré it refines, in addition to receiving a fee of 0.5% of the payable metal for silver and 0.1% of the payable metal for gold, with a minimum charge of \$500 per delivery.

The lead and zinc concentrates are shipped by rail for smelting to Teck Cominco Metals Ltd. in Trail, British Columbia, Canada, approximately five hours from the Montana Tunnels mine. Our contract with Teck Cominco expires in March 2007. See Item 2 “Description of Properties - Montana Tunnels Mine” for further information.

- 18 -

2006 Operating Outlook

Following the sale in November 2005 to Jipangu Inc. of Apollo's Nevada Assets, we have three remaining properties: the Montana Tunnels mine, the Black Fox project and the Huizopa project. Below is a summary of our expectations for these three properties in 2006.

Montana Tunnels mine. Open pit mining activity was suspended on October 21, 2005. Currently the mill continues to operate, processing low grade stockpiled ore and is expected to continue milling through the end of April 2006. In March 2006, we adopted a plan to dispose of Montana Tunnels Mining, Inc., which owns the Montana Tunnels and Diamond Hill mines.

Black Fox project, a development property. The Company's focus is on developing our Black Fox project. We expect to publish updated reserves in April 2006 and issue an NI 43-101 report within 45 days of publishing the reserves. We expect that the NI 43-101 report will reflect an increase from the 2004 reserve numbers previously disclosed. We also expect to complete the feasibility study by the end of 2006. Estimated expenditures at Black Fox for 2006 are \$3.1 million. Additionally, we will continue to evaluate financing opportunities in order to extend the drilling program at Black Fox given that the mineralization is still open along strike and at depth.

Huizopa project, an exploration property. In 2006, we expect to continue mapping, trenching, sampling, and conducting geophysical studies on the property including the selection of several primary targets for drill sites and the commencement of a drilling program. The costs of the project is expected to be approximately \$2.3 million for the year 2006.

Development and Exploration.

During 2005, we drilled at Black Fox 160 underground holes totaling 34,456 meters plus 51 surface holes totaling 9,813 meters, bringing the total number of underground holes to 370 (75,521 meters) and surface holes to 449 (135,712 meters), giving a total number of holes of 819 (211,233 meters). Work continued throughout the year on progressing the permitting of a combined open pit and underground mine, with a 1,500 tonnes per day mill on site. The updated reserves are expected to be published in April 2006 followed by an NI 43-101 report. Completion of the feasibility study is currently scheduled for the end of 2006.

Mineral Reserves

Our proven and probable mineral reserves are estimated in conformance with definitions set out in NI 43-101 and on a basis consistent with the definition of proven and probable mineral reserves set forth in SEC Industry Guide 7. See our "Glossary of Terms."

The estimates of our mineral reserves are prepared by Apollo based on information compiled and/or validated by Mr. Richard F. Nanna, our employee and Senior Vice President of Exploration. Mr. Nanna is a qualified professional geologist with 32 years of experience and a registered Professional Geologist in the State of Washington. Mr. Nanna is considered a qualified person under NI 43-101.

Since we report our mineral reserves to both NI 43-101 and SEC Industry Guide 7 standards, it is possible for our reserve figure to vary between the two. Where such a variance occurs it will arise from the differing requirements for reporting mineral reserves. For example, the NI 43-101 has a minimum requirement that reserves be supported by a pre-feasibility study, whereas SEC Industry Guide 7 requires support from a full feasibility study done to bankable standards. The Black Fox project thus reports reserves under NI 43-101, but reports no reserves under SEC Industry Guide 7 as a final bankable feasibility study has not been completed. No reconciliation between NI 43-101 and SEC Industry Guide 7 is included for Montana Tunnels as there are no material differences.

The proven and probable mineral reserves as of December 31, 2005, for Montana Tunnels have been estimated at an economic cut-off grade based on a gold price of \$425 per ounce, and at a three-year rolling average gold price of \$406 per ounce.

The proven and probable mineral reserves estimates disclosed below for Black Fox were in an NI 43-101 report completed in March 2004 and were calculated based on a gold price of \$375 per ounce. At the present time, we expect to update the reserves in April 2006 and issue an NI 43-101 report within 45 days of publishing the reserves for Black Fox. We expect the NI 43-101 report to reflect an increase in reserves based on the extensive drilling programs conducted during 2004 and 2005. In addition, a feasibility study is underway, which we expect to complete by the end of 2006.

Proven and Probable Reserves - Gold Ounces

Mines	Year Ended December 31,		
	2005	2004	2003
Montana Tunnels (1)	535,900	643,800	692,500
Black Fox Project	457,100	457,100	457,100
Apollo Gold - Total	993,000	1,100,900	1,149,600

(1) In March 2006 the Company adopted a plan to dispose of the Montana Tunnels mine.

Montana Tunnels Reserves

Montana Tunnels Mine Reserve Statement at December 31, 2005(1)(2)

Pit (Imperial Summary)	Classification	Tons 000's	Grade oz Au/t	Ag oz Ag/t	Pb %	Zn %	Ounces
							Au 000's
L8J5 (L Pit)	Proven	10,089.2	0.016	0.173	0.218	0.591	163.6
M4A (M Pit)	Proven

Total	Proven + Probable	33,240.6	0.016	0.212	0.185	0.596	535.9

(1) Recovery rates are expected to be 80% for gold, 71% for silver, 85% for lead, and 84% for zinc.

(2) In March 2006 the Company adopted a plan to dispose of the Montana Tunnels mine.

Black Fox Reserves

Pit optimization studies were completed using the following parameters for the deposit:

- Cut-off grade- 1.27 Au g/tonne (or 0.037 oz Au/t);
- Overburden mining cost - \$1.00 per tonne of material;
 - Rock mining cost - \$1.25 per tonne of material
 - Processing cost - \$9.00 per tonne ore;
- General and administrative cost - \$3.50 per tonne ore;
 - Plant gold recovery - 96%;
- Assume 50% of existing underground workings backfilled with material having a density of 2.0;
 - Pit slopes - 48 degree overall in rock with ramp; 19 degree overburden

Black Fox Reserve Statement at December 31, 2005

Classification (Imperial Summary)	Tons 000's	Grade oz Au/t	Ounces Au 000's	Tons Waste 000's	Strip Ratio
Proven	2,418.0	0.141	341.6		
Probable	837.4	0.138	115.5		
Total - Proven + Probable	3,255.5	0.140	457.1	60,734.5	18.66

Waste includes 12.18 million tons of overburden.

Employee Relations

As of December 31, 2005, we had approximately 129 employees and contract employees, including 10 employees at our principal executive office in Greenwood Village, Colorado. If we sell Montana Tunnels or cease milling, we expect to have approximately 30 employees and contract employees, including 6 employees at our principal executive office.

Competition

We compete with major mining companies and other natural mineral resource companies in the acquisition, exploration, financing and development of new prospects. Many of these companies are larger and better capitalized than we are. There is significant competition for the limited number of gold acquisition and exploration opportunities. Our competitive position depends upon our ability to successfully and economically explore, acquire and develop new and existing mineral prospects. Factors that allow producers to remain competitive in the market over the long term include the quality and size of their orebodies, costs of operation, and the acquisition and retention of qualified employees. We also compete with other mining companies for skilled mining engineers, mine and processing plant operators and mechanics, geologists, geophysicists and other technical personnel. This could result in higher turnover and greater labor costs.

Available Information

We make available, free of charge, on or through our Internet website links to our Annual Report on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Exchange Act as soon as reasonably practicable after we electronically file such material with, or furnish it to, the SEC. Our Internet address is www.apollogold.com. Our Internet website and the information contained therein or connected thereto are not incorporated into this Annual Report on Form 10-K.

RISK FACTORS

ITEM 1A.

In addition to historic information, the information in this Annual Report on Form 10-K contains "forward looking" statements about our future business and performance. Our actual operating results and financial performance may be very different from what we expect as of the date of this Annual Report on Form 10-K. The risks below address some of the factors that may affect our future operating results and financial performance.

We have identified a material weakness in our internal controls over financial reporting.

We identified a material weakness for the year ended December 31, 2004. A material weakness is a significant deficiency, or combination of significant deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected. We lacked appropriate review of non-routine or complex accounting matters, related accounting entries, and appropriate documentation, disclosure and application of Canadian and U.S. GAAP, primarily due to a lack of sufficient personnel with a level of technical accounting expertise commensurate with our reporting requirements.

The following actions were taken in 2005 to remediate this material weakness. We established a Financial Disclosure Policy Committee to review all non-routine accounting matters and disclosure and application of Canadian and U.S. GAAP. We added additional technical accounting expertise to the accounting staff. We implemented formal policies addressing the internal controls over non-routine or complex accounting matters, accounting entries, appropriate documentation, and disclosures. However, in January 2006 a major restructuring and streamlining at the corporate office significantly changed the design and structure of the internal controls and procedures at the corporate level. As

of this date management has not had sufficient time to evaluate these controls and therefore believes this material weakness still exists.

- 21 -

Additionally, related to the reduction in staffing at the Montana Tunnels mine in mid October 2005, our controls at that location are not operating as previously designed related to segregation of duties over procurement, inventory control and accounting duties. Corporate management has increased its involvement with day-to-day oversight and management of the Montana Tunnels mine, but as of this date, management has not had sufficient time to evaluate these controls and therefore believes the change in controls is significant enough to be reported as a material weakness. In an effort to address this material weakness, staffing requirements and other changes in control are being evaluated as the future operational requirements of the Montana Tunnels mine is being determined.

As a result of the issuance of the SEC's Release No 33-8644, "Revisions to Accelerated Filer Definition and Accelerated Deadlines for Filing Periodic Reports" the Company exited accelerated filer status for its year ended December 31, 2005. As a non-accelerated filer compliance with the internal control reporting requirements of Section 404 of the Sarbanes-Oxley Act of 2002 have been deferred and we may be subject to the requirements in our Annual Report on Form 10-K for fiscal year 2006 and will be for fiscal year 2007.

The market price of our common shares could experience volatility and could decline significantly.

Our common shares are listed on the American Stock Exchange and the Toronto Stock Exchange. Our share price has declined significantly since 2004. Securities of small-cap companies have experienced substantial volatility in the past, often based on factors unrelated to the financial performance or prospects of the companies involved. These factors include macroeconomic developments in North America and globally and market perceptions of the attractiveness of particular industries. Our share price is also likely to be significantly affected by short-term changes in gold prices or in our financial condition or results of operations as reflected in our quarterly earnings reports. As a result of any of these factors, the market price of our common shares at any given point in time might not accurately reflect our long-term value. Securities class action litigation often has been brought against companies following periods of volatility in the market price of their securities. We could in the future be the target of similar litigation. Securities litigation could result in substantial costs and damages and divert management's attention and resources.

If we complete additional equity financings, then our existing shareholders may experience dilution.

Any additional equity financing that we obtain would involve the sale of our common shares and/or sales of securities that are convertible or exercisable into our common shares, such as share purchase warrants or convertible notes. There is no assurance that we will be able to complete equity financings that are not dilutive to our existing shareholders.

The existence of outstanding rights to purchase common shares may impair our ability to raise capital.

As of March 24, 2006, approximately 30 million additional common shares are issuable on exercise of warrants, options or other rights to purchase common shares at prices ranging from \$0.20 to \$2.34. In addition, there are approximately 11.7 million common shares issuable upon the conversion of the \$8,731,000 outstanding principal amount of our Series B Convertible Debentures at the option of the holder at a conversion price of \$0.75 per share. During the term of the warrants, options and other rights, the holders are given an opportunity to profit from a rise in the market price of our common shares with a resulting dilution in the interest of the other shareholders. Our ability to obtain additional financing during the period such rights are outstanding may be adversely affected, and the existence of the rights may have an adverse effect on the price of our common shares. The holders of the warrants, options and other rights can be expected to exercise them at a time when we would, in all likelihood, be able to obtain any needed capital by a new offering of securities on terms more favorable than those provided by the outstanding rights.

There may be certain tax risks associated with investments in our company.

Potential investors that are United States taxpayers should consider that we could be considered to be a “passive foreign investment company” (“PFIC”) for federal income tax purposes. Although we believe that we currently are not a PFIC and do not expect to become a PFIC in the near future, the tests for determining PFIC status are dependent upon a number of factors, some of which are beyond our control, and we can not assure you that we will not become a PFIC in the future. If we were deemed to be a PFIC, then a United States taxpayer who disposes or is deemed to dispose of our shares at a gain, or who received a so-called “excess distribution” on the shares, generally would be required to treat such gain or excess distribution as ordinary income and pay an interest charge on a portion of the gain or distribution unless the taxpayer makes a timely qualified electing fund election (a “QEF” election). A United States taxpayer who makes a QEF election generally must report on a current basis his or her share of any of our ordinary earnings and net capital gain for any taxable year in which we are a PFIC, whether or not we distribute those earnings. Special estate tax rules could be applicable to our shares if we are classified as a PFIC for income tax purposes.

We have a history of losses and we expect to incur losses in the future.

Since our inception through a merger in June 2002, we have incurred significant losses and we expect significant losses to continue for the foreseeable future. Our net losses were \$22,208,000, \$31,007,000 and \$14,090,000 for the years ended December 31, 2005, 2004 and 2003, respectively. There can be no assurance that we will achieve or sustain profitability in the future.

We have a limited operating history on which to evaluate our potential for future success.

We were formed as a result of a merger in June 2002 and have only a limited operating history upon which you can evaluate our business and prospects. During this period, we have not generated sufficient revenues to cover our expenses and costs. If we are unsuccessful in addressing these risks and uncertainties, our business, results of operations and financial condition will be materially and adversely affected.

We are dependent on certain key personnel.

We are currently dependent upon the ability and experience of R. David Russell, our President and Chief Executive Officer; Richard F. Nanna, our Senior Vice President-Exploration; and Melvyn Williams, our Chief Financial Officer and Senior Vice President-Finance and Corporate Development. We believe that our success depends on the continued service of our key officers and there can be no assurance that we will be able to retain any or all of such officers. We currently do not carry key person insurance on any of these individuals, and the loss of one or more of them could have a material adverse effect on our operations.

Our earnings may be affected by metals price volatility, specifically the volatility of gold and zinc prices.

We derive all of our revenues from the sale of gold, silver, lead and zinc and our development and exploration activities are focused on gold. As a result, our earnings are directly related to the prices of these metals. Changes in the price of gold significantly affect our profitability. Gold prices historically have fluctuated widely, based on numerous industry factors including:

- industrial and jewelry demand;
- central bank lending, sales and purchases of gold;
- forward sales of gold by producers and speculators;
- production and cost levels in major gold-producing regions; and
- rapid short-term changes in supply and demand because of speculative or hedging activities.

Gold prices are also affected by macroeconomic factors, including:

- confidence in the global monetary system;
- expectations of the future rate of inflation (if any);
- the strength of, and confidence in, the U.S. dollar (the currency in which the price of gold is generally quoted) and other currencies;
- interest rates; and
- global or regional political or economic events, including but not limited to acts of terrorism.

The current demand for, and supply of, gold also affects gold prices. The supply of gold consists of a combination of new production from mining and existing shares of bullion held by government central banks, public and private financial institutions, industrial organizations and private individuals. As the amounts produced by all producers in any single year constitute a small portion of the total potential supply of gold, normal variations in current production do not usually have a significant impact on the supply of gold or on its price. Mobilization of gold held by central banks through lending and official sales may have a significant adverse impact on the gold price.

The market prices for silver, zinc and lead are also volatile and are affected by numerous factors beyond our control, including global or regional consumptive patterns, speculative activities, and general global political and economic conditions.

All of the above factors are beyond our control and are impossible for us to predict. If the market prices for gold, silver, zinc or lead fall below our costs to produce them for a sustained period of time, we will experience additional losses and we could also be required by our reduced revenue to discontinue exploration, development and/or mining at one or more of our properties.

Our reserve estimates are potentially inaccurate.

We estimate our reserves on our properties as either “proven reserves” or “probable reserves.” Our ore reserve figures and costs are primarily estimates and are not guarantees that we will recover the indicated quantities of these metals. We estimate proven reserve quantities based on sampling and testing of sites conducted by us and by independent companies hired by us. Probable reserves are based on information similar to that used for proven reserves, but the sites for sampling are less extensive, and the degree of certainty is less. Reserve estimation is an interpretive process based upon available geological data and statistical inferences and is inherently imprecise and may prove to be unreliable.

Our reserves are reduced as existing reserves are depleted through production. Reserves may be reduced due to lower than anticipated volume and grade of reserves mined and processed and recovery rates.

Reserve estimates are calculated using assumptions regarding metals prices. These prices have fluctuated widely in the past. Declines in the market price of metals, as well as increased production costs, capital costs and reduced recovery rates, may render reserves uneconomic to exploit. Any material reduction in our reserves may lead to increased net losses, reduced cash flow, asset write-downs and other adverse effects on our results of operations and financial condition. Reserves should not be interpreted as assurances of mine life or of the profitability of current or future operations. No assurance can be given that the amount of metal estimated will be produced or the indicated level of recovery of these metals will be realized.

