  - Soliciting material pursuant to Rule 14a-12 under the Exchange Act (17 CFR 240.14a-12)
  - Pre-commencement communications pursuant to Rule 14d-2(b) under the Exchange Act (17 CFR 240.14d-2(b))
  - Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))
-

Item 8.01. Other Events

On July 6, 2009, United States Oil Fund (“USO”) filed a current report on Form 8-K in response to published reports suggesting that 2008’s run-up in crude oil prices were the result of the investments made in the crude oil futures market by large, un-levered and passive index funds. Many of these reports cited USO as an example of such a fund whose buying and selling activities were alleged to be causing unusually wide swings in crude oil prices.

On January 7, 2010 USO filed another current report on Form 8-K in response to these unfounded allegations. In that filing, USO included a chart which displayed the total futures contract holdings of USO for the three years ending December 31, 2009 versus the movement in the price of the crude oil futures contract used as USO’s benchmark. Management believes that the chart makes clear that any attempt to conclude that the run up in oil prices that occurred in 2007 and 2008 could possibly have been the direct or indirect result of USO’s investing activity is a flawed conclusion.

The report that USO has filed today extends the data contained in the chart from the January 7, 2010 filing to include USO’s futures holdings and the price movement of the crude oil futures contract used as USO’s benchmark to the time period ending July 30, 2010. Management believes this additional information will be of use to investors, financial regulators, and market observers.

Since the run-up in crude oil prices in 2008, crude oil prices retreated in late 2008 through early 2009 but have risen again to nearly \$80 per barrel. These fluctuations have again given rise to published reports suggesting that large, unlevered and passive index funds, such as USO, are to blame for the recent increase in crude oil prices. USO’s management believes these reports significantly mischaracterize USO’s impact on the market price of oil and is providing updated factual information to rebut these reports. USO in no way intends that the information included in this Form 8-K be considered an “offer” of its units.

The chart below compares the price of the NYMEX front month light, sweet crude oil contract (“CL”) to the actual size of USO’s crude oil futures contracts holdings. The time period covered by this chart is the three year and seven month period ending July 30, 2010. The CL price, shown on the left hand axis, is in dollars per barrel. USO’s crude oil futures contract holdings, shown on the right hand axis, are in 1,000 barrel contract equivalents.

The data shows that during the run-up in crude oil prices from January 2007, at \$53 a barrel, to July 2008, at roughly \$145 a barrel, USO’s holdings in crude oil futures contracts declined.

Furthermore, the increase in crude oil contracts held by USO that occurred in late 2008, and continued to February 2009, coincided with a period of time when crude oil prices trended lower, not higher.

Finally, the most recent increase in crude oil prices, which began in February of 2009 and continues to the present, coincides with a period in which USO was a large scale net seller of futures contracts, not a net buyer. The largest number of crude oil futures contracts held by USO occurred when crude oil prices were approximately \$42 a barrel in early 2009, or near the low point during the period of time presented in the chart below. Since February 2009, crude oil prices have rebounded and are currently near \$80 per barrel. However, since February 2009, USO has been a net seller of crude oil futures contracts and currently owns approximately one-quarter as many crude oil futures contracts in the middle of 2010 as compared with the number of crude oil futures contracts held in February 2009.

The data presented in the chart does not support the theory that USO’s activities drove oil prices significantly higher in either 2008 or in recent months and suggest that, if anything, USO’s activities were a moderating influence on oil prices.

In sum, management continues to strongly believe that the activities of USO have not caused the extreme swings in the price of crude oil as alleged in some published articles. However, due to the nature of these claims about USO and its investing practices, USO management believes it has a legitimate concern that the activities of USO could be negatively impacted to the detriment of its thousands of unitholders, unless such claims are publicly refuted.

USO's management is of the view that the best source of information regarding its investment objective and the risks associated with an investment in USO is its most current prospectus and the periodic reports it files with its regulators, including the Securities and Exchange Commission ("SEC"). Copies of the most current version of the foregoing can be found at USO's website, [www.unitedstatesoilfund.com](http://www.unitedstatesoilfund.com), or through the SEC on its website, [www.sec.gov](http://www.sec.gov). Copies are also available on request from USO's general partner, United States Commodity Funds LLC. In addition, on a daily basis, USO publishes on its website its holdings and net asset value.

Certain matters discussed in this current report on Form 8-K, including any statements that are predictive in nature or concern future market and economic conditions, our future performance, or our future actions and their expected results are "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements are based on current expectations and projections about future events and are not guarantees of future performance. We do not have a specific policy or intent of updating or revising forward-looking statements. Actual events and results may differ materially from those expressed or forecasted in forward-looking statements due to a number of factors. Please see our periodic reports and other filings with the SEC for a further discussion of these and other risks and uncertainties applicable to our business. The forward-looking statements and projections contained in this current report on Form 8-K are excluded from the safe harbor protection provided by Section 21E of the Securities Exchange Act of 1934.
