HSBC BANK CANADA
FIRST QUARTER 2013 RESULTS

- Profit for the quarter ended 31 March 2013 was C\$189m, a decrease of 14% compared with the same period in 2012.
- Profit attributable to common shareholders was C\$171m for the quarter ended 31 March 2013, a decrease of 15% compared with the same period in 2012.
- Return on average common equity was 16.3% for the quarter ended 31 March 2013 compared with 19.8% for the same period in 2012.
 - The cost efficiency ratio improved to 45.0% for the quarter ended 31 March 2013 compared with 50.5% for the same period in 2012.
 - Total assets were C\$84.4bn at 31 March 2013 compared with C\$80.7bn at 31 March 2012.
- Total assets under administration increased to C\$20.4bn at 31 March 2013 from C\$18.3bn at 31 March 2012.
- Common equity tier 1 capital ratio was 11.1%, tier 1 ratio 13.9% and total capital ratio 15.9% at 31 March 2013 determined in accordance with regulatory guidelines and the Basel III capital adequacy framework adopted with effect from 1 January 2013.

The abbreviations "C\$m" and "C\$bn" represent millions and billions of Canadian dollars, respectively.

HSBC Bank Canada

Financial Commentary

Overview

HSBC Bank Canada recorded profit of C\$189m for the first quarter of 2013, a decrease of C\$30m, or 14%, compared with the first quarter of 2012, and an increase of C\$35m, or 23%, compared with the fourth quarter of 2012. Profit attributable to common shareholders was C\$171m for the first quarter of 2013, a decrease of C\$30m, or 15%, compared with the first quarter of 2012, and an increase of C\$34m, or 25%, compared with the fourth quarter of 2012.

The first quarter of 2012 included a gain on the sale of the full service brokerage business of C\$84m and a restructuring charge of C\$36m mostly relating to the wind-down of the consumer finance business. Excluding the impact of these items and their effect on income tax expense, profit increased by C\$17m, or 8%, compared with the same quarter last year. The increase is mainly due to reduced operating expenses from strict cost control and continued delivery of organizational cost effectiveness programmes, which resulted in sustainable cost savings. Additionally contributing to the increase were higher gains on the disposal of available-for-sale financial investments, and a growth in trading income as a result of a change in valuation estimation methodology on derivatives. The increase is partially offset by lower net interest income mainly due to lower average retail and consumer finance loan balances following the strategic refocus of these businesses and continued pressure on net interest spread in a prolonged low interest rate environment.

The fourth quarter of 2012 included a C\$42m charge resulting from the write down in the value of investment property. Excluding the charge resulting from the write down, profit in the first quarter of 2013 increased by C\$66m compared with the prior quarter mainly due to higher gains on the disposal of available-for-sale financial investments, partially offset by higher specific provisions for commercial exposures notably in the energy and real estate sectors.

Commenting on the results, Paulo Maia, President and Chief Executive Officer of HSBC Bank Canada, said:

"We've enjoyed a good start to 2013, as a result of our focus on building our core businesses, deepening client relationships, and continued improvements in the efficiency of our operations in Canada, consistent with HSBC's global strategy. Our success is driven by our ability to connect internationally-minded Canadian businesses and individuals to opportunities around the world."

Analysis of Consolidated Financial Results for the First Quarter of 2013

Net interest income for the first quarter of 2013 was C\$336m, a decrease of C\$62m, or 16%, compared with the first quarter of 2012, and a decrease of C\$12m, or 3%, compared with the fourth quarter of 2012. The decreases are mainly due to lower average retail and consumer finance loan balances following the strategic refocus of these businesses and continued pressure on net interest spread in a prolonged low interest rate environment.

Net fee income for the first quarter of 2013 was C\$146m, an increase of C\$3m, or 2%, compared with the first quarter of 2012, and a decrease of C\$8m, or 5%, compared with the fourth quarter of 2012. The increase compared with the same quarter last year was due to a growth in authorized commercial credit facilities and higher funds under management. The decrease compared with the prior quarter is mainly due to a reduction in fee income from credit cards associated with lower transaction volume and a decrease in corporate finance fees.