We may not achieve our production estimates.

We prepare estimates of future production for our operations. We develop our estimates based on, among other things, mining experience, reserve estimates, assumptions regarding ground conditions and physical characteristics of ores (such as hardness and presence or absence of certain metallurgical characteristics) and estimated rates and costs of mining and processing. In the past, our actual production from time to time has been lower than our production estimates and this may be the case in the future.

Each of these factors also applies to future development properties and to any future recommencement of mining at Montana Tunnels. In the case of mines we may develop in the future, we do not have the benefit of actual experience in our estimates, and there is a greater likelihood that the actual results will vary from the estimates. In addition, development and expansion projects are subject to unexpected construction and start-up problems and delays.

Our future profitability depends in part, on actual economic returns and actual costs of developing mines, which may differ significantly from our estimates and involve unexpected problems, costs and delays.

From time to time we will engage in the development of new ore bodies. Our ability to sustain or increase our present level of production is dependent in part on the successful exploration and development of new ore bodies and/or expansion of existing mining operations. Decisions about the development of Black Fox and other future projects are subject to the successful completion of feasibility studies, issuance of necessary governmental permits and receipt of adequate financing.

Development projects have no operating history upon which to base estimates of future cash flow. Our estimates of proven and probable ore reserves and cash operating costs are, to a large extent, based upon detailed geologic and engineering analysis. We also conduct feasibility studies that derive estimates of capital and operating costs based upon many factors.

It is possible that actual costs and economic returns may differ materially from our best estimates. It is not unusual in the mining industry for new mining operations to experience unexpected problems during the start-up phase and to require more capital than anticipated. There can be no assurance that the Black Fox property will be profitable.

Exploration in general, and gold exploration in particular, are speculative and are frequently unsuccessful.

Mineral exploration, particularly for gold and silver, is highly speculative in nature, capital intensive, involves many risks and frequently is nonproductive. There can be no assurance that our mineral exploration efforts will be successful. If we discover a site with gold or other mineralization, it will take a number of years from the initial phases of drilling until production is possible, during which time the economic feasibility of production may change. Substantial expenditures are required to establish ore reserves through drilling, to determine metallurgical processes to extract the metals from the ore and, in the case of new properties, to construct mining and processing facilities. As a result of these uncertainties, no assurance can be given that our exploration programs will result in the expansion or replacement of existing ore reserves that are being depleted by current production.

We have experienced operational problems at our Montana Tunnels mine.

All of our revenues are currently derived from our milling operations at the Montana Tunnels mine, which is a low-grade mine. Historically, the Montana Tunnels mine has been unprofitable. During 2004 we experienced problems related to the milling of low-grade ore at the Montana Tunnels mine, which negatively affected our revenues and earnings and throughout 2005 we experienced operational problems, particularly in the open pit, leading to the suspension of mining on October 21, 2005, for safety reasons due to increased wall activity in the open pit. Since suspension of mining the Company has continued to produce gold doré, lead-gold and zinc-gold concentrates from milling low grade stockpiled ore. The Montana Tunnels mine plans to continue milling this ore through the end of April 2006. In March 2006, the Company adopted a plan to dispose of the Montana Tunnels mine.

We do not currently have and may not be able to raise the funds necessary to explore and develop our Black Fox and Huizopa properties and our other properties.

We do not currently have sufficient funds to complete all of our planned exploration activities at Black Fox and Huizopa or to develop a mine at Black Fox. The development of Black Fox, and exploration of Huizopa and our other properties will require significant capital expenditures. Sources of external financing may include bank and nonbank borrowings and future debt and equity offerings. There can be no assurance that financing will be available on acceptable terms, or at all. The failure to obtain financing would have a material adverse effect on our growth strategy and our results of operations and financial condition.

Our Black Fox property is pledged to the holders of our 12% Series 2004-B Secured Convertible Debentures and we may not be able to obtain financing from an asset based lender.

Our Black Fox property is pledged to the holders of our 12% Series 2004-B Secured Convertible Debentures as security for our obligations under these debentures. It may be difficult for us to raise additional external funds through banks, asset based lenders, or other types of lenders, which may require us to raise additional funds through future debt and equity offerings. In addition, the inability to pledge any additional significant assets may make it difficult or impossible to obtain financing on acceptable terms, or at all. The failure to obtain acceptable financing would have a material adverse effect on our growth strategy and our results of operations and financial condition.

Possible hedging activities could expose us to losses.

In the future, we may enter into precious and/or base metals hedging contracts that may involve outright forward sales contracts, spot-deferred sales contracts, the use of options which may involve the sale of call options and the purchase of all these hedging instruments. There can be no assurance that we will be able to successfully hedge against price, currency and interest rate fluctuations. In addition, our ability to hedge against zinc and lead price risk in a timely manner may be adversely affected by the smaller volume of transactions in both the zinc and lead markets. Further, there can be no assurance that the use of hedging techniques will always be to our benefit. Some hedging instruments may prevent us from realizing the benefit from subsequent increases in market prices with respect to covered production. This limitation would limit our revenues and profits. Hedging contracts are also subject to the risk that the other party may be unable or unwilling to perform its obligations under these contracts. Any significant nonperformance could have a material adverse effect on our financial condition and results of operations.

We face substantial governmental regulation.

Safety. Our U.S. mining operation is subject to inspection and regulation by the Mine Safety and Health Administration of the United States Department of Labor (“MSHA”) under the provisions of the Mine Safety and Health Act of 1977. The Occupational Safety and Health Administration (“OSHA”) also has jurisdiction over safety and health standards not covered by MSHA. Our policy is to comply with applicable directives and regulations of MSHA and OSHA. We have made and expect to make in the future, significant expenditures to comply with these laws and regulations.

Current Environmental Laws and Regulations. We must comply with environmental standards, laws and regulations that may result in increased costs and delays depending on the nature of the regulated activity and how stringently the regulations are implemented by the regulatory authority. The costs and delays associated with compliance with such laws and regulations could stop us from proceeding with the exploration of a project or the operation or future exploration of a mine. Laws and regulations involving the protection and remediation of the environment and the governmental policies for implementation of such laws and regulations are constantly changing and are generally becoming more restrictive. We have made, and expect to make in the future, significant expenditures to comply with such laws and regulations.

Some of our properties are located in historic mining districts with past production and abandoned mines. The major historical mine workings and processing facilities owned (wholly or partially) by us in Montana are being targeted by the Montana Department of Environmental Quality (“MDEQ”) for publicly funded cleanup, which reduces our exposure to financial liability. We are participating with the MDEQ under Voluntary Cleanup Plans on those sites. Our cleanup responsibilities have been completed at the Corbin Flats Facility and at the Gregory Mine site, both located in Jefferson County, Montana, under programs involving cooperative efforts with the MDEQ. MDEQ is also contemplating remediation of the Washington Mine site at public expense under the Surface Mining Control and Reclamation Act of 1977 (“SMCRA”). In February 2004, we consented to MDEQ’s entry onto the portion of the Washington Mine site owned by us to undertake publicly funded remediation under SMCRA. In March 2004, we entered into a definitive written settlement agreement with MDEQ and the Bureau of Land Management (“BLM”) under which MDEQ will conduct publicly funded remediation of the Wickes Smelter site under SMCRA and will grant us a site release in exchange for our donation of the portion of the site owned by us to BLM for use as a waste repository. However, there can be no assurance that we will continue to resolve disputed liability for historical mine and ore processing facility waste sites on such favorable terms in the future. We remain exposed to liability, or assertions of liability, that would require expenditure of legal defense costs, under joint and several liability statutes for cleanups of historical wastes that have not yet been completed.

Environmental laws and regulations may also have an indirect impact on us, such as increased costs for electricity due to acid rain provisions of the Clean Air Act Amendments of 1990. Charges by refiners to which we sell our metallic concentrates and products have substantially increased over the past several years because of requirements that refiners meet revised environmental quality standards. We have no control over the refiners' operations or their compliance with environmental laws and regulations.

Potential Legislation. Changes to the current laws and regulations governing the operations and activities of mining companies, including changes to the U.S. General Mining Law of 1872, and permitting, environmental, title, health and safety, labor and tax laws, are actively considered from time to time. We cannot predict which changes may be considered or adopted and changes in these laws and regulations could have a material adverse impact on our business. Expenses associated with the compliance with new laws or regulations could be material. Further, increased expenses could prevent or delay exploration or mine development projects and could therefore affect future levels of mineral production.

We are subject to environmental risks.

Environmental Liability. We are subject to potential risks and liabilities associated with environmental compliance and the disposal of waste rock and materials that could occur as a result of our mineral exploration and production. To the extent that we are subject to environmental liabilities, the payment of such liabilities or the costs that we may incur to remedy any non-compliance with environmental laws would reduce funds otherwise available to us and could have a material adverse effect on our financial condition or results of operations. If we are unable to fully remedy an environmental problem, we might be required to suspend operations or enter into interim compliance measures pending completion of the required remedy. The potential exposure may be significant and could have a material adverse effect on us. We have not purchased insurance for environmental risks (including potential liability for pollution or other hazards as a result of the disposal of waste products occurring from exploration and production) because it is not generally available at a reasonable price or at all.

Environmental Permits. All of our exploration, development and production activities are subject to regulation under one or more of the various state, federal and provincial environmental laws and regulations in Canada, Mexico and the U.S. Many of the regulations require us to obtain permits for our activities. We must update and review our permits from time to time, and are subject to environmental impact analyses and public review processes prior to approval of the additional activities. It is possible that future changes in applicable laws, regulations and permits or changes in their enforcement or regulatory interpretation could have a significant impact on some portion of our business, causing those activities to be economically reevaluated at that time. Those risks include, but are not limited to, the risk that regulatory authorities may increase bonding requirements beyond our financial capabilities. The posting of bonding in accordance with regulatory determinations is a condition to the right to operate under all material operating permits, and therefore increases in bonding requirements could prevent our operations from continuing even if we were in full compliance with all substantive environmental laws.

We face strong competition from other mining companies for the acquisition of new properties.

Mines have limited lives and as a result, we may seek to replace and expand our reserves through the acquisition of new properties. In addition, there is a limited supply of desirable mineral lands available in the United States, Canada and Mexico and other areas where we would consider conducting exploration and/or production activities. Because we face strong competition for new properties from other mining companies, some of which have greater financial resources than we do, we may be unable to acquire attractive new mining properties on terms that we consider acceptable.

The titles to some of our properties may be uncertain or defective.

Certain of our United States mineral rights consist of “unpatented” mining claims created and maintained in accordance with the U.S. General Mining Law of 1872. Unpatented mining claims are unique U.S. property interests, and are generally considered to be subject to greater title risk than other real property interests because the validity of unpatented mining claims is often uncertain. This uncertainty arises, in part, out of the complex federal and state laws and regulations that supplement the General Mining Law. Also, unpatented mining claims and related rights, including rights to use the surface, are subject to possible challenges by third parties or contests by the federal government. The validity of an unpatented mining claim, in terms of both its location and its maintenance, is dependent on strict compliance with a complex body of federal and state statutory and decisional law. In addition, there are few public records that definitively control the issues of validity and ownership of unpatented mining claims.

In recent years, the U.S. Congress has considered a number of proposed amendments to the General Mining Law. Although no such legislation has been adopted to date, there can be no assurance that such legislation will not be adopted in the future. If ever adopted, such legislation could, among other things, impose royalties on gold production from unpatented mining claims located on federal lands or impose fees on production from patented mining claims. If such legislation is ever adopted, it could have an adverse impact on earnings from our operations, could reduce estimates of our reserves and could curtail our future exploration and development activity on federal lands or patented claims.

While we have no reason to believe that the existence and extent of any of our properties are in doubt, title to mining properties are subject to potential claims by third parties claiming an interest in them.

We may lose rights to properties if we fail to meet payment requirements or development or production schedules.

We derive the rights to most of our mineral properties from unpatented mining claims, leaseholds, joint ventures or purchase option agreements which require the payment of maintenance fees, rents, or purchase price installments, exploration expenditures, or other fees. If we fail to make these payments when they are due, our rights to the property may lapse. There can be no assurance that we will always make payments by the requisite payment dates. In addition, some contracts with respect to our mineral properties require development or production schedules. There can be no assurance that we will be able to meet any or all of the development or production schedules. Our ability to transfer or sell our rights to some of our mineral properties requires government approvals or third party consents, which may not be granted.

Our operations may be adversely affected by risks and hazards associated with the mining industry.

Our business is subject to a number of risks and hazards including adverse environmental effects, technical difficulties due to unusual or unexpected geologic formations, and pit wall failures.

Such risks could result in personal injury, environmental damage, damage to and destruction of production facilities, delays in mining and liability. For some of these risks, we maintain insurance to protect against these losses at levels consistent with our historical experience and industry practice. However, we may not be able to maintain current levels of insurance, particularly if there is a significant increase in the cost of premiums. Insurance against environmental risks is generally too expensive or not available for us and other companies in our industry, and, therefore, we do not maintain environmental insurance. To the extent we are subject to environmental liabilities, we would have to pay for these liabilities. Moreover, in the event that we are unable to fully pay for the cost of remedying an environmental problem, we might be required to suspend or significantly curtail operations or enter into other interim compliance measures.

You could have difficulty or be unable to enforce certain civil liabilities on us, certain of our directors and our experts.

We are a Yukon Territory, Canada, corporation. Substantially all of our assets are located inside of Canada and our head office is located in the United States. Additionally, a number of our directors and the experts named in this Annual Report on Form 10-K are residents of Canada. Although we have appointed Lackowicz, Shier & Hoffman as our agents for service of process in the Yukon Territory, it might not be possible for investors to collect judgments obtained in Canadian courts predicated on the civil liability provisions of securities legislation. It could also be difficult for you to effect service of process in connection with any action brought in the United States upon such directors and experts. Execution by United States courts of any judgment obtained against us, or any of the directors, executive officers or experts named in this Annual Report on Form 10-K, in United States courts would be limited to the assets or the assets of such persons or corporations, as the case might be, in the United States. The enforceability in Canada of United States judgments or liabilities in original actions in Canadian courts predicated solely upon the civil liability provisions of the federal securities laws of the United States is doubtful.

ITEM 2. DESCRIPTION OF PROPERTIES

Maps of Operations and Properties

The maps below show the locations of the Montana Tunnels mine, the Black Fox project and the Huizopa project in North America. These properties are described in further detail below.

Figure 1 - Property locations in North America

- 31 -

Montana Tunnels Mine

The mine was originally owned, constructed and operated in 1987 by Pegasus Gold (“Pegasus”), a mining company incorporated in Canada. In 1998, Pegasus filed for bankruptcy and in 2002, Apollo purchased Montana Tunnels Mining, Inc., the owner and operator of the Montana Tunnels mine.

Figure 2 - Montana Tunnels mine location in Montana, U.S.

- 32 -

Location

The Montana Tunnels mine is an open pit, poly-metallic mine and mill located about five miles west of Jefferson City, Montana. The mine is located in the historic "Wickes-Corbin" mining district in Section 8 of Township 7 North, Range 4 West, Jefferson County. The mine's elevations range from 5,200 to 6,300 feet with moderately mountainous topography that is cut by conveyers with steeper slopes. The mine is easily accessible by way of interstate highway and paved roads. The mine and mill receive power supply from Northwestern Energy from overland power lines.

Production

For the year ended December 31, 2005, a total of 44,682 ounces of gold, 544,613 ounces of silver, 10,428,061 lbs of lead and 22,380,136 lbs of zinc were produced. Most of this production was from modeled and unmodeled "fringe" ores mined from the open pit through mid October, 2005.

Mining was suspended mid October 2005 as a result of pit wall instability in September and early October 2005 along the upper East Wall of the open pit. The instability is the result of a complex interaction between relatively weak, altered Lowland Creek Volcanic (LCV) rock units, steeply dipping faults and joints, and occasional zones of relatively less altered and more competent sub-vertical rock zones. Toppling type displacement patterns were evident where the more resistant rock outcrops within weak, sheared LCV rock units on the upper East Wall. The pattern of displacements that occurred during September and October 2005 was consistent with previous slope performance when active mining unloads the toe of the slope.

The on-going slope deformations resulted in too steep a slope between the ramps and weakening of the rock mass, creating localized instabilities along the haul ramp that reduced ramp width and increased the frequency of rock falls. We therefore decided on October 22, 2005, for safety reasons, to cease mining and retain a third party consultant to review mine design criteria and determine scenarios under which mining the pit could safely resume.

The consultant focused on geotechnical issues associated with the East Wall area and upper access ramp location for the open pit, completing its work in late November. The consultant developed several alternative mine designs and plans for ramp relocation, unloading the upper benches and remediation. Each plan calls for additional unloading of up to 4.6 million tons from upper benches of the East Wall to mitigate rock fall hazards by reducing slope deformation and rock mass degradation in the weak rock units exposed along the upper East Wall. The plans also call for a new, wider haul ramp to reduce the potential for haul ramp instability along the East Wall. In addition, mining practices would be changed to increase the rate at which upper benches are unloaded during mining operations. The estimated cost of completing the East Wall remediation, waste material removal, ramp relocation and widening is approximately \$12 million.

Since the open pit mine operations were suspended, the mill has been producing gold doré and lead-gold and zinc-gold concentrate from low grade ore stockpiles. On January 31, 2006, we gave a Workers Adjustment and Retraining Notification ("WARN") Act Notice to all hourly and salaried Montana Tunnels Mining, Inc. employees. The WARN Act requires companies to give employees 60 days' notice prior to a plant shutdown or mass layoff. We now expect to postpone a mass layoff until late April 2006 as we continue to mill low grade stockpiled ore. In March 2006 the Company adopted a plan to dispose of the Montana Tunnels mine. The following table sets forth annual production levels for gold, silver, lead and zinc at the Montana Tunnels mine since 2003.

Montana Tunnels Mine Production History

Year	Milled Tons	Year Ended December 31,				Pb %	Tons Pb	Zn %	Tons Zn
		Au Oz Au/t	Oz Au 000's	Ag Oz Ag/t	Oz Ag 000's				

Edgar Filing: APOLLO GOLD CORP - Form 10-K

	000's				000's				
2005	4,955	0.0129	44.6	0.19	544.6	0.15	5.2	0.34	11.6
2004	5,394	0.0096	33.7	0.32	970.8	0.14	5.0	0.37	13.1
2003	4,663	0.0157	44.1	0.22	411.2	0.19	5.4	0.44	10.9

Payable Metal	Year Ended December 31,		
	2005	2004	2003
Gold (oz)	44,682	33,743	44,124
Silver (oz)	544,613	970,751	411,216
Lead (lb)	10,515,148	10,064,265	10,843,184
Zinc (lb)	23,255,833	26,222,805	21,792,452

	Year Ended December 31,		
	2005	2004	2003
Total Cost/ Ton Ore Processed	\$ 9.46	\$ 9.47	\$ 7.10
Cash Operating Cost/Oz Gold	\$ 529.36	\$ 797.91	\$ 432.42
Total Cash Cost/Oz Gold	\$ 562.96	\$ 838.54	\$ 456.96
Total Production Cost/Oz Gold	\$ 617.77	\$ 913.43	\$ 595.66

In 2006 the Montana Tunnels mine continues to produce metals by milling low grade ore stockpiles and plans to continue through the end of April 2006. Production at Montana Tunnels is not currently cash positive. The revenue generated does pay for the variable cost of production and contributes to the fixed costs of the mine. In March 2006, the Company adopted a plan to dispose of the Montana Tunnels mine.

The mine produced the following aggregate amounts of the listed metals from its inception in 1987 through December 31, 2005.

	Production
Gold	1,503,000 ozs
Silver	27,678,000 ozs
Lead	354,000,000 lbs.
Zinc	946,800,000 lbs.

Description of Land, Geology, Process and Equipment

About half of Section 8 lands are our owned fee lands. Mining claims that cover the pit are listed in the table below.

Claims Covering Montana Tunnels Mine

Patented Claims	Mineral Survey	Unpatented Claims
Geraldine C	9184	MF 1
P.Q.C	9184	F 14
Montana	9184	F 15
General Harris	2038	-
Black Rock No. 2	9184	-
Black Rock No. 3	8940	-
D.E.D	9184	-
Placer	258	-
Anna	8940	-

We own or lease an aggregate of 5,088 acres in fee and patented lands at the Montana Tunnels mine. The property consists of 139 wholly or partially owned patented claims (2,413.42 acres), three patented leased claims (45.19 acres) which we hold pursuant to a mining lease expiring on March 19, 2014, and 2,629.44 acres of owned fee lands. All patented claims and fee lands have been surveyed. In addition, 213 unpatented claims are maintained (4,260 acres). We estimate that 90% of the unpatented claims have been surveyed. A number of claims outside the contiguous mining claims and fee land are isolated.

None of the Montana Tunnels mine's reserves are subject to royalties, but we do have three leased claims that contain mineralization, which will be subject to a 4.5% net smelter return royalty if they are mined. The annual holding costs of the Montana Tunnels properties, exclusive of property taxes, total \$52,582.

The Montana Tunnels deposit is hosted in the central part of the diatreme, an upward-sloping passage forced through sedimentary rock by volcanic activity. The diatreme is a heterolithic breccia, characterized by a sand-size fragmented matrix of quartz latitic composition surrounding subangular to well-rounded fragments of Cretaceous Elkhorn Mountains Volcanics, Tertiary Lowland Creek Volcanics, and clasts derived from the Cretaceous Butte Quartz Monzonite pluton.

There are two main zones of mineralization at Montana Tunnels: (i) a central, pipe-like core of contiguous mineralization, and (ii) discontinuous zones of mineralization peripheral to the core deposit, termed fringe mineralization. The core of the deposit in plan view is oblong in shape and ranges from about 200 feet to 1000 feet in width, and from 1400 to 2000 feet in length, with a vertical extent of at least 2000 feet. The core zone strikes approximately N30 E and dips steeply (60 degrees to 80 degrees) to the northwest. Metallurgical projections are based on historical feed grade versus tails grade trends; mill throughput tonnage, ore properties relative to pit location and bench elevation; and ore blending requirements.

Prior to suspending mining in October 2005, open pit mining at Montana Tunnels was normally conducted 24 hours per day seven days per week. Mining was performed by two shovels, eight 150 ton and two 85 ton haul trucks in addition to ancillary equipment. While fully operational, mine production averaged approximately 40,000 tons per day of ore and waste.

When in full production we use a primary and secondary crusher, in series, to generate a coarse ore stockpile ahead of the concentrator. The crusher has a capacity of 16,500 tons per day. The grinding circuit consists of a SAG mill, ball mill and tertiary crusher (SABC circuit) followed by conventional differential flotation. A gravity circuit, in closed loop with the ball mill, recovers 12-15% of gold produced by the concentrator. The remainder of the mill's production is in the form of concentrates: a zinc-gold concentrate and a lead-gold-silver concentrate. The dried concentrates are shipped, via rail, to a smelter. The original plant was constructed during 1986 and 1987, and is currently in good working order. In 2004, we increased mill capacity from 15,000 tons per day to 16,500 tons per day with the addition of a primary crusher.

Model Reconciliation

During 2005, in an effort to supply the mill with feed, larger ore zones of a lower grade were mined, most from outside of the modeled zones. The reconciliation to the model was skewed due to mining such large amounts of low grade ore outside the model to supply mill feed. In addition, the mill produces more gold than mine sampling can detect. Generally mined ounces of gold were as predicted but mined tons were higher and ore tons were lower.

The following table summarizes the reconciliation for the year ended December 31, 2005.

Summary of Operational Statistics for the Year Ended December 31, 2005

Entity	Tons 000's	Au opt	Ag opt	Pb %	Zn %	Au Ozs.	Ag Ozs.	Pb tons	Zn tons
Model	2,933.8	0.0173	0.19	0.19	0.47	50,749	558,750	5,569	13,647
Mine	4,124.0	0.0130	0.21	0.20	0.46	53,410	860,237	8,224	18,825
Mill	4,010.9	0.0140	0.19	0.17	0.37	55,064	747,847	6,833	14,788

Note: The above comparison is for production through mid-October 2005.

Mineral Reserves

The table below shows the mineral reserves at Montana Tunnels.

Montana Tunnels Mine Reserve Statement at December 31, 2005(1)(2)

Pit (Imperial Summary)	Classification	Tons 000's	Grade oz Au/t	Ag oz Ag/t	Pb %	Zn %	Ounces Au 000's
L8J5 (L Pit)	Proven	10,089.2	0.016	0.173	0.218	0.591	163.6
M4A (M Pit)	Proven						
Mill Stockpile	Proven	36.0	0.009	0.180	0.080	0.190	0.3
Subtotal	Proven	10,125.2	0.016	0.173	0.217	0.589	163.9
L8J5 (L Pit)	Probable	217.4	0.016	0.175	0.208	0.508	3.5
M4A (M Pit)	Probable	22,898.0	0.016	0.230	0.170	0.600	368.5
Subtotal	Probable	23,115.4	0.016	0.230	0.171	0.600	372.0
Total	Proven + Probable	33,240.6	0.016	0.212	0.185	0.596	535.9

(1) Recovery rates are expected to be 80% for gold, 71% for silver, 85% for lead, and 84% for zinc.

(2) In March 2006 the Company adopted a plan to dispose of the Montana Tunnels mine.

Environmental

The permitted plan of operations allows mining of ore reserves from the L-Pit mine design. Unstable pit walls in the ramp sector on the east side of the mine closed down the open pit in October 2005, however, milling operations have continued processing stockpiled low grade ore. A pit wall layback and pit ramp reconstruction in the east sector of the open pit was subsequently developed using extensive geotechnical analysis to ensure stability and safety for ongoing mining operations. A permit revision for the pit wall layback and associated changes was approved by the Department of Environmental Quality in December 2005.

A major mine plan amendment (M-Pit) continues to progress through an Environmental Impact Statement permitting process. Approval for the M-Pit mine by the Montana Department of Environmental Quality and Bureau of Land Management will provide approximately 28 million tons of additional ore for processing.

The bonding requirements for the Montana Tunnels mine are met by the following bond instruments:

Type of Bonding	Year Ended December 31,	
	2005	2004
Partially secured surety bond issued by CNA pursuant to the Term Bonding Agreement described immediately below	\$ 14,987,688	\$ 14,987,688
Cash bond posted directly with the State of Montana	128,697	128,697
Real estate bond posted directly with State of Montana	1,264,893	772,570
Total Obligated Bonding Requirement Met	\$ 16,381,278	\$ 15,888,955

National Fire Insurance Company of Hartford, a unit of Continental Casualty Company ("CNA"), provides \$14,987,688 of the total reclamation bonding for the Montana Tunnels mine plan of operations at a deferred bond premium cost of \$14 per \$1,000 of bonding under a Term Bonding Agreement dated August 1, 2002.

Bonding requirements are subject to adjustment by the State of Montana for various reasons from time to time. As noted above, the bonding requirement for the Montana Tunnels mine increased from \$15,888,955 to \$16,381,278 during 2005 as the result of a minor revision to the operating permit and a bond inflation adjustment.

Black Fox Project

Figure 3 - Black Fox project location along Destor-Porcupine Fault Zone in Province of Ontario, Canada

- 37 -

Location

The Black Fox project is located approximately five miles east of the township of Matheson and 40 miles east of Timmins, Ontario, Canada. Lake Abitibi is six miles northwest of the project site. The property encompasses over 1,983 acres within the Hislop and Beatty Townships. Access and surface rights are owned solely by Apollo. The property is easily accessible by interstate highway and power is supplied by Hydro One.

The Black Fox property was formerly known as the Glimmer mine. In April 1996, Exall Resources Ltd. ("Exall") purchased 60% of the property from Hemlo Gold Inc., and Glimmer Resource Inc. ("Glimmer") held the remaining 40%.

In September, 2002, we purchased all of the real estate and related assets of the Glimmer Mine from Exall and Glimmer. The mine, which ceased operations in May 2001, was renamed Black Fox. Apollo paid Exall and Glimmer an aggregate purchase price consisting of Cdn\$3 million in cash and an aggregate of 2,080,000 of our common shares. Pursuant to the terms of the acquisition, an additional Cdn\$3 million was payable to Exall and Glimmer. See subsequent event Note 21 of the "Notes to the Consolidated Financial Statements".

Black Fox sits astride the Destor-Porcupine Fault Zone (DPFZ), which is a deep break in the Precambrian rocks of the Abitibi Greenstone Belt. This fault system hosts many of the deposits in the Timmins area. The system regionally strikes east-west and dips variably to the south. Black Fox lies on the southern limb of a large scale fold on a flexure in the DPFZ Fault where the strike changes from east-west to southeast. Folded and altered ultra mafic and mafic are the host rocks for mineralization. Gold occurs as free gold in quartz veining and stockworks in altered ultra mafics and in gold associated with pyrite in altered tholeiitic basalts.

From 1997 until 2001, the mine produced approximately 210,000 ounces of gold. In early 2003, we commenced a drilling program consisting of shallow holes to test the mine's open pit potential. During 2003, 297 surface core holes were completed with depths varying from 200 to 500 meters. As a result of this drilling, proven and probable open pit gold reserves at Black Fox of 457,000 ounces were identified and we published such reserve estimates in an NI 43-101 report in March 2004.

We are in the process of updating our reserves, and expect to report new reserve estimates, which we expect to include underground reserves, in April 2006 and issue an NI 43-101 report within 45 days of publishing the new reserves.

Property, plant and equipment at the mine consists of an administration office, change house facilities, core sheds and surface infrastructure for the mine (pumps, heating, etc.), all of which are in good working condition, with an aggregate value of \$1.0 million.

None of the currently defined reserves are subject to production royalties. However, the Ewen property (155 acres), purchased in 2003, is subject to a 3% net smelter return royalty if in the future any reserves are found on that property.

Mineral Reserves

The reserves reported in an NI 43-101 report in March 2004 of 457,000 ounces of gold were estimated based upon the 2003 exploration program and included a pre-feasibility study of developing an open pit mine on the Black Fox property. This study did not consider underground mining as an option. We report no reserves at Black Fox under SEC Industry Guide 7, which requires a final bankable feasibility study.

Black Fox Reserve Statement at December 31, 2005

Classification (Imperial Summary)	Tons 000's	Grade oz Au/t	Ounces Au 000's	Tons Waste 000's	Strip Ratio
Proven	2,418.0	0.141	341.6		
Probable	837.4	0.138	115.5		
Total - Proven + Probable	3,255.5	0.140	457.1	60,734.5	18.66

Waste includes 12.18 million tons of overburden.

See the proven and probable mineral reserve table in Item 1 of this Annual Report on Form 10-K.

Exploration and Development 2004

In February 2004, a new drilling program commenced which first required the existing ramp system to be extended down to the 235 meter level and the construction of a 913 meter drift so as to allow drilling of the orebody from underground. During 2004, 210 underground holes totaling 41,065 meters were drilled.

Also in 2004, an additional 105 surface holes were completed, totaling another 43,284 meters. Our objectives for drilling these surface holes were to better define the open pit reserves; extend our resources along strike; extend resources in the eastern and western extensions of the main structure, bracketing or undercutting known gold-bearing zones; and explore known geophysical targets.

In April 2004, through surface exploration drilling we discovered a new orebody in the footwall of the DPFZ. The discovery hole was based on the extension of an induced polarization anomaly. There are two components to the mineralization, the quartz breccia veins and the massive sulfide mineralization (Pb, Zn, Ag). These appear to be two mineralizing events sharing the same "plumbing system."

Exploration and Development 2005

During 2005 the surface and underground drilling programs continued with a total of 51 surface holes and 160 underground holes being completed. As of December 31, 2005, Apollo had completed a total of 449 surface diamond drill holes, totaling over 135,711 meters as well as 370 underground holes totaling 75,520.7 meters giving a to-date total for both of 211,232.6 meters as shown in the table below.

Drilling at Year Ended December 31, 2005

Drilling	<i>Holes Completed</i>	<i>Meters</i>
Surface 2005	51	9,813.6
UG 2005	160	34,455.8
Total All 2005 Drilling	211	44,269.4
Total Surface To Date	449	135,711.9
Total UG To Date	370	75,520.7
Grand Total All Drilling	819	211,232.6

Apollo's drilling supplemented the data from the 284 surface and 720 underground drill holes drilled by the previous owners. A table of total drill holes is shown below.

Black Fox Project Drill Hole Database

Company	Period	Location	Number	Meters
Noranda	1989-1994	Surface	142	27,930
Exall	1995-1999	Surface	142	21,295
Exall	1996-2001	Underground	720	62,827
Apollo	2002-2003	Surface	297	82,622
Apollo	2004	Surface	105	43,280
Apollo	2004	Underground	210	41,065
Apollo	2005	Surface	51	9,813
Apollo	2005	Underground	160	34,456
Totals			1,823	323,288

In 2005, we began the permitting process for the project, which we anticipate will take approximately two years based on a plan for a combined open pit and underground mine with a 1,500 tonnes per day on-site mill. The estimated cost of the mine and mill is approximately \$80 million.

Bonding

We met our bonding requirements, established by the Province of Ontario, for the Black Fox project through the following bonding instrument:

Type of Bonding	Year Ended December 31,	
	2005	2004
Letter of Credit issued by TD Canada Trust secured by pledged deposit account	Cdn\$644,650	Cdn\$489,200
Total Bonding Requirement met	Cdn\$644,650	Cdn\$489,200

The obligations to reimburse TD Canada Trust for any drawing under the letter of credit are secured by Apollo's maintenance of an amount equal to the amount available for drawing in a deposit account pledged to TD Canada Trust. The annual letter of credit fee is 1% of the amount available for drawing. Interest is earned on the deposit account at a rate established by TD Canada Trust from time to time.