Net trading income for the first quarter of 2013 was C\$57m, an increase of C\$17m, or 43% compared with the first quarter of 2012, and an increase of C\$12m, or 27%, compared with the fourth quarter of 2012. Net trading income increased compared to both the first and fourth quarters of 2012 as a result of a change in estimation methodology in respect of credit and debit valuation adjustments on derivative contracts to reflect evolving market practises. In addition higher global customer trading volumes in foreign exchange products and improved performance in rates and credit products contributed to the increase. Net trading income in the first quarter of 2012 included losses caused by the narrowing of credit spreads on the carrying value of our own debt instruments classified as trading.

Net expense from financial instruments designated at fair value for the first quarter of 2013 was C\$3m, compared with a net expense of C\$14m in the first quarter of 2012, and was unchanged compared with the fourth quarter of 2012. The bank designates certain subordinated debentures to be recorded at fair value. Income and expense are largely as a result of the widening or narrowing of credit spreads decreasing or increasing the fair value of these subordinated debentures, respectively.

Gains less losses from financial investments for the first quarter of 2013 were C\$35m, an increase of C\$18m and C\$31m respectively compared with the first quarter of 2012 and fourth quarter of 2012. The increases in gains less losses from financial investments are due to higher gains on the disposal of available-for-sale financial investments driven by balance sheet management activities.

Other operating income/(expense) for the first quarter of 2013 was C\$13m, unchanged compared with the first quarter of 2012, and an increase of C\$39m compared with the fourth quarter of 2012. The fourth quarter of 2012 included a C\$42m charge resulting from the write down in the value of investment property.

Gain on the sale of the full service retail brokerage business. The sale of the full service retail brokerage business closed on 1 January 2012 and resulted in a gain of C\$84m, net of assets written off and directly related costs. In the

fourth quarter of 2012, the bank satisfied certain conditions relating to the sale of the full service retail brokerage business for which we recognized an increase to the gain of C\$4m.

Loan impairment charges and other credit risk provisions for the first quarter of 2013 were C\$56m, an increase of C\$8m, or 17%, compared with the first quarter of 2012, and an increase of C\$23m, compared with the fourth quarter of 2012. The increases are primarily due to higher specific provisions for commercial exposures notably in the energy and real estate sectors, partially offset by a reduction in collective consumer finance provisions due to improved delinquency performance.

Total operating expenses (excluding restructuring charges) for the first quarter of 2013 were C\$263m, a decrease of C\$45m, or 15%, compared with the first quarter of 2012, and a decrease of C\$15m, or 5%, compared with the fourth quarter of 2012. The decreases in total operating expenses compared with both quarters are mainly due to strict cost control and continued delivery of our organizational cost effectiveness programmes, which resulted in sustainable cost savings. Cost reductions relating to the wind-down of the bank's consumer finance business as well as reduced activities and expenses related to the delivery of technology services to HSBC Group companies also contributed to a further decrease in total operating expense compared with the same quarter last year.

Restructuring charges of C\$36m were recognized in the first quarter of 2012 mainly relating to the wind-down of the bank's consumer finance business.

Income tax expense. The effective tax rate in the first quarter of 2013 was 30.0%, compared with 25.2% in the first quarter of 2012 and 29.9% in the fourth quarter of 2012. The lower effective tax rate in the first quarter of 2012 was largely due to a lower effective tax rate applied to the gain on the sale of the full service retail brokerage business.

Statement of Financial Position

Total assets at 31 March 2013 were C\$84.4bn, an increase of C\$3.7bn from C\$80.7bn at 31 December 2012, mainly due to increases of C\$1.7bn in trading assets, C\$1.2bn in loans and advances to banks, C\$0.4bn in loans and advances to customers and C\$0.4bn in customers' liability under acceptances. The growth in trading assets is due to a higher holding of government and agency bonds as a result of increased trading activity in the rates business and a higher holding in pending settlement trading accounts. Loans and advances to banks and loans and advances to customers increased as a result of an increase in reverse repurchase agreements. Excluding the increase in reverse repurchase agreements, loans and advances to banks increased marginally by C\$0.1bn and loans and advances to customers decreased by C\$0.5bn.

Liquid assets increased to C\$25.9bn at 31 March 2013, compared to C\$24.3bn at 31 December 2012 mainly as a result of strong deposit growth and debt issues mostly invested in short term investments. Refer to the 'Use of non-IFRS financial measures' for a definition of liquid assets.

Total liabilities at 31 March 2013 were C\$78.9bn, an increase of C\$3.6bn from C\$75.3bn at 31 December 2012, mainly due to increases of C\$1.7bn in debt securities in issue, C\$1.3bn in trading liabilities and C\$0.4bn in acceptances. The increase in debt securities in issue is due to an additional C\$1.5bn of medium term notes and bearer deposits issued during the first quarter of 2013. The increase in trading liabilities is driven by an increase in short position securities to manage interest rate risk and a higher holding in pending settlement trading accounts.