Exploration Stage Properties

Huizopa

We own Mexican subsidiaries which own or have the right to acquire concessions at the Huizopa exploration project. Pursuant to an agreement with the previous owner of one of those Mexican subsidiaries (the "Previous Owner"), if we exercise our right to acquire those concessions at the Huizopa project on which we currently hold an option, one of our Mexican subsidiaries and a Mexican company owned by the Previous Owner will enter into a joint venture agreement governing activities at the Huizopa project going forward, pursuant to which we can elect to ultimately retain up to an 80% interest in the Huizopa project. If our Mexican subsidiary chooses not to go forward with the Huizopa project, it is obligated to transfer a controlling interest in the subsidiary that holds the option back to the Previous Owner, and to transfer 91% of the concessions it owns at the Huizopa project back to the Previous Owner.

The Huizopa project is located in the northern part of the Sierra Madre Gold Belt in the state of Chihuahua, Mexico, near the border with the State of Sonora, and encompasses a block of mining concession claims of approximately 22 sq. km. Huizopa is located about 17 km southwest of the Dolores project and approximately 33 km to the northeast of the Mulatos project. Mulatos and Dolores are both multi-million ounce gold-silver deposits owned by other companies that are currently in development. Sporadic shallow underground mining limited to a few high-grade zones was done in the past but no mining has taken place at Huizopa since 1936. The property is very remote and will be accessed initially by helicopter. During 2004, we acquired new claims that completely surround the old Huizopa land position and, as a result, have expanded our land position to a total of 128 sq. km.

The geology is characterized by a series of parallel, low sulfidation gold-silver, quartz veins hosted by Tertiary-age volcanic rocks. Silver to gold ratios in the veins and from the material on historic mine dumps indicate the Huizopa area hosts an extensive gold-bearing hydrothermal system. Two major parallel quartz vein systems with north trending structures contain many single vein outcrops 7 to 10 meters thick suggesting a series of stacked veins. Strike lengths are over 2.0 km on the property with untested down dip potential. The stratigraphy of the Huizopa area has two sections of relatively mafic lava flows with intercalated volcanoclastics. The dominant strike azimuths of faults are 340° and 160° with dips ranging from vertical to 33°. Most of these structures, including the major faults with associated thick gouge or breccia zones, dip eastward. These east dipping faults are the faults associated with quartz veins, brecciation, and mineralization.

Initial favorable geochemical sampling and field studies by the Previous Owner in December 2003 were confirmed by us when we reviewed the data and conducted a field evaluation between February and March 2004.

Mapping of the mining concession began in June 2004 and continued throughout 2005. The results were compiled and transferred to our new topography maps and air photos as well as the Mexican government's Chabacan topographical sheet which has been enlarged from 1:50,000 scale to 1:10,000. Geologic mapping suggests that the faults that host gold-silver mineralization may be more numerous and more continuous than earlier field work indicated. Petrographical examination revealed the presence of native gold, silver, and electrum in many samples and widespread vein features indicative of repeated boiling and explosive brecciation. Overall vein textures are consistent with high-level exposures of epithermal quartz-adularia and/or fault breccia veins.

Throughout 2006, we expect to continue mapping, trenching, sampling and conducting geophysical studies on the property, including the selection of several primary targets for drill sites and the commencement of a drilling program. The cost of the project is expected to be approximately \$2.3 million for the year 2006.

Diamond Hill

The Diamond Hill mine, which has been on care and maintenance since 2000, is owned by Montana Tunnels Mining, Inc. The mine is an underground gold mine and is located approximately 28 miles southeast of Helena, Montana, in Broadwater County and on the east flank of the Elkhorn Mountains, within the Hassel Mining District. The Diamond Hill mine was in production from 1996 to 2000, during which time, 775,000 tons of ore were mined at an average grade of 0.233 ounces of gold per ton. In March 2006, the Company adopted a plan to dispose of Montana Tunnels Mining, Inc., which owns the Diamond Hill mine.

The Diamond Hill mine covers over 2,590 acres of patented and unpatented claims. We have 100% ownership of the main patented claims that contain the current deposits, subject to a 0.5 to 1% net smelter return and a 10% net profits royalty. We also have 50% ownership of four additional patented claims, which are peripheral to the main land package. As of December 31, 2005, we hold 103 unpatented claims and lease 19 unpatented claims. The current mine permit covers 270 acres with most of the disturbance within a 27 acre area.

The Diamond Hill orebodies and mine workings are in solid unfractured rock and accordingly are amenable to low cost sublevel open stoping methods. Ore was transported to the Montana Tunnels mill facility by truck where it was processed in a separate circuit designed for Diamond Hill ore. Most of the gold was recovered into a high grade pyrite concentrate and sold to Japanese smelters.

The deposit is classed as a skarn hosted sulfide deposit where the predominant ore mineralogy is gold associated with pyrite and lesser other metal sulfides. The bonding requirements for Diamond Hill, totaling approximately \$623,000, are incorporated as part of the bonding at Montana Tunnels.

ITEM 3. LEGAL PROCEEDINGS

We are not currently subject to any material pending legal proceedings. We are, however, engaged in routine litigation incidental to our business. No material legal proceedings, involving us or our business are pending, or, to our knowledge, contemplated, by any governmental authority. We are not aware of any material events of noncompliance with environmental laws and regulations.

ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

No matters were submitted to a vote of security holders during the fourth quarter of 2005.

PART II - OTHER INFORMATION**ITEM 5. MARKET FOR THE REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES**

Our common shares are listed on the American Stock Exchange under the trading symbol "AGT" and on the Toronto Stock Exchange under the trading symbol "APG." As of March 24, 2006, 121,396,859 common shares were outstanding, and we had 1,750 shareholders of record. On March 24, 2006, the closing price per share for our common shares as reported by the American Stock Exchange was \$0.62 and as reported by the Toronto Stock Exchange was Cdn\$0.69.

The following table sets forth, for the periods indicated, the reported high and low market closing prices per share of our common shares:

	American Stock Exchange		Toronto Stock Exchange	
	High	Low	High	Low
	(\$)		(Cdn\$)	
2005				
First Quarter	\$ 0.81	\$ 0.45	\$ 0.96	\$ 0.54
Second Quarter	0.47	0.26	0.56	0.30
Third Quarter	0.38	0.22	0.44	0.27
Fourth Quarter	0.32	0.16	0.37	0.18
2004				
First Quarter	2.61	1.80	3.30	2.40
Second Quarter	2.11	1.25	2.76	1.72
Third Quarter	1.41	0.54	1.85	0.67
Fourth Quarter	1.05	0.60	1.25	0.72

We have not declared or paid cash dividends on our common shares since our inception and we expect for the foreseeable future to retain all of our earnings from operations for use in expanding and developing our business. Future dividend decisions will consider our then current business results, cash requirements and financial condition.

ITEM 6. SELECTED FINANCIAL DATA

The following table sets forth selected historical consolidated financial data for Apollo Gold Corporation (formerly Pursuit) as of December 31, 2005, 2004, 2003, 2002 and 2001, derived from our audited financial statements. The financial information for the year ended December 31, 2002 differs significantly from the financial information for prior years as a result of the June 2002 acquisition of Nevoro. Financial information for 2001 and prior years is the historical financial information of Pursuit. On June 25, 2002, Pursuit acquired Nevoro and its wholly-owned subsidiary Apollo Gold, Inc.; accordingly, the statement of operations of the Company for the year ended December 31, 2002, includes the results of Pursuit for the year ended December 31, 2002, and Nevoro for the period from June 25, 2002 through December 31, 2002. Subsequent to June 25, 2002, substantially all of the gold mining and exploration business conducted by the Company consists of the gold mining and exploration operations of Apollo. The data set forth below should be read in conjunction with, and is qualified in its entirety by reference to, our financial statements and notes thereto included elsewhere in this Annual Report Form 10-K and with "Management's Discussion and Analysis of Financial Condition and Results of Operations."

Summary of Financial Condition

Years Ended December 31,
(\$ U.S. dollars in thousands, except share data)

Summary Operational Statistics

	Year Ended December 31,		
	2005	2004	2003
Production Summary			
Gold ounces	44,099	33,743	44,124
Silver ounces	524,722	970,751	411,216
Lead pounds	10,428,061	10,064,265	10,843,184
Zinc pounds	22,380,136	26,222,805	21,792,452
Cash Cost Per Ounce			
Cash Operating Cost/oz	\$ 529.36	\$ 797.91	\$ 432.42
Total Cash Cost/oz	\$ 562.96	\$ 838.54	\$ 456.96
Total Production Cost/oz	\$ 617.77	\$ 913.43	\$ 595.66

The cash operating, total cash and total production costs are non-GAAP financial measures and are used by management to assess performance of individual operations as well as a comparison to other gold producers.

This information differs from measures of performance determined in accordance with Canadian and U.S. GAAP and should not be considered in isolation or a substitute for measures of performance prepared in accordance with GAAP. These measures are not necessarily indicative of operating profit or cash flow from operations as determined under GAAP and may not be comparable to similarly titled measures of other companies.

See Item 7 “Management’s Discussion and Analysis of Financial Condition and Results of Operations” for a reconciliation of these non-GAAP measures to our Statements of Operations.

ITEM 7. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion and analysis should be read in conjunction with the accompanying consolidated financial statements and related notes. The financial statements have been prepared in accordance with generally accepted accounting principles in Canada (“Canadian GAAP”). For a reconciliation to generally accepted accounting principles in the U.S. (“U.S. GAAP”), see Note 20 to the attached consolidated financial statements. Unless stated otherwise, all dollar amounts are reported in U.S. dollars.

In this Annual Report on Form 10-K, the terms “cash operating cost”, “total cash cost” and “total production cost” are non-GAAP financial measures and are used on a per ounce of gold sold basis. Cash operating cost is equivalent to direct operating cost for the period as found on the Consolidated Statements of Operations, less production royalties expenses and mining taxes but includes by-product credits for payable silver, lead and zinc production. Total cash cost is equivalent to cash operating cost plus production royalties and mining taxes. Total production cost is equivalent to total cash cost plus non-cash costs including depreciation and amortization.

The Montana Tunnels’ results of operations have been restated for all periods presented as at and for the year ended December 31, 2004 and earlier to reflect a change in accounting policy with respect to stripping costs (see Critical Accounting Policies below).

Additionally, certain of the comparative figures have been reclassified to conform with the 2005 presentation. In particular, the results of operations of the Florida Canyon Mine and the Standard Mine for all periods presented have been classified as discontinued operations (see Note 4 to our Consolidated Financial Statements) and therefore the table below reflects Montana Tunnels statistics only.

RECONCILIATION OF CASH OPERATING AND TOTAL PRODUCTION COSTS PER OUNCE

	Year Ended December 31,		
	2005	2004	2003
	(\$ in thousands, except per ounce data)		
Gold Ounces Sold	44,099	33,743	44,124
Direct Operating Costs	\$ 48,357	\$ 52,473	\$ 34,184
Less: Mining and Property Taxes	1,482	1,371	1,083
By-Product Credits	23,531	24,178	14,021
Cash Operating Cost	23,344	26,924	19,080
Cash Operating Cost per Ounce	529	798	432
Cash Operating Cost	23,344	26,924	19,080
Add: Mining and Property Taxes	1,482	1,371	1,083
Total Cash Cost	24,826	28,295	20,163
Total Cash Cost per Ounce	563	838	457
Total Cash Cost	24,826	28,295	20,163
Add: Depreciation & Amortization	2,417	2,527	6,120
Total Production Cost	27,243	30,822	26,283
Total Production Cost per Ounce	618	913	596

We have included cash operating cost, total cash cost and total production cost information to provide investors with information about the cost structure of our mining operations. We use this information for the same purpose and for monitoring the performance of our operations. This information differs from measures of performance determined in accordance with Canadian and U.S. GAAP and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with Canadian and U.S. GAAP. These measures are not necessarily indicative of operating profit or cash flow from operations as determined under GAAP and may not be comparable to similarly titled measures of other companies.

BACKGROUND AND RECENT DEVELOPMENTS

We are principally engaged in the exploration, development and mining of gold. We own and operate the Montana Tunnels mine, an open pit mine and mill, located near Helena, Montana, currently processing ore from stockpiled material and producing gold doré and lead-gold and zinc-gold concentrates. We have a development property, the Black Fox project, which is located near the township of Matheson in the Province of Ontario, Canada. We also own Mexican subsidiaries which own or have the right to acquire concessions of the Huizopa exploration property located in the Sierra Madre gold belt in Chihuahua, Mexico. We also own the Diamond Hill mine, currently under care and maintenance, also located in the state of Montana. In March 2006, the Company adopted a plan to dispose of Montana Tunnels Mining, Inc., which owns the Montana Tunnels and Diamond Hill mines.

On November 18, 2005, we sold our Nevada Assets to Jipangu Inc. ("Jipangu"), a Delaware corporation and wholly owned subsidiary of Jipangu International Inc., a Japanese corporation, for \$14.0 million. The Nevada Assets consisted of the Florida Canyon Mine, the Standard Mine, and four exploration properties. The Florida Canyon Mine is an open pit heap leach operation located in the State of Nevada; the Standard Mine is an open pit heap leach operation situated 8 kilometers south of the Florida Canyon Mine, which shares common facilities such as warehousing, administration and the gold recovery plant with the Florida Canyon Mine; and the four exploration properties are located near the Florida Canyon Mine.

Upon closing of the sale of the Nevada Assets on November 18, 2005, \$11.0 million of the \$14.0 million was deposited as substitute collateral for the Apollo \$8.73 million 12% Series 2004-B secured convertible debentures, which were previously secured by the Nevada Assets. In January 2006, after meeting certain conditions, Apollo replaced the \$11.0 million cash collateral with its Black Fox property as security for the convertible debentures, which resulted in additional funds being available to the Company.

In addition, we entered into a subscription agreement with Jipangu for a \$3.5 million private placement pursuant to which Jipangu purchased 11,650,000 equity units priced at Cdn\$0.35 per unit with each unit consisting of one of our common shares and 0.17167 of a warrant, with each whole warrant exercisable for two years at Cdn\$0.39 for one of our common shares. The private placement closed on January 26, 2006 .

In 2005, gold production of 44,099 ounces was lower than expected and total cash costs of \$563 per ounce were higher than expected, primarily due to the operational problems at the Montana Tunnels mine throughout the year. Open pit mining activity was suspended on October 21, 2005, for safety reasons due to increased wall activity on the eastern side of the open pit. With help from third party outside geotechnical consultants, we evaluated a number of different remediation options aimed at pit wall stabilization for the remaining life of the mine. Management reviewed the alternatives and believes the best alternative would require the removal of approximately 4.6 million tons of material, unloading the pit walls and stabilizing the ramp system. We estimated that this remediation effort would require approximately \$12 million. Since the open pit mine operations were suspended, the mill has been processing ore from stockpiled material and producing gold doré and lead-gold and zinc-gold concentrates. Although the mine is not cash positive, the revenue generated does pay for the variable cost of production and contributes to the fixed costs of the mine. On January 31, 2006, we gave a Workers Adjustment and Retraining Notification (“WARN”) Act Notice to all hourly and salaried Montana Tunnels, Inc. employees. The WARN Act requires companies to give employees 60 days’ notice prior to a plant shutdown or mass layoff. We now expect to postpone a mass layoff until late April 2006 as we continue to mill low grade stockpiled ore. In March 2006 the Company adopted a plan to dispose of the Montana Tunnels mine.

In 2005 and prior periods, we deferred or accrued stripping costs incurred during production, as appropriate, and charged these costs to operations on the basis of the estimated average stripping ratio for Montana Tunnels. Commencing in the second quarter of 2005, we changed our accounting policy with respect to stripping costs to be consistent with the consensus reached by the Emerging Issues Task Force (“EITF”), on the basis that the consensus results in a more reliable, relevant and consistent application of GAAP. This change has been applied retrospectively by restating prior periods.

During 2005, at Black Fox, 160 underground holes totaling 34,456 meters plus 51 surface holes totaling 9,813 meters were drilled, bringing the total number of underground holes to 370 (75,521 meters) and surface holes to 449 (135,712 meters) giving a total number of 819 holes (211,233 meters). Throughout 2005, we continued to work on obtaining permitting for a combined open pit and underground mine and an on site mill with a capacity of 1,500 tonnes per day. We expect to publish updated reserve estimates in April 2006 and a Canadian National Instrument 43-101 (“NI 43-101”) within 45 days of publishing the updated reserves. In addition, we expect to complete the feasibility study by the end of 2006.

BUSINESS STRATEGY AND DEVELOPMENT

2006 Forecasted Highlights:

Following the sale of the Nevada Assets, we have three remaining properties: the Montana Tunnels mine, the Black Fox project and the Huizopa project. Below is a summary of our expectations for these three properties in 2006.

Montana Tunnels mine - Open pit mining activity was suspended on October 21, 2005. Currently the mill continues to operate, processing low grade stockpiled ore and is expected to continue milling through the end of April 2006. In March 2006 we adopted a plan to dispose of Montana Tunnels Mining, Inc., which owns the Montana Tunnels and Diamond Hill mines.