Business Performance in the First Quarter of 2013

Commercial Banking

Profit before income tax expense was C\$123m for the first quarter of 2013, a decrease of C\$34m, or 22%, compared with the first quarter of 2012, and an increase of C\$3m, or 3%, compared with the fourth quarter of 2012. The fourth

quarter of 2012 included a C\$42m charge resulting from the write down in the value of investment property. Excluding the impact of the write down, profit before income tax expense decreased compared with the same quarter last year and compared with the prior quarter due to higher specific impairment provisions in the energy and real estate sectors and lower net interest spread, partially offset by reduced operating expenses as a result of strict cost control and continued delivery of our organizational cost effectiveness programmes, which resulted in sustainable cost savings.

Global Banking and Markets

Profit before income tax expense was C\$103m for the first quarter of 2013, an increase of C\$17m, or 20%, compared with the first quarter of 2012 and an increase of C\$34m, or 49%, compared with the fourth quarter of 2012. The increase in profit before income tax compared with the same quarter last year is due to higher gains on the disposal of available-for-sale investments and improved trading income as a result of a change in valuation estimation methodology on derivatives, higher global customer trading volumes in foreign exchange products and improved performance in rates and credit products. The increase is partially offset by a C\$8m gain on the sale of the full service retail brokerage business included in the same quarter last year.

The increase in profit before income tax compared with the prior quarter is due to higher gains on the disposal of available-for-sale investments and improved trading income as a result of a change in valuation estimation methodology on derivatives, higher global customer trading volumes in foreign exchange products and improved performance in rates and credit products. The increase is partially offset by reduced net fee income driven by lower derivative sales and debt capital market fees.

Retail Banking and Wealth Management

Profit before income tax expense for the first quarter of 2013 was C\$14m, a decrease of C\$78m compared with first quarter of 2012, and an increase of C\$11m compared with the fourth quarter of 2012. Profit before income tax in 2012 benefitted from a gain on the sale of the full service retail brokerage business partially offset by related restructuring charges. Excluding these items, profit before income tax expense decreased by C\$4m compared with the same quarter last year and increased by C\$15m compared with the prior quarter. The remaining decrease in profit before income tax expense compared with the same quarter last year is due to reduced net interest income driven by narrowing net interest spread and a decline in average loan balances partially offset by reduced operating expenses as a result of strict cost control and continued delivery of our organizational cost effectiveness programmes, which resulted in sustainable cost savings. The remaining increase in profit before income tax expense compared with the prior quarter is due to higher net interest income as a result of lower wholesale funding driven by strong growth in customer deposits, partially offset by a decline in average loan balances, and reduced operating expenses as a result of strict cost control and continued delivery of our organizational cost effectiveness programmes, which resulted in sustainable cost savings.

Consumer Finance

Profit before income tax expense was C\$35m for the first quarter of 2013, an increase of C\$52m compared with the first quarter of 2012, and an increase of C\$5m compared with the fourth quarter of 2012. In the first quarter of 2012, C\$34m in restructuring costs were incurred following the decision in March 2012 to wind-down the consumer finance business in Canada. Excluding the restructuring costs, profit before income tax expense increased by C\$18m compared with the same quarter last year and C\$5m compared with the prior quarter mainly due to lower operating expenses and loan impairment charges, partially offset by lower net interest income as a result of declining average loan balances.

Other

Activities or transactions which do not relate directly to the above business segments are reported in Other. The main items reported under Other include gains and losses from the impact of changes in credit spreads on our own subordinated debentures designated at fair value and revenue and expense related to information technology services provided to HSBC Group companies on an arm's length basis. Profit before income tax expense for the first quarter of 2013 was a loss of C\$6m, compared with losses of C\$28m and C\$4m respectively for the first quarter of 2012 and the fourth quarter of 2012. The variances from comparative periods are primarily due to the impact of the items noted above.

Dividends

During the first quarter of 2013, the bank declared and paid C\$90m in dividends on HSBC Bank Canada common shares, an increase of C\$7m from the same period in 2012.

Regular quarterly dividends of 31.875 cents per share have been declared on HSBC Bank Canada Class 1 Preferred Shares - Series C, 31.25 cents per share on Class 1 Preferred Shares - Series D, 41.25 cents per share on Class 1 Preferred Shares - Series E and 7.75 cents per share on Class 2 Preferred Shares - Series B. Dividends will be paid on 30 June 2013, for shareholders of record on 14 June 2013.

Use of non-IFRS financial measures

HSBC Bank Canada uses certain non-IFRS financial measures to assess its performance. Non-IFRS financial measures are not defined by IFRS and do not have standardized meanings that would ensure consistency and comparability between companies using these measures. The following non-IFRS financial measures are used throughout this document and are defined below:

Return on average common equity - Profit attributable to common shareholders on an annualized basis divided by average common equity, which is calculated using month-end balances of common equity for the period.

Post-tax return on average assets - Profit attributable to common shareholders on an annualized basis divided by average assets, which is calculated using average daily balances for the period.

Post-tax return on average risk weighted assets - Profit attributable to common shareholders on an annualized basis divided by the average monthly balances of risk weighted assets for the period. Risk weighted assets are calculated using guidelines issued by OSFI in accordance with the Basel III capital adequacy framework (2012: Risk weighted assets are calculated using the guidelines issued by OSFI in accordance with the Basel II capital adequacy framework).

Cost efficiency ratio - Calculated as total operating expenses for the period divided by net operating income before loan impairment charges and other credit risk provisions for the period.

Adjusted cost efficiency ratio - Cost efficiency ratio adjusted to exclude gains and losses from financial instruments designated at fair value from net operating income before loan impairment charges.

Net interest income, net fee income and net trading income as a percentage of total operating income - Net interest income, net fee income and net trading income for the period divided by net operating income before loan impairment charges and other credit risk provisions for the period.

Ratio of customer advances to customer accounts - Loans and advances to customers divided by customer accounts, using period-end balances.

Average total shareholders' equity to average total assets - Average shareholders' equity is calculated using month-end balances of total shareholders' equity for the period and average total assets are calculated using average daily balances for the period.

Assets under administration - These are assets administered by the bank on behalf of our customers. The bank does not recognise these assets on its consolidated statement of financial position because our customers are the beneficial owners.

Liquid assets - These assets include high grade financial investments and reverse repurchase agreements of which a certain amount is pledged as collateral to secure recognized liabilities and contingent obligations within payment and depository clearing systems.

Caution concerning forward-looking statements

This document contains forward-looking information, including statements regarding the business and anticipated actions of HSBC Bank Canada. These statements can be identified by the fact that they do not pertain strictly to historical or current facts. Forward-looking statements often include words such as 'anticipates', 'estimates', 'expects', 'projects', 'intends', 'plans', 'believes', and words and terms of similar substance in connection with discussions of future operating or financial performance. By their very nature, these statements require us to make a number of assumptions and are subject to a number of inherent risks and uncertainties that may cause actual results to differ materially from those contemplated by the forward-looking statements. We caution you to not place undue reliance on these statements as a number of risk factors could cause our actual results to differ materially from the expectations expressed in such forward-looking statements. These risk factors - many of which are beyond our control and the effects of which are difficult to predict - that could cause such differences include: capital management, credit, liquidity and funding, market, structural, and operational risks all of which are discussed in the Risk Management section in the Management's Discussion and Analysis of our Annual Report and Accounts 2012. Additional risk factors include: the impact of changes in laws and regulations including relating to the Dodd-Frank Wall Street Reform and Consumer Protection Act and the regulations issued and to be issued thereunder, the Basel Committee on Banking Supervision's global standards for capital and liquidity reform, over-the-counter derivatives reform in Canada; technological changes and security; global capital market activity; the effects of changes in government monetary and economic policies; changes in prevailing interest rates; inflation levels; and the general business and economic market conditions in Canada and in geographic areas where we operate. Canada is an extremely competitive banking environment, and pressures on our net interest spread may arise from actions taken by individual banks or other financial institutions acting alone. Varying economic conditions may also affect equity and foreign exchange markets, which could also have an impact on our revenues. We caution you that the risk factors disclosed above are not exhaustive, and there could be other uncertainties and potential risk factors not considered here which may adversely affect our results and financial condition. Any forward-looking statements in this document speak only as of the date of this document. We do not undertake any obligation to, and expressly disclaim any obligation to, update or alter our forward-looking statements, whether as a result of new information, subsequent events or otherwise, except as required under applicable securities legislation.

About HSBC Bank Canada