Black Fox project - The Company's focus is on developing our Black Fox project. We expect to publish updated reserves in April 2006 and issue an NI 43-101 report within 45 days of publishing the reserves, showing both open pit and underground reserves. We expect that the NI 43-101 report will reflect an increase from the 2004 reserves previously reported. We also expect to complete a feasibility study by the end of 2006. Estimated expenditures at Black Fox for 2006 are \$3.1 million. Additionally, we will continue to evaluate financing opportunities in order to extend the drilling program at Black Fox given that the mineralization is still open along strike and at depth.

Huizopa project - During 2006, our focus at Huizopa will be to advance the exploration phase of the project. Specifically, we expect to continue mapping, trenching, sampling and conducting geophysical studies on the property including the selection of several primary targets for drill sites and the commencement of a drilling program. The cost of the project is expected to be approximately \$2.3 million for the year 2006.

APOLLO GOLD CORPORATION

Results of Operations Year Ended December 31, 2005 Compared to Year Ended December 31, 2004

Revenue from the Sale of Minerals from Continuing Operations (Montana Tunnels).

Revenues from continuing operations for the year ended December 31, 2005 increased 13.1% to \$43.3 million from \$38.3 million for the year ended December 31, 2004, primarily due to higher gold production at Montana Tunnels and higher metals prices.

Revenues from gold for the year ended December 31, 2005 increased 40.1% to \$19.7 million from \$14.1 million for the year ended December 31, 2004. The average price received for gold for the years ended December 31, 2005 and 2004 was \$447 and \$417 per ounce, respectively.

Revenues from silver, zinc and lead for the year ended December 31, 2005 decreased 2.7% to \$23.5 million from \$24.2 million during 2004.

For the year ended December 31, 2005, 46% of our revenue was derived from sales of gold and 54% from sales of silver, zinc and lead, compared to 37% from sales of gold and 63% from sales of silver, zinc and lead for 2004.

Gold production increased 30.7% to 44,099 ounces for the year ended December 31, 2005 from 33,743 ounces in 2004. Most of this production was derived from modeled and unmodeled “fringe” ores mined from the open pit through October 2005. As a result of pit wall instability, open pit mining operations were suspended mid October 2005 and subsequent metal production was from processing lower grade stockpiled ore. See Item 2 “Description of Properties - Montana Tunnels Mine” for further information.

Operating Expenses.

Direct Operating Costs. Direct operating costs for the year ended December 31, 2005 decreased 7.8% to \$48.4 million from \$52.5 million for the year ended December 31, 2004, primarily due to moving 62% more tons of waste and ore in 2004 than in 2005. These amounts include mining and processing costs, as well as smelting and refining charges. Total cash cost per ounce for the year ended December 31, 2005 decreased 36.9% to \$563 from \$838 for the year ended December 31, 2004. Although the total cash cost per ounce was lower than in 2004, it was higher than expected due to remediation expenses related to pit wall instability throughout the year, which eventually led to the suspension of mining in the open pit in mid October 2005. Additionally, higher fuel, energy and commodity prices contributed to the higher than expected costs, with fuel prices peaking at \$2.56 per gallon during 2005.

Depreciation and Amortization. Depreciation and amortization expenses remained at \$2.6 million for the year ended December 31, 2005, the same as in 2004.

General and Administrative Expenses. General and administrative expenses for the year ended December 31, 2005 increased 6.9% to \$7.6 million from \$7.1 million for the year ended December 31, 2004, primarily due to increased legal and accounting expenses incurred in connection with our financing transactions, exchange listing fees, the cost of our Sarbanes-Oxley efforts for the year, as well as the accrual for the costs related to the severance paid to the four departed executive officers and to the amended agreements of the three remaining officers.

Stock-based Compensation. In the year ended December 31, 2005, we also incurred stock-based compensation of \$597,000 resulting from the issuance of stock options to our employees. This compares to \$767,000 in 2004.

Accretion Expense. In the year ended December 31, 2005, we accrued accretion expense of \$0.9 million, relating to accrued site closure costs at our Montana Tunnels mine as compared to \$0.8 million in 2004.

Exploration and Business Development. The cost of exploration, consisting of drilling and related expenses, totaled \$0.9 million and \$1.1 million for the years ended December 31, 2005 and 2004, respectively. Costs incurred at Black Fox for drilling and development were capitalized under Canadian GAAP.

Total Operating Expenses. As a result of these expense components, our operating expenses for the year ended December 31, 2005 decreased 6.1% to \$60.9 million from \$64.8 million for the year ended December 31, 2004, primarily due to a decrease in costs during the fourth quarter 2005 as a result of suspending open pit mining at Montana Tunnels in October 2005. The decrease in operating expenses were partially offset by increased general and administrative expenses.

Interest Income and Interest Expense. We realized interest income of \$397,000 during the year ended December 31, 2005 compared with \$313,000 for the year ended December 31, 2004. We incurred interest expense of \$2,533,000 during 2005 and \$252,000 during 2004. The increase in interest expense is due to accretion on the convertible debentures, which were issued in November of 2004.

Foreign Exchange (Loss/Gain). We realized foreign exchange losses of \$35,000 and \$770,000 during the years ended 2005 and 2004, respectively, from cash balances not held in United States dollars. This decrease is a result of having lower cash balances in Canadian dollars in 2005 than in 2004.

Loss from Continuing Operations.

Loss from continuing operations for the year ended December 31, 2005 decreased 41.5% to \$16.0 million from \$27.3 million in 2004. The main factors contributing to the loss were the lower than expected revenues as a result of the mining problems related to the wall instability and the higher costs of commodities such as fuel, energy and tires. The decreased loss in 2005 compared to 2004 was due to the high cost of mining in 2004 as a result of moving 34 million tons of waste and ore compared to 21 million tons in 2005.

Loss from Discontinued Operations.

On November 18, 2005, the Company sold its Nevada Assets to Jipangu. The Nevada Assets were therefore classified as discontinued operations. We incurred a loss from these discontinued operations of \$6.2 million for the year ended December 31, 2005 as compared to a loss of \$3.7 million for 2004.

Net Loss for the Year.

Based on these factors, we incurred a net loss of \$22.2 million, or \$0.22 per share, for the year ended December 31, 2005, as compared to a loss of \$31.0 million, or \$0.39 per share, for the year ended December 31, 2004.

Results of Operations

Year Ended December 31, 2004 Compared to Year Ended December 31, 2003

Revenue from the Sale of Minerals from Continuing Operations. (Montana Tunnels)

Revenues from continuing operations for the year ended December 31, 2004 increased 24.0% to \$38.3 million from \$30.9 million for the year ended December 31, 2003, primarily due to higher metal prices offset by lower production due to lower milling grades at Montana Tunnels.

Revenues for gold for the year ended December 31, 2004 decreased 16.4% to \$14.1 million from \$16.8 million in 2003. The average price received for gold for the years ended December 31, 2004 and 2003 was \$417 and \$382 per ounce, respectively. The increase revenue from higher metal prices was offset by lower ounces of gold being sold in 2004.

Gold production for the year ended December 31, 2004 decreased 23.5% to 33,743 ounces from 44,124 ounces for the year ended December 31, 2003, primarily due to lower milling grades at Montana Tunnels, which reduced our gold and total metal production.

Revenues for silver, zinc and lead for the year ended December 31, 2004 increased 72.4% to \$24.2 million from \$14.0 million in 2003.

For the year ended December 31, 2004, approximately 37% of our revenue was derived from sales of gold and 63% was derived from sales of silver, zinc and lead, compared to 55% derived from sales of gold and 45% derived from sales of silver, zinc and lead for the year ended December 31, 2003.

Operating Expenses.

Direct Operating Costs. Direct operating costs for the year ended December 31, 2004 increased 53.5% to \$52.5 million from \$34.2 million for the year ended December 31, 2003. These amounts include mining and processing costs, as well as smelting and refining charges. The higher direct operating costs in 2004 reflect higher fuel and commodity prices and a full operational year at Montana Tunnels.

Depreciation and Amortization. Depreciation and amortization expenses for the year ended December 31, 2004 decreased 57.0% to \$2.6 million from \$6.1 million for 2003, primarily due to amortization of stripping costs.

General and Administrative Expenses. General and administrative expenses for the year ended December 31, 2004 increased 52.5% to \$7.1 million from \$4.7 million in 2003, primarily due to an increase in legal and accounting expenses, incurred in connection with our financing transactions, exchange listing fees and costs related to Sarbanes-Oxley compliance.

Stock-based Compensation. For the year ended December 31, 2004, stock-based compensation increased 104.0% to \$767,000 from \$376,000 for the year ended December 31, 2003, primarily due to an increase in the number of stock options granted to our employees.

Accretion Expense. Accrued accretion expense for the year ended December 31, 2004 increased 64.0% to \$820,000 from \$500,000, primarily due to accrued site closure costs at our Montana Tunnels mine. This expense represents our estimation of the fair value of the increase in our site closure and reclamation costs, which we updated in the last quarter of 2004.

Exploration and Business Development. Exploration and development, consisting of drilling and related expenses, for the year ended December 31, 2004 decreased 50.4% to \$1.1 million from \$2.1 million for the year ended December 31, 2003.

Total Operating Expenses. As a result of these expense components, our operating expenses for the year ended December 31, 2004 increased 35.2% to \$64.8 million from \$48.0 million for the year ended December 31, 2003.

Interest Income and Interest Expense. We realized interest income of \$313,000 during the year ended December 31, 2004. We incurred interest expense of \$252,000 in 2004, primarily for equipment leases and a bridge loan. We realized interest income in 2003 of \$213,000 and interest expense of \$205,000.

Foreign Exchange (Loss/Gain). We realized foreign exchange losses of \$0.8 million in 2004, but a gain of \$1.3 million in 2003, from cash balances not held in United States dollars.

Loss from Continuing Operations.

Loss from continuing operations for the year ended December 31, 2004 increased 72.9% to \$27.3 million from \$15.8 million for the year ended December 31, 2003, mainly as a result of the higher stripping ratio at Montana Tunnels combined with the higher costs of fuel, tires and other related commodities.

Loss from Discontinued Operations.

Revenues from the Florida Canyon mine for the year ended December 31, 2004 decreased 26.4% to \$26.5 million from \$36.0 million for the year ended December 31, 2003. Gold production at the Florida Canyon mine for the year ended December 31, 2004 decreased 28.2% to 73,082 ounces from 101,811 ounces for the year ended December 31, 2003, primarily due to the curtailment of mining activities in August 2004. Discontinued operations incurred a loss of \$3.7 million for the year ended December 31, 2004 as compared to income of \$1.7 million for the year ended

December 31, 2003.

- 51 -

Net Loss for the Year.

Based on these factors, we incurred a net loss of \$31.0 million, or \$0.39 per share, for the year ended December 31, 2004, as compared to a net loss of \$14.1 million, or \$0.26 per share, for the year ended December 31, 2003.

Summary of Quarterly Results (Unaudited)

	2005 Quarter Ended In				2004 Quarter Ended In			
	Dec(1)	Sept(2)	June(3)	March(4)	Dec(5)	Sept(6)	June(7)	March
	(\$ in thousands, except per share and total cash cost per ounce data)							
Revenue from the sale of minerals from continuing operations	\$ 6,990	\$ 13,351	\$ 10,581	\$ 12,332	\$ 12,712	\$ 7,393	\$ 6,525	\$ 11,624
Operating loss	(5,999)	(2,935)	(4,538)	(4,166)	(4,266)	(8,377)	(9,317)	(4,632)
Loss from continuing operations for the period	(3,955)	(3,614)	(4,961)	(3,431)	(4,550)	(8,476)	(9,553)	(4,716)
Loss from continuing operations per share, basic and diluted	(0.04)	(0.04)	(0.05)	(0.04)	(0.06)	(0.11)	(0.12)	(0.06)
Gold production in ounces -								
Montana Tunnels	5,026	14,104	12,324	12,645	12,090	4,967	5,903	10,783
Total cash cost per ounce -								
Montana Tunnels	\$ 762	\$ 513	\$ 590	\$ 472	\$ 446	\$ 1,465	\$ 1,548	\$ 604

(1) Open pit mining suspended in mid October. Continued milling low grade ore stockpiles.

(2) Milled tonnage was reduced due to ramp problems and a mill two-week shutdown in July.

(3) Production delays due to periodic ramp closures caused by excessive rainfall.

(4) Severe weather and unusually low water level in the tailings dam caused lower than expected tonnage throughput.

(5) Milling throughput at Montana Tunnels was 17,500 tons per day.

(6) Montana Tunnels mine continued to operate in the transition zone between mineralization and the actual ore reserve.

(7) Milling capacity increased to 15,000 tons per day.

Financial Condition and Liquidity

To date, we have funded our operations primarily through issuances of debt and equity securities, the sale of the Nevada Assets and sale of surplus assets. At December 31, 2005, we had cash of \$0.1 million, compared to cash and short-term investments of \$6.9 million at December 31, 2004. The decrease in cash from December 31, 2004 is primarily the result of operating cash outflows of \$11.3 million and investing activities of \$1.4 million. The cash outflows were offset in part by proceeds of \$5.9 million from sales of our common shares. At March 1, 2006, we had cash and short-term investments of \$7.5 million, which includes the \$11.0 million released in January 2006 from the restricted cash account held at December 31, 2005 as collateral security for the convertible debenture and the \$3.5 million private placement by Jipangu in January 2006, less the payments of \$2.6 million made to the lien holders of Black Fox as per Note 15(d) of the attached "Notes to Consolidated Financial Statements".

In 2005, cash provided by investing activities totaled \$1.4 million. Proceeds from the sale of the Nevada Assets were \$14.0 million, proceeds from the sale of spare property, plant and equipment added a further \$4.5 million and discontinued operations an additional \$1.0 million. Capital expenditures were \$5.5 million, of which \$5.3 million were for the further development of the Black Fox project. In addition, \$12.7 million was held as restricted cash, \$1.7 million of which was for the Montana Tunnels reclamation liability and the balance of \$11.0 million as cash collateral security for the \$8.8 million convertible debentures. Restricted cash of \$11.0 million was released January 2006. For further details, see Note 21 of the "Notes to the Consolidated Financial Statements".

- 52 -

During the year ended December 31, 2005, financing activities provided \$3.2 million in cash, from (a) completing in January 2005 the second tranche of a registered offering of 4,199,998 units with an issue price of \$0.75 for proceeds of \$2.8 million, net of expenses of \$0.3 million and fair value of broker's compensation warrants of \$0.2 million and (b) completing in June, 2005, the sale to Jipangu of 10,000,000 common shares at \$0.32 per share, proceeds from which amounted to \$3.2 million, net of expenses of \$32,000. During 2005, \$0.8 million in equipment leases were paid off and discontinued operations accounted for a further cash outflow of \$2.0 million mainly in the form of payment of equipment leases prior to the sale of the Nevada Assets to Jipangu.

Our current funds are not sufficient to fund our projected 2006 expenditures of \$3.1 million at Black Fox and \$2.3 million for exploration at Huizopa, as well as the Montana Tunnels mine. In March 2006, the Company adopted a plan to sell Montana Tunnels Mining, Inc., which owns the Montana Tunnels and Diamond Hill mines, the proceeds from which, together with our cash on hand, would provide us with sufficient liquidity to complete all planned activities for 2006. If we do not sell Montana Tunnels Mining, Inc., we expect to seek alternative financing solutions, which may include entering into a joint venture with respect to the mine, selling debt or equity securities, or selling the Montana Tunnels assets. Sales of debt or equity securities may include Canadian flow-through financing to further fund a portion of our Black Fox exploration activities.

Our ability to raise capital is highly dependent upon the commercial viability of our projects and the associated prices of the metals we produce. Because of the significant impact that changes in the prices of gold and silver have on our financial condition, declines in these metals prices may negatively impact short-term liquidity and our ability to raise additional funding for long-term projects. In the event that cash balances decline to a level that cannot support our operations, our management will defer certain planned capital expenditures and exploration activities as needed to conserve cash for operations. There can be no assurance that we will be successful in generating adequate funding for planned capital expenditures, environmental remediation and reclamation expenditures and for exploration expenditures.

however, it is possible that our obligation may change in the near or long term depending on a number of factors.

CRITICAL ACCOUNTING POLICIES

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make a variety of estimates and assumptions that affect (i) the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the financial statements and (ii) the reported amounts of revenues and expenses during the reporting periods covered by the financial statements.

- 54 -

Our management routinely makes judgments and estimates about the effect of matters that are inherently uncertain. As the number of variables and assumptions affecting the future resolution of the uncertainties increase, these judgments become even more subjective and complex. We have identified certain accounting policies that we believe are most important to the portrayal of our current financial condition and results of operations. Our significant accounting policies are disclosed in Note 3 to the Consolidated Financial Statements included in this Annual Report on Form 10-K.

Revenue Recognition

Sales of metals products sold directly to smelters are recorded when title and risk of loss transfer to the smelter at current spot metals prices. We must estimate the price at which our metals will be sold in reporting our profitability and cash flow. Recorded values are adjusted monthly until final settlement. Sales of metal in products tolled, rather than sold to smelters, are recorded at contractual amounts when title and risk of loss transfer to the buyer.

Stripping Costs

On March 30, 2005, the Financial Accounting Standard Board (“FASB”) ratified the consensus of the Emerging Issues Task Force (“EITF”) Issue 04-06 that stripping costs incurred during the production phase of a mine are variable production costs that should be included in the costs of the inventory produced during the period that the stripping costs are incurred.

In 2004 and prior periods, Apollo deferred or accrued stripping costs incurred during production, as appropriate, and charged these costs to operations on the basis of the estimated average stripping ratio for Montana Tunnels. Commencing in the second quarter of 2005, Apollo changed its accounting policy under Canadian GAAP and U.S. GAAP with respect to stripping costs to be consistent with the consensus reached by the EITF, on the basis that the consensus results in a more reliable, relevant and consistent application of GAAP. This change has been applied retrospectively by restating prior periods. The effect of this change was to increase the deficit at January 1, 2003 by \$12,129,000 and to increase the net loss for the years ended December 31, 2004 and 2003 by \$12,818,000 (\$0.16 per share) and \$11,904,000 (\$0.22 per share), respectively.

Depreciation and Depletion

Depreciation is based on the estimated useful lives of the assets and is computed using straight-line and unit-of-production methods. Depletion is computed using the unit-of-production method. The units-of-production method under Canadian GAAP is based on proven and probable ore reserves and a portion of resources expected to be converted to reserves based on past results. As discussed above, our estimates of proven and probable ore reserves and resources may change, possibly in the near term, resulting in changes to depreciation, depletion and amortization.

Impairment of Long-Lived Assets

We review the net carrying value of all facilities, including idle facilities, on a periodic basis. We estimate the net realizable value of each property based on the estimated undiscounted future cash flows that will be generated from operations at each property, the estimated salvage value of the surface plant and equipment and the value associated with property interests. These estimates of undiscounted future cash flows are dependent upon the estimates of metal to be recovered from proven and probable ore reserves and mineral resources expected to be converted into mineral reserves (see discussion above), future production cost estimates and future metals price estimates over the estimated remaining mine life. If undiscounted cash flows are less than the carrying value of a property, an impairment loss is recognized based upon the estimated expected future cash flows from the property discounted at an interest rate commensurate with the risk involved.

Environmental Matters

When it is probable that costs associated with environmental remediation obligations will be incurred and they are reasonably estimable, we accrue such costs at the most likely estimate. Accruals for estimated losses from environmental remediation obligations generally are recognized no later than completion of the remedial feasibility study for such facility and are charged to provisions for closed operations and environmental matters. We periodically review our accrued liabilities for such remediation costs as evidence becomes available indicating that our remediation liability has potentially changed. Costs of future expenditures for environmental remediation are not discounted to their present value unless subject to a contractually obligated fixed payment schedule. Such costs are based on our current estimate of amounts that are expected to be incurred when the remediation work is performed within current laws and regulations. Recoveries of environmental remediation costs from other parties are recorded as assets when their receipt is deemed probable.

RELATED PARTY TRANSACTIONS

The Company had the following related party transactions for the three years ended December 31, 2005, 2004 and 2003, respectively.

	2005	2004	2003
		(Thousands)	
Legal fees paid to two law firms, a partner of each firm is a director of the Company	\$ 335	\$ 549	\$ 795
Consulting services paid to a relative of an officer and director of the Company	18	6	64

These transactions are in the normal course of business and are measured at the exchange amount which is the consideration established and agreed to by the related parties.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Our exposure to market risk includes, but is not limited to, the following risks: changes in interest rates on our investment portfolio, changes in foreign currency exchange rates and commodity price fluctuations.

Interest Rate Risk

We currently have minimal debt and thus no material interest rate exposure related to debt. When appropriate, we invest excess cash in short-term debt instruments of the U.S. and Canadian governments and their agencies on a fixed interest rate basis. Over time, the rates received on such investments may fluctuate with changes in economic conditions. As a result, our investment income may fall short of expectations during periods of lower interest rates. We estimate that given the cash balances expected during 2006, a one percent change in interest rates would result in a \$100,000 change in interest income. We may in the future actively manage our exposure to interest rate risk.

Foreign Currency Exchange Rate Risk

The price of gold is denominated in U.S. dollars and the majority of our revenues and expenses are denominated in U.S. dollars. To the extent there are fluctuations in local currency exchange rates against the dollar, the devaluation of a local currency is generally economically neutral or beneficial to the operation because local salaries and supplies will decrease against the U.S. dollar revenue stream.

Commodity Price Risk

We are engaged in gold mining and related activities, including exploration, extraction, processing and reclamation. Gold is our primary product and, as a result, changes in the price of gold could significantly affect our results of operations and cash flows. We have in the past purchased puts/calls and we may in the future more actively manage our exposure through hedging programs.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

The following Consolidated Financial Statements of Apollo Gold Corporation, Report of Independent Registered Chartered Accountants, and Comments by Independent Registered Chartered Accountants on Canada-United States of America Reporting Differences are filed as part of this Item 8 and are included in this Form 10-K.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

There have been no disagreements with Deloitte & Touche LLP, our independent registered chartered accountants, regarding any matter of accounting principles or practices or financial statement disclosure.

ITEM 9A. CONTROLS AND PROCEDURES

Disclosure Controls and Procedures

Apollo maintains disclosure controls and procedures that are designed to ensure that information required to be disclosed in the reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms, and that such information is accumulated and communicated to Apollo's management, including its Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required financial disclosure.

As of the end of the period covered by this report, we carried out an evaluation, under the supervision of our management, including the Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of our disclosure controls and procedures pursuant to Exchange Act Rule 13a-15(b) under the Exchange Act. Based upon, and as of the date of this evaluation, the Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures were not effective, because of the material weaknesses discussed below. In light of the material weaknesses described below, we performed additional analysis and other post-closing procedures to ensure our consolidated financial statements were prepared in accordance with generally accepted accounting principles. Accordingly, management believes that the financial statements included in this report fairly present in all material respects our financial condition, results of operations and cash flows for the periods presented.

We identified a material weakness for the year ended December 31, 2004. A material weakness is a significant deficiency, or combination of significant deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected. We lacked appropriate review of non-routine or complex accounting matters, related accounting entries, and appropriate documentation, disclosure and application of Canadian and U.S. GAAP, primarily due to a lack of sufficient personnel with a level of technical accounting expertise commensurate with our reporting requirements.

The following actions were taken in 2005 to remediate this material weakness. We established a Financial Disclosure Policy Committee to review all non-routine accounting matters and disclosure and application of Canadian and U.S. GAAP. We added additional technical accounting expertise to the accounting staff. We implemented formal policies addressing the internal controls over non-routine or complex accounting matters, accounting entries, appropriate documentation, and disclosures. However, in January 2006 a major restructuring and streamlining at the corporate office significantly changed the design and structure of the internal controls and procedures at the corporate level. As of this date our management has not had sufficient time to evaluate these controls and therefore believes this material weakness still exists.

Changes in Internal Control

Related to the reduction in staffing at the Montana Tunnels mine in mid October 2005, our controls at that location are not operating as previously designed related to segregation of duties over procurement, inventory control and accounting duties. Corporate management has increased its involvement with day-to-day oversight and management of the Montana Tunnels mine, but as of this date, management has not had sufficient time to evaluate these controls and therefore believe the change in controls is significant enough to be reported as a material weakness. In an effort to address this material weakness, staffing requirements and other changes in control are being evaluated as the future operational requirements of the Montana Tunnels mine is being determined.

We intend to continue to monitor our internal controls, and if further improvements or enhancements are identified, we will take steps to implement such improvements or enhancements. As a result of the changes disclosed above, there were changes in our internal control over financial reporting, which have materially affected, or are reasonably likely to materially affect, such internal controls.

Sarbanes-Oxley Act Section 404 Internal Control Reporting Requirements

As a result of the issuance of the SEC's Release No 33-8644, "Revisions to Accelerated Filer Definition and Accelerated Deadlines for Filing Periodic Reports" the Company exited accelerated filer status for its year ended December 31, 2005. As a non-accelerated filer, compliance with the internal control reporting requirements of Section 404 of the Sarbanes-Oxley Act of 2002 have been deferred and we may be subject to the requirements in our Annual Report on Form 10-K for fiscal year 2006 and will be for fiscal year 2007.

ITEM 9B. OTHER INFORMATION

None.

- 58 -

PART III

ITEM 10. DIRECTORS AND EXECUTIVE OFFICERS OF THE REGISTRANT

Information regarding directors of Apollo is incorporated by reference to the section entitled “Proposal #1 - Election of Directors” in our definitive proxy statement to be filed with the Securities and Exchange Commission pursuant to Regulation 14A in connection with the 2006 annual meeting of shareholders (the “Proxy Statement”). Reference is made to the information set forth under the section entitled “Executive Officers” in the Proxy Statement which information is incorporated by reference in this Annual Report on Form 10-K.

ITEM 11. EXECUTIVE COMPENSATION

Reference is made to the information set forth under the section entitled “Compensation Table for Named Executive Officers” in the Proxy Statement, which information is incorporated by reference in this Annual Report on Form 10-K.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT

Reference is made to the information set forth under the section entitled “Beneficial Ownership Table” in the Proxy Statement, which information is incorporated by reference in this Annual Report on Form 10-K.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS

Reference is made to the information contained under the section entitled “Interests of Insiders and Others in Material Transactions” contained in the Proxy Statement, which information is incorporated by reference in this Annual Report on Form 10-K.

ITEM 14. PRINCIPAL ACCOUNTANT FEES AND SERVICES

Reference is made to the information contained under the section entitled “Report of the Audit and Finance Committee” contained in the Proxy Statement, which information is incorporated by reference in this Annual Report on Form 10-K.

PART IV

ITEM 15. EXHIBITS, FINANCIAL STATEMENT SCHEDULES AND REPORTS ON FORM 8-K

(a) Documents filed as part of this Annual Report on Form 10-K or incorporated by reference:

(1) Our consolidated financial statements are listed on the “Index to Financial Statements” on Page F-1 to this report.

(2) Financial Statement Schedules (omitted because they are either not required, are not applicable, or the required information is disclosed in the Notes to the Consolidated Financial Statements or related notes).

(3) The following exhibits are filed with this Annual Report on Form 10-K or incorporated by reference.

- 61 -

Exhibit No.	Exhibit Name

REPORT OF INDEPENDENT REGISTERED CHARTERED ACCOUNTANTS

To the Shareholders of
Apollo Gold Corporation

We have audited the consolidated balance sheets of Apollo Gold Corporation (the “Company”) as at December 31, 2005 and 2004, and the consolidated statements of operations, shareholders’ equity, and cash flows for each of the years in the three year period ended December 31, 2005. These financial statements are the responsibility of the Company’s management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (United States). These standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2005 and 2004, and the results of its operations and its cash flows for each of the years in the three year period ended December 31, 2005 in accordance with Canadian generally accepted accounting principles.

The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company’s internal control over financial reporting. Accordingly, we express no such opinion.

COMMENTS BY INDEPENDENT REGISTERED CHARTERED ACCOUNTANTS ON CANADA-UNITED STATES OF AMERICA REPORTING DIFFERENCES

The standards of the Public Company Accounting Oversight Board (United States) require the addition of an explanatory paragraph when the financial statements are affected by conditions and events that cast substantial doubt on the Company's ability to continue as a going concern, such as those described in Note 1 to the consolidated financial statements. Although we conducted our audits in accordance with both Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (United States), our report to the shareholders dated March 30, 2006 is expressed in accordance with Canadian reporting standards which do not permit a reference to such conditions and events in the report of the independent registered chartered accountants when these are adequately disclosed in the consolidated financial statements.

The standards of the Public Company Accounting Oversight Board (United States) require the addition of an explanatory paragraph (following the opinion paragraph) when there are changes in accounting principles that have a material effect on the comparability of the Company's consolidated financial statements, such as the change described in Note 3 (h) to the consolidated financial statements. Our report to the shareholders, dated March 30, 2006, is expressed in accordance with Canadian reporting standards which do not require a reference to such changes in accounting principles in the report of the independent registered chartered accountants when the change is properly accounted for and adequately disclosed in the consolidated financial statements.

During the year ended December 31, 2005 the Company issued 1,000,000 shares to Argonaut Mines LLC (“Argonaut”) in connection with the increase of the Huizopa interest in Mexico. Share capital and property, plant and equipment both increased by \$410 as a result of this transaction. Also, holders of the convertible debentures converted \$25 face value for common shares. The convertible debenture decreased by \$17, share capital increased by \$23 and equity component of convertible debentures decreased by \$6 as a result of this conversion. Additionally, the Company issued 1,250,000 shares and 1,250,000 warrants as broker compensation related to the disposition of the discontinued operations, resulting in an increase in share capital of \$297 and contributed surplus of \$143 and selling expenses of \$440.

During the years ended December 31, 2005, 2004 and 2003, property, plant and equipment totaling \$211, \$19 and \$1,500, respectively, was acquired under capital lease obligations.

During the year ended December 31, 2004, the Company issued 48,978 shares to meet the earn-in requirements of the Huizopa joint venture agreement. Share capital and property, plant and equipment both increased by \$88 as a result of this transaction. Property, plant and equipment totaling \$340 was acquired under a capital lease arrangement.

During the year ended December 31, 2003, the Company issued 61,500 shares to acquire certain parcels of land located in Nevada. Share capital and property, plant and equipment both increased by \$134 as a result of this transaction.

The accompanying notes are an integral part of these consolidated financial statements.

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements

Years ended December 31, 2005, 2004 and 2003

(stated in United States dollars; tabular amounts in thousands)

1. CONTINUING OPERATIONS

These consolidated financial statements are prepared on the basis of a going concern which assumes that Apollo Gold Corporation ("Apollo" or the "Company") will realize its assets and discharge its liabilities in the normal course of business for the foreseeable future. To date the Company has funded its operations through issuance of debt and equity securities, the sale of the Nevada assets plus the sale of other surplus assets. The Company's ability to continue as a going concern is dependent on its ability to generate cash flow from the sale of Montana Tunnels and/or continue to issue debt and equity securities.

At the Montana Tunnels mine open pit mining was suspended on October 21, 2005. Currently the mill continues to operate, processing low grade stockpiled ore and is expected to continue milling through the end of April 2006. In March 2006, the Company adopted a plan to dispose of Montana Tunnels Mining Inc., which owns the Montana Tunnels and Diamond Hill mines.

The Company estimates that with its year end cash balance, plus the \$11.0 million released in January 2006 from the restricted cash account held at December 31, 2005 as collateral security for the convertible debenture and the \$3.5 million private placement by Jipangu Inc. ("Jipangu") in January 2006, it will not have sufficient funds to finance the current work programs at the Black Fox Project and the Huizopa exploration project (the "Huizopa Project"), as well as corporate overhead. Therefore, the Company is exploring financing opportunities to further develop and construct the Black Fox Project and continue our exploration program at the Huizopa Project. In addition, Apollo may raise funds from the sale of debt or equity securities which may include Canadian flow-through financing to further fund a portion of its Canadian exploration activities. The availability, amount, terms and timing of this financing are not certain at this time.

If the Company is unable to sell the Montana Tunnels mine or secure additional financing and therefore be unable to continue as a going concern, then material adjustments would be required to the carrying value of assets and liabilities and balance sheet classifications used.

2. NATURE OF OPERATIONS

Apollo is engaged in gold mining including extraction, processing refining and the production of other co-product metals, as well as related activities including exploration and development. The Company currently owns and operates the Montana Tunnels mine, an open pit mine and mill, producing gold doré and lead-gold and zinc-gold concentrates, located in the State of Montana. Mining in the open pit was suspended in mid October due to pit wall instability. Since the open pit mine operations were suspended, the mill has been processing lead-gold and concentrates from low grade ore stockpiles. The Company also owns the Diamond Hill Mine, currently under care and maintenance, also located in the State of Montana. In March 2006 the Company held out the Montana Tunnels mine for sale, which includes the Diamond Hill mine.

Apollo has a development property, the Black Fox Project, which is located near the Township of Matheson in the Province of Ontario, Canada. Apollo also owns Mexican subsidiaries which own or have the right to acquire

concessions at the Huizopa Project, located in the Sierra Madre gold belt in Chihuahua, Mexico.

F-8

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

3. SIGNIFICANT ACCOUNTING POLICIES

The consolidated financial statements of Apollo are prepared by management in accordance with Canadian generally accepted accounting principles (“Canadian GAAP”) and except as described in Note 20, conform in all material respects with accounting principles generally accepted in the United States (“U.S. GAAP”). The principal accounting policies followed by the Company, which have been consistently applied, are summarized as follows:

(a) Principles of consolidation

The financial statements of entities which are controlled by the Company through voting equity interests, referred to as subsidiaries, are consolidated. All intercompany balances and transactions are eliminated upon consolidation. Variable Interest Entities (“VIEs”), which include, but are not limited to, special purpose entities, trusts, partnerships, and other legal structure, as defined by the Accounting Standards Board in Accounting Guideline (“AcG”) 15, “Consolidation of Variable Interest Entities” (“AcG-15”), are entities in which equity investors do not have the characteristics of a “controlling financial interest” or there is not sufficient equity at risk for the entity to finance its activities without additional subordinated financial support. VIEs are subject to consolidation by the primary beneficiary who will absorb the majority of the entities’ expected losses and/or expected residual returns. The Company did not hold any Variable Interest Entities as at December 31, 2005.

(b) Measurement uncertainties

The preparation of financial statements in conformity with Canadian GAAP requires the Company’s management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements. Significant estimates used herein include those relating to gold and other metal prices, recoverable proven and probable reserves, available resources, available operating capital and required reclamation costs. These estimates each affect management’s evaluation of asset impairment and the recorded balances of property, plant and equipment, reclamation and site closure costs and the future tax asset valuation allowance. It is reasonably possible that actual results could differ in the near term from those and other estimates used in preparing these financial statements and such differences could be material.

(c) Foreign currency transactions

Transactions denominated in Canadian dollars have been translated into U.S. dollars at the approximate rate of exchange prevailing at the time of the transaction. Monetary assets and liabilities denominated in foreign currencies have been translated into U.S. dollars at the year-end exchange rate. Exchange gains and losses are included in operating results.

(d) Cash and cash equivalents

Cash and cash equivalents are comprised of cash, term deposits and treasury bills. The original maturity dates of term deposits and treasury bills is not in excess of 90 days.

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

(e) Inventories

Metals inventories are stated at the lower of cost and net realizable value determined by using the first-in, first-out method. Materials and supplies at the mine sites are valued at the lower of direct cost of acquisition and replacement cost.

(f) Property, plant and equipment

Mine development costs are capitalized after proven and probable reserves have been identified. Amortization is calculated using the units-of-production method over the expected life of the operation based on the estimated recoverable gold equivalent ounces or value of metals over proven and probable reserves and a portion of resources expected to be converted to reserves based on past results.

Buildings and equipment are recorded at acquisition cost and amortized over the remaining reserves of the mine site on a units-of-production basis. Equipment that is mobile is amortized on a straight-line basis over the estimated useful life of the equipment of five to ten years. Costs relating to repair and maintenance costs are expensed as incurred.

Financing and acquisition costs including interest and fees are capitalized on the basis of expenditures incurred for the acquisition of assets and mineralized properties and related development activities. Capitalization ceases when the asset or property is substantially complete and ready to produce at commercial rates.

(g) Mineral rights

Mineral rights include the cost of obtaining unpatented and patented United States of America mining claims and the cost of acquisition of properties. Significant payments related to the acquisition of land and mineral rights are capitalized. If a mineable ore body is discovered, such costs are amortized when production begins using the units-of-production method based on proven and probable reserves. If no mineable ore body is discovered or such rights are otherwise determined to have no value, such costs are expensed in the period in which it is determined the property has no future economic value.

(h) Stripping costs

On March 30, 2005, the Financial Accounting Standard Board ("FASB") ratified the consensus of the Emerging Issues Task Force ("EITF") Issue 04-06 that stripping costs incurred during the production phase of a mine are variable production costs that should be included in the costs of the inventory produced during the period that the stripping costs are incurred.

In 2004 and prior periods, Apollo deferred or accrued stripping costs incurred during production, as appropriate, and charged these costs to operations on the basis of the estimated average stripping ratio for Montana Tunnels. Commencing in the second quarter of 2005, Apollo changed its accounting policy under Canadian GAAP and U.S. GAAP with respect to stripping costs to be consistent with the consensus reached by the EITF, on the basis that the consensus results in a more reliable, relevant and consistent application of GAAP. This change has been applied retrospectively by restating prior periods. The effect of this change was to increase the deficit at January 1, 2003 by \$12,129,000 and to increase the net loss for the years ended December 31, 2004 and 2003 by \$12,818,000 (\$0.16 per

share) and \$11,904,000 (\$0.22 per share), respectively.

F-10

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

(i) Exploration expenditures

Exploration expenditures are expensed as incurred during the reporting period.

(j) Property evaluations

The Company evaluates the carrying amounts of its mining properties and related buildings, plant and equipment when events or changes in circumstances indicate that the carrying amount may not be recoverable. Annually, or if the Company has reason to believe that an impairment may exist, estimated future undiscounted cash flows are prepared using estimated recoverable ounces of gold (considering current proven and probable reserves and mineral resources expected to be converted into mineral reserves) and corresponding co-product credits along with estimated future metals prices and estimated operating and capital costs. The inclusion of mineral resources is based on various circumstances, including but not limited to the existence and nature of known mineralization, location of the property, results of recent drilling and analysis to demonstrate the ore is commercially recoverable. The future cash flows cover the known ore reserve at the time. If the future undiscounted cash flows are less than the carrying value of the assets, the assets will be written down to fair value and the write-off charged to earnings in the current period.

(k) Reclamation and closure costs

The Company recognizes liabilities for statutory, contractual or legal obligations associated with the retirement of property, plant and equipment, when those obligations result from the acquisition, construction, development or normal operation of the assets. Initially, a liability for an asset retirement obligation is recognized at its fair value in the period in which it is incurred. Upon initial recognition of the liability, the corresponding asset retirement cost is added to the carrying amount of that asset and the cost is amortized as an expense over the economic life of the related asset. Following the initial recognition of the asset retirement obligation, the carrying amount of the liability is increased for the passage of time and adjusted for changes to the amount or timing of the underlying cash flows needed to settle the obligation.

The present value of the reclamation liabilities may be subject to change based on management's current estimates, changes in remediation technology or changes to the applicable laws and regulations by regulatory authorities, which affects the ultimate cost of remediation and reclamation.

(l) Revenue recognition

Revenue from the sale of gold and co-products is recognized when the following conditions are met: persuasive evidence of an arrangement exists; delivery has occurred in accordance with the terms of the arrangement; the price is fixed or determinable and collectability is reasonably assured. Revenue for gold bullion is recognized at the time of delivery and transfer of title to counter-parties. Revenue for lead and zinc concentrates is determined by contract as legal title to the concentrate transfers and include provisional pricing arrangements accounted for as an embedded derivative instrument under SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended.

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

3. SIGNIFICANT ACCOUNTING POLICIES (continued)**(m)** Commodity contracts

The Company entered into hedging contracts for gold involving the use of combinations of put and call options. These options had common notional amounts and maturity dates and were designated in combination as hedges of future gold sales on the basis that they generated offsetting cash flows. No premium was received with respect to these options.

Providing that the criteria for an effective hedge are met, gains and losses on the contracts are deferred and recognized in revenue at the time of the sale of the designated future gold production. If the criteria are not met these contracts will be marked to market each period.

(n) Stock incentive plans

Effective January 1, 2004, the Company adopted the amended recommendations of the CICA Handbook Section 3870, *Stock-based Compensation and Other Stock-based Payments*. Under the amended standards of this Section, the fair value of all stock-based awards granted are estimated using the Black-Scholes model and are recorded in operations over their vesting periods. The compensation cost related to stock options granted to employees and directors after January 1, 2004 is recorded in the consolidated statement of operations.

Previously, the Company provided note disclosure of pro forma net loss as if the fair value based method had been used on stock options granted to employees and directors after January 1, 2002. The amended recommendations have been applied using the retroactive method without restatement and had the effect of increasing share capital, contributed surplus and opening deficit as follows:

	Increase as at January 1, 2004
Share capital	\$ 257
Contributed surplus	5,594
Deficit	(5,851)

(o) Income taxes

The Company accounts for income taxes whereby future income tax assets and liabilities are computed based on differences between the carrying amount of assets and liabilities on the balance sheet and their corresponding tax values using the enacted income tax rates at each balance sheet date. Future income tax assets also result from unused loss carryforwards and other deductions. The valuation of future income tax assets is reviewed annually and adjusted, if necessary, by use of a valuation allowance to reflect the estimated realizable amount. Although the Company has tax loss carryforwards (see Note 13), there is uncertainty as to utilization prior to their expiry. Accordingly, the future income tax asset amounts have been fully offset by an uncertainty provision.

(p) Loss per share

The basic loss per share is computed by dividing the net loss by the weighted average number of common shares outstanding during the year. The fully diluted loss per share reflects the potential dilution of common share

equivalents, such as outstanding stock options and share purchase warrants, in the

F-12

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

3. SIGNIFICANT ACCOUNTING POLICIES (continued)

weighted average number of common shares outstanding during the year, if dilutive. For this purpose, the “treasury stock method” is used for the assumed proceeds upon the exercise of stock options and warrants that are used to purchase common shares at the average market price during the year.

(g) Comparative figures

Certain of the prior year’s figures have been reclassified to conform to the current year’s presentation. In particular, the assets and liabilities of the discontinued operations (Note 4) as at December 31, 2004 and their results of operations and cash flows for the years ended December 31, 2004 and 2003 have been reclassified as discontinued operations.

4. DISCONTINUED OPERATIONS

On November 18, 2005, the Company sold its Nevada properties (“the Nevada Assets”) to Jipangu for \$14.0 million in cash, resulting in the Company recording a total impairment of \$8.7 million. The Nevada Assets include the Florida Canyon Mine, an open pit heap leach operation located in the State of Nevada; the Standard Mine, an open pit heap leach operation situated 8 kilometers south of the Florida Canyon Mine; and four exploration properties located near the Florida Canyon Mine.

The following tables present summarized financial information related to discontinued operations:

	December 31,	
	2005	2004
ASSETS		
Cash and cash equivalents	\$ -	\$ 61
Broken ore on leach pad - current	-	8,960

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

7. RESTRICTED CERTIFICATES OF DEPOSIT

As at December 31 restricted certificates of deposit are as follows:

	2005	2004
Restricted certificate of deposit - Site closure obligation - Montana Tunnels (a)	\$ 5,465	\$ 3,810
Restricted certificate of deposit - Site closure obligation - Black Fox	581	561
Restricted certificate of deposit - Convertible Debenture (b)	10,997	-
	\$ 17,043	\$ 4,371

(a) Restricted certificate of deposit - Site closure obligation - Montana Tunnels

The restricted certificate of deposit represents cash that has been placed in trust as security to the State of Montana relating to the Company's site closure obligations (see Note 11).

The Company has entered into an agreement with CNA, an insurer, to complete the bonding requirements at MTMI. CNA committed to an approximate \$15 million 15-year term bonding facility which is not cancelable, unless MTMI fails to meet its requirements under the arrangement. The agreement obligates MTMI to make current payments of \$150,000 monthly until the balance in the trust account is equal to the penal sum of the CNA bond. The monthly payments are adjusted annually in August of each year and are dependent upon the average gold price for the previous twelve months. At December 31, 2005, the restricted certificate of deposit for bonding requirements at Montana Tunnels is \$5.5 million (2004 - \$3.8 million). In March 2006, the Company adopted a plan to dispose of MTMI.

(b) Restricted certificate of deposit - Convertible Debenture

The restricted certificate of deposit - convertible debenture represents cash that has been placed in trust with The Canada Trust Company as security for the convertible debenture (Note 9). This restriction was released on January 8, 2006 (Note 21(a)).

8. NOTES PAYABLE

The notes payable are secured by a fixed charge on certain machinery and equipment and bear interest at various rates between 2.76% and 7.5%, (2004 - 2.76% and 7.5%) and are repayable as follows at December 31, 2005:

2006	\$ 596
2007	75
Total notes payable	671
Less current portion	(596)
Total long-term obligations	\$ 75

9. CONVERTIBLE DEBENTURE

On November 4, 2004 the Company completed a \$10.5 million offering consisting of \$8.8 million special notes and \$1.7 million special warrants (Note 12 (b)(i)). These special notes were converted into \$8.8 million convertible secured debentures (the "Debentures") and 5,253,750 warrants (the "Note Warrants"). The Debentures mature

on December 16, 2007 and bear interest at a rate of 12% per annum, payable quarterly in arrears beginning on December 31, 2004. The Note Warrants

F-15

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

9. CONVERTIBLE DEBENTURE (continued)

expire on November 4, 2007 and are each exercisable for one common share of the Company at a price of \$0.40 per common share, except as noted (Note 21(a)).

The Debentures are convertible, at the option of the holder, at any time prior to maturity or five days prior to redemption into common shares of the Company at a price of \$0.75 per common share. Since redemption can be made either by cash or by common shares at the option of the Company, the Debentures are classified as a compound financial instrument for accounting purposes.

The value of the Debentures is comprised of a \$5.6 million fair value of the Debentures, \$2.2 million fair value of the holder's option to convert the principal balance into common shares, and \$0.9 million fair value of the Note Warrants. These components have been measured at their respective fair values on the date that the Debentures and Note Warrants were issued. The \$5.6 million fair value of the Debentures is classified as a liability and the \$3.1 million combined fair value of the conversion option and Note Warrants have been classified in shareholders' equity. Over the three-year term of the Debentures, the fair value of the Debentures are accreted to their face value. The periodic accretion of the Debentures is charged to accretion expense. For the year ended December 31, 2005, the Company recorded accretion of \$2.1 million (2004 - \$71,000) related to the Debentures as a charge to accretion expense with a corresponding credit to the liability component of the Debentures.

The Company incurred equity issuance costs of \$0.4 million and deferred financing costs of \$0.8 million. Deferred financing costs are amortized over the term of the Debenture. During 2005 and 2004, \$319,000 and \$53,000, respectively, of deferred financing costs were charged to operations.

In addition, the agents were granted 1,167,500 warrants as additional compensation in connection with the issuance of the Debentures. Each warrant entitles the holder to acquire one share at a price of \$0.80 per share until November 4, 2006. In the event that the weighted average trading price of the Company's shares on the TSX is more than \$2.00 for 20 consecutive trading days, the Company has the right to cause the exercise of the warrants into shares. The fair value of these compensation warrants of \$0.3 million is comprised of \$91,000 equity issuance costs and \$0.2 million deferred financing costs to be amortized over the term of the Debenture.

On October 7, 2004, the Company completed a bridge loan facility for \$3.0 million, which was repaid in full from the proceeds of this offering. In connection with this bridge loan the agents were granted 1,000,000 compensation warrants with an exercise price of \$0.80 expiring October 7, 2006. The fair value of these warrants of \$0.3 million is treated as a financing cost.

10. EMPLOYEE BENEFIT PLAN

The Company maintains a defined contribution 401(k) plan for all U.S. employees. Employees have the right to invest up to 25% of their respective earnings up to the statutory limits. All U.S. employees are eligible to participate on the first of the following month after their date of hire. In the past, the Company matched 100% of the first 6% invested. Due to cash constraints, the Company match was discontinued on September 10, 2004. The vesting schedule is two years.

The amounts charged to earnings for the Company's defined contribution plan totaled nil, \$338,000 and \$449,000 for the years ended December 31, 2005, 2004 and 2003, respectively.

APOLLO GOLD CORPORATION**Notes to the Consolidated Financial Statements - (Continued)****11. ACCRUED SITE CLOSURE COSTS**

All of the Company's operations are subject to reclamation and closure requirements. Although the ultimate amount of site restoration costs is uncertain, on a regular basis, the Company monitors these costs and together with third party engineers prepares internal estimates to evaluate their bonding requirements. The estimates prepared by management are then reconciled with the requirements of the state and federal officials.

At December 31, 2005, the accrued site closure liability amounted to \$12.6 million (2004 - \$11.8 million). This liability is based on a third party engineer report. The liability is covered by a combination of surety bonds, a restricted certificate of deposit and property which in aggregate are valued at approximately \$17.0 million.

In view of the uncertainties concerning future removal and site restoration costs, as well as the applicable laws and legislations, the ultimate costs to the Company could differ materially from the amounts estimated by management. Future changes, if any, due to their nature and unpredictability, could have a material impact and would be reflected prospectively, as a change in accounting estimate.

The following table summarizes the effect to the Company's accrued site closure costs:

Balance, December 31, 2002	\$	8,679
Accretion		500
Expenditures		(31)
Balance, December 31, 2003		9,148
Accretion		820
Increase in reclamation assets		1,785
Balance, December 31, 2004		11,753
Accretion		881
Balance, December 31, 2005	\$	12,634

The Company has estimated that the total obligations associated with the retirement of the Montana Tunnels mine at December 31, 2005 are \$18.3 million. The \$12.6 million (2004 - \$11.8 million) fair value of these obligations is determined using a 7.5% credit adjusted risk-free discount rate and expected payment of obligations over fifteen years.

12. SHARE CAPITAL**(a) Shares issued in 2005**

(i) On January 7, 2005, the Company completed the second tranche of a private placement of 4,199,998 units with a purchase price of \$0.75 for net proceeds of \$2.8 million, net of expenses of \$0.3 million and fair value of broker's compensation warrants of \$0.2 million. Each unit is comprised of one common share of the Company and 0.75 share purchase warrant, with each whole share purchase warrant exercisable into one common share of the Company for two years at an exercise price of \$1.00 per share. In connection with the first and second tranches, 1,250,000 broker compensation warrants were issued. (See Note 12(d) for a description of the broker compensation warrants.)

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

12. SHARE CAPITAL (continued)

(ii) During 2005, the Company increased its interest in the Huizopa Project with Argonaut. In consideration for such increase, the Company issued shares with a value of \$410,000 which were recorded as property, plant and equipment within the balance sheet. Following this arrangement, the Company's Mexican subsidiary owns Argonaut's former subsidiary which has a contractual interest in two of the concessions at the Huizopa Project. The Company no longer has any earn-in requirement for the project, although it will still be responsible for the underlying payments to the landowner of the project, and the payments and performance or obligations required to maintain those concessions.

(iii) On June 3, 2005, the Company completed the issuance to Jipangu of 10,000,000 common shares at \$0.32 (Cdn\$0.40) per share for proceeds of \$3.2 million, net of expense of \$32,000.

(iv) The Company issued to BMO Nesbitt Burns Inc. ("BMO") on June 30, 2005, as an engagement fee to act as a financial adviser to the Company with respect to the sale of the Nevada Assets, 350,000 common shares of the Company and 1,250,000 common share purchase warrants of the Company, with each warrant immediately exercisable into one common share of the company at an exercise price of Cdn\$0.40 and an expiry date of June 30, 2007.

The 1,250,000 common share purchase warrants were fair valued using an option pricing model with the following assumptions: no dividends are paid, a volatility of the Company's share price of 78%, an expected life of the warrants of two years, and an annual risk-free rate of 3.6%.

(v) On November 30, 2005, the Company issued 900,000 common shares to BMO at \$0.22 (Cdn\$0.26) per share, as a completion fee related to the closing of the sale of the Nevada Assets.

(b) Shares issued in 2004

(i) On November 4, 2004, in connection with the offering of Special Notes (Note 9), the Company issued 2,326,666 special warrants for proceeds of \$1.4 million, net of expenses of \$0.2 million and fair value of agent's warrants of \$50,000. Each special warrant was converted at no additional cost into one share and 0.6 share purchase warrant entitling the purchase of one share of the Company for three years at a price of \$0.80 per share.

In connection with this offering, the agent received a commission of 6.5% of gross proceeds plus 232,667 compensation warrants, each warrant entitling the purchase of one share of the Company for two years at \$0.80 per share.

(ii) On December 31, 2004, the Company completed the first tranche of a private placement for 8,299,999 units with an exercise price of \$0.75 for proceeds of \$4.9 million, net of expenses of \$0.7 million and fair value of underwriter's units of \$0.6 million. Each unit is convertible at no additional cost into one common share of the Company and 0.75 share purchase warrant with each whole share purchase warrant entitling the purchase of one share of the Company for two years at a price of \$1.00 per share. In connection with this offering, 830,000 underwriter's units were issued with the same terms as described above.

(iii) On December 31, 2004, under a private placement financing, the Company issued 714,285 flow-through common shares, for aggregate proceeds of \$0.5 million.

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

12. SHARE CAPITAL (continued)

(iv) Using the fair value based method of stock-based compensation, share issuance costs of \$50,000 and \$0.6 million were recognized for the compensation warrants and broker units. These amounts were determined using an option pricing model with the following weighted average assumptions: no dividends were paid, a volatility of the Company's share price of 64%, and an expected life of the warrants of two years and annual risk-free rate of 3.48%.

(v) The Company issued 48,978 shares in part consideration to meet the earn-in requirements of the Huizopa joint venture agreement with Argonaut Mines LLC.

(c) Shares issued in 2003

(i) On September 26, 2003, the Company issued 22,300,000 shares for proceeds of \$37.2 million, net of agent's commissions of \$2.2 million, expenses of \$0.7 million and fair value of agent's warrants of \$0.4 million.

(ii) On October 27, 2003, the agents exercised their over-allotment option and the Company issued a further 2,132,300 shares for proceeds of \$3.7 million, net of expenses of \$0.2 million and fair value of agent's warrants of \$35,000.

(iii) The Company granted the agents 732,969 agent's warrants with an exercise price of \$1.67 (Cdn\$2.25) per warrant in connection with this issuance. These agent's warrants expired in 2005. Using the fair value based method for stock-based compensation, share issuance costs of \$0.4 million were recognized. This amount was determined using an option pricing model assuming no dividends were paid, a volatility of the Company's share price of 53%, an expected life of the warrants of two years, and annual risk-free rate of 3.50%.

(d) Warrants

The following summarizes outstanding warrants as at December 31, 2005:

Date Issued	Number of Warrants	Number of Shares	Exercise Price	Expiry Date
			Exercisable in US\$	
October 19, 2004	1,000,000	1,000,000	\$ 0.80	October 19, 2006
November 4, 2004	1,400,133	1,400,133	0.80	November 4, 2006
December 31, 2004	6,224,999	6,224,999	1.00	December 31, 2006
November 4, 2004	5,253,600	5,253,600	0.80	November 4, 2007
November 4, 2004	1,396,000	1,396,000	0.80	November 4, 2007
January 7, 2005	3,149,998	3,149,998	1.00	January 7, 2007
	18,424,730	18,424,730		
			Exercisable in Cdn\$	
December 23, 2002	3,000,000	3,000,000	Cdn\$ 3.25	

				December 23, 2006
June 30, 2005	1,250,000	1,250,000	Cdn\$ 0.40	June 30, 2007
	4,250,000	4,250,000		
	22,674,730	22,674,730		

In addition, 1,250,000 broker compensation warrants were issued and were immediately exercisable on January 7, 2005. The broker compensation warrants were issued in connection with the first and second

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

12. SHARE CAPITAL (continued)

tranches of the private placement described in Note 12(a)(i). Each broker compensation warrant is exercisable at \$0.75 into one common share of the Company and 0.75 of a share purchase warrant, with each whole share purchase warrant exercisable into one common share of the Company at \$1.00 per common share. The broker compensation warrants expire on January 7, 2007. The share purchase warrants are exercisable for two years from the date of issue.

(e) Options

A summary of information concerning outstanding stock options at December 31, 2005 is as follows:

	Fixed Stock Options		Performance-based Stock Options	
	Number of Common Shares	Weighted Average Exercise Price	Number of Common Shares	Weighted Average Exercise Price
Balances, December 31, 2002	-	\$ -	2,780,412	\$ 0.80
Options granted	2,039,100	2.20	-	-

Balances, December 31, 2005	3,874,100	\$ 1.15	1,794,582	\$ 0.80

(i) Fixed stock option plan

The Company has a stock option plan that provides for the granting of options to directors, officers, employees and service providers of the Company.

The following table summarizes information concerning outstanding and exercisable fixed stock options at December 31, 2005:

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

12. SHARE CAPITAL (continued)

Options Outstanding		Weighted Average Exercise Price per Share	Options Exercisable	
Number Outstanding	Expiry Date		Number Exercisable	Weighted Average Exercise Price per Share
969,800	February 18, 2013	\$ 2.24	969,800	\$ 2.24
2,600	March 28, 2013	2.34	2,600	2.34
100,000	November 13, 2013	1.67	100,000	1.67
271,600	March 10, 2014	2.05	135,800	2.05
125,000	May 19, 2014	1.44	62,500	1.44
26,600	August 10, 2014	0.95	13,300	0.95
1,878,500	March 10, 2015	0.65	-	-
100,000	April 6, 2015	0.39	-	-
100,000	August 4, 2015	0.27	-	-
300,000	December 12, 2015	0.20	-	-
3,874,100		\$ 1.15	1,284,000	\$ 2.12

(ii) Performance-based stock option plan

In 2002, 2,780,412 performance-based options with an expiry date of June 25, 2007 were granted to certain directors, officers and employees, and were subject to reduction if certain performance criteria were not met. In fiscal 2003, the balance of the options vested based upon the established fiscal 2003 performance criteria. As of December 31, 2005 there are 1,794,582 performance-based stock options outstanding.

(f) Stock-based compensation

The fair value of each option granted is estimated at the time of grant using the Black-Scholes option pricing model with weighted average assumptions for grants as follows:

	2005	2004	2003
Risk free interest rate	3.669%	3.141%	3.534%
Dividend yield	0%	0%	0%
Volatility	73%	57%	75%
Expected life in years	5	5	5

As the Company has selected the retroactive without restatement method for reporting the change in accounting policy related to stock compensation expense (Note 3 (n)), the Company must disclose the impact on net loss and net loss per share as if the fair value based method of accounting for stock-based compensation had been applied in 2003.

	2003
Net loss	
As reported	\$ (14,090)
Compensatory fair value of options	(3,871)

Edgar Filing: APOLLO GOLD CORP - Form 10-K

Pro forma	\$	(17,961)
Basic and diluted net loss per share		
As reported	\$	(0.26)
Pro forma		(0.33)

The weighted average grant-date fair value of stock options granted during 2005 was \$0.36.

F-21

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

13. INCOME TAXES

The Company did not record a provision or benefit for income taxes for the periods ended December 31, 2005, 2004 and 2003, due to the availability of net operating loss carryforwards and the uncertainty of their future realization.

The provision for income taxes reported differs from the amounts computed by applying the cumulative Canadian federal and provincial income tax rates to the loss before tax provision due to the following:

	2005	2004	2003
Statutory tax rate	34.90%	35.62%	37.62%
Recovery of income taxes computed at standard rates	\$ 5,570	\$ 9,722	\$ 5,940
Higher (lower) foreign tax rates	817	150	(425)
Tax losses not recognized in the period that the benefit arose	(6,387)	(9,872)	(5,515)
	\$ -	\$ -	-

The tax effects of temporary differences that would give rise to significant portions of the future tax assets and future tax liabilities at December 31, were as follows:

	2005	2004
Future income tax assets		
Net operating losses carried forward	\$ 46,385	\$ 37,676
Exploration and development expenses	829	1,871
Property, plant and equipment	2,672	10,082
Accrued site closure costs	4,587	4,251
Other	5,676	2,542
	60,149	56,422
Less: Valuation allowance	(60,149)	(56,422)
Net future income tax assets	\$ -	\$ -

Utilization of the net operating losses carried forward and the foreign exploration and development expenses are subject to limitations. The Company has placed a full valuation allowance on its excess tax assets due to a lack of past taxable profits. It does not believe significant income tax obligations will occur in the near future. At December 31, 2005, the Company has the following unused tax losses available for tax purposes:

Country	Amount	Expiry
Canada	\$ 14,738	2006-2015
United States	113,600	2011-2025

APOLLO GOLD CORPORATION**Notes to the Consolidated Financial Statements - (Continued)****14. FINANCIAL INSTRUMENTS AND RISK MANAGEMENT****(a) Market risk**

Due to the nature of the precious metals market, the Company is not dependent on a significant customer to provide a market for its refined gold and silver. However, if the Company had to change the smelters to which zinc and lead concentrates are shipped, the additional transportation costs could be considerable. Although it is possible that the Company could be directly affected by weaknesses in the metals processing business, the Company periodically monitors the financial condition of its customers.

Accounts receivable at December 31, 2005 are due from two customers.

(b) The estimated fair value of the Company's financial instruments was as follows:

	2005		December 31,		2004	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value	Carrying Amount	Fair Value
Cash and cash equivalents	\$ 127	\$ 127	\$ 6,886	\$ 6,886	\$ 6,886	\$ 6,886
Accounts receivable	2,638	2,638	2,963	2,963	2,963	2,963
Accounts payable	7,185	7,185	6,007	6,007	6,007	6,007
Accrued liabilities	1,841	1,841	1,795	1,795	1,795	1,795
Notes payable and other liabilities						
Current	596	596	789	789	789	789
Non-current	75	75	423	423	423	423
Convertible debenture	6,601	6,601	5,538	5,538	5,538	5,538

The fair value of notes payable was determined using the discounted cash flows at prevailing market rates. The fair value of the Company's other financial instruments was estimated to approximate their carrying value due primarily to the immediate or short-term maturity of these financial instruments.

(c) Commodity contracts

In 2003 the Company entered into commodity contracts, with Standard Bank London Limited, for gold in the aggregate amount of 100,000 ounces involving the use of combinations of put and call options. The contracts gave the holder the right to buy, and the Company the right to sell, stipulated amounts of gold at the upper and lower exercise prices, respectively. The contracts continued through April 25, 2005 with a put option strike price of \$295 per ounce and a call option strike price of \$345 per ounce. As at December 31, 2005 there were no ounces remaining on these contracts.

15. COMMITMENTS AND CONTINGENCIES**(a) Royalties**

The Company's properties are subject to royalty obligations based on minerals produced from the properties. The Montana Tunnels and Black Fox Project reserves are not subject to a royalty obligation. Royalty obligations for the

Huizopa Project arise upon mine production.

F-23

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

15. COMMITMENTS AND CONTINGENCIES (continued)

(b) Environmental

The Company's mining and exploration activities are subject to various federal, provincial and state laws and regulations governing the protection of the environment. These laws and regulations are continually changing and generally becoming more restrictive. The Company conducts its operations so as to protect public health and the environment and believes its operations are materially in compliance with all applicable laws and regulations. The Company has made, and expects to make in the future, expenditures to comply with such laws and regulations.

(c) Litigation and claims

The Company is from time to time involved in various claims, legal proceedings and complaints arising in the ordinary course of business. The Company does not believe that adverse decisions in any pending or threatened proceedings related to any matter, or any amount which it may be required to pay by reason thereof, will have a material effect on the financial conditions or future results of operations of the Company.

(d) Black Fox Project

An additional \$2.6 million (Cdn\$3.0 million) was due to the original owners to purchase the Black Fox Project property free and clear of all encumbrances. This payment was made in January 2006 as more fully described in Note 21(a).

(e) Huizopa Project

If the Company wishes to maintain the exploration and exploitation rights for the "Rosa" and "Donna" concessions, both located in the Municipality of Madera, Chihuahua, Mexico, then it will be required to pay \$0.1 million in April 2006, \$0.1 million in April 2007 and \$1.5 million in October 2007. These concessions represent approximately 17% of the Huizopa property.

(f) Indemnification obligations

The Company is subject to certain indemnification obligations to Jipangu relating to the sale of the Nevada Assets. At this time, the Company is unable to predict what cost there will be, if any, related to such indemnification obligations.

(g) Potential Sale of Montana Tunnels Mining, Inc.

The Company has employed the services of a merchant bank to assist with the sale of Montana Tunnels Mining, Inc., the successful sale of which would result in the payment of a success fee to the bank.

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

16. LEASE COMMITMENTS

Minimum lease payments under capital and non-cancelable operating leases and the present value of net minimum payments at December 31, 2005 were as follows:

	Capital Leases	Operating Leases
2006	\$ 92	\$ 193
2007	37	97
2008	28	26
2009	14	-
Total	171	\$ 316
Less imputed interest	15	
Total present value of minimum capital lease payments	156	
Less current portion of capital lease obligations	82	
Long-term capital lease obligations	\$ 74	

Rent expense under non-cancelable operating leases was \$71,000, \$81,000 and \$87,000 for 2005, 2004 and 2003, respectively. The current portion of the capital lease obligations is included in current portion of notes payable and the long-term portion is included in long-term portion of notes payable in the consolidated balance sheets.

17. NET CHANGE IN NON-CASH OPERATING WORKING CAPITAL ITEMS

	2005	2004	2003
(Increase) decrease in:			
Accounts receivable	\$ 325	\$ 898	\$ (1,656)
Prepays	(291)	165	(25)
Inventories	484	(552)	(133)
Increase (decrease) in:			
Accounts payable	1,178	2,564	28
Accrued liabilities	45	224	550
Property and mining taxes payable	104	124	142
	\$ 1,845	\$ 3,423	\$ (1,094)

18. RELATED PARTY TRANSACTIONS

The Company had the following related party transactions during each of the years in the three-year period ended December 31, 2005:

	2005	2004	2003
Legal fees paid to two law firms, a partner of each firm is a director of the Company	\$ 335	\$ 549	\$ 795
Consulting services paid to a relative of an officer and director of the Company	18	6	64

These transactions are in the normal course of business and are measured at the exchange amount which is the consideration established and agreed to by the related parties.

F-25

APOLLO GOLD CORPORATION

Notes to the Consolidated Financial Statements - (Continued)

19. SEGMENTED INFORMATION

Apollo operates the Montana Tunnels mine in the United States and the Black Fox development project in Canada. The reportable segments have been determined at the level where decisions are made on the allocation of resources and capital and where performance is measured. The Nevada Assets have been reported as discontinued operations (Note 4). The accounting policies for these segments are the same as those followed by the Company as a whole.

Amounts as at December 31, 2005 are as follows:

	Montana Tunnels	Black Fox	Corporate and Other	Total
Cash and cash equivalents	\$ 8	\$ 15	\$ 104	\$ 127

20. DIFFERENCES BETWEEN CANADIAN AND U.S. GAAP

The Company prepares its consolidated financial statements in accordance with Canadian GAAP. The following adjustments and/or additional disclosures would be required in order to present the financial statements in accordance with U.S. GAAP and with practices prescribed by the U.S. Securities and Exchange Commission for the years ended December 31, 2005, 2004 and 2003.

Material variances between financial statement items under Canadian GAAP and the amounts determined under U.S. GAAP are as follows:
