Incorporated in the Republic of South A f r i c a

CERTAIN FORWARD-LOOKING STATEMENTS

Certain statements contained in this document, including without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices and production, the completion and commencement of commercial operations of certain of the company's exploration and production projects, and the company's liquidity and capital resources and expenditure, contain certain forward-looking statements regarding the company's operations, economic performance and financial condition. Although the company believes that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic and market conditions, success of business and operating initiatives, changes in the regulatory environment and other government actions, fluctuations in gold prices and exchange rates, and business and operational risk management.

LETTER FROM THE CHAIRMAN

AND THE CHIEF EXECUTIVE OFFICER

Dear Shareholder

ANGLOGOLD FOURTH QUARTER AND 1999 ANNUAL RESULTS

AngloGold today reports a good set of annual results, but a disappointing fourth quarter.

For the 1999 financial and calendar year, headline earnings (adjusted for a change in the tax rate) to R1.9 billion, gold production has increased by 5%, while both cash costs and total costs have increased. Return on capital employed at 12% and on shareholders' equity at 15% demonstrate that this company generates returns for its shareholders even in the weakest of gold markets. The company is pleased to announce a dividend of R11, for a total dividend of R20 for 1999, 29% up on 1998.

In this fourth quarter, headline earnings (before the deferred tax rate adjustment) declined by 6% (\$79.5 million), gold produced by 5%, with cash costs increasing to \$223 (7% up), and total costs by 1%. The company received a gold price of \$319, 1% higher than the previous quarter.

The reduced production was anticipated in the operations in the Americas, and in Mali. The South African decline of 4% quarter on quarter is disappointing and is the focus of management attention at both the division and corporate level. More detailed reasons for this decline are set out elsewhere in this letter.

Looking forward, with the acquisition of Acacia, AngloGold now produces some 1.5 million ounces of gold from shallow mining (approximately 20% of total production). This represents a significant change in the company's operational risk profile and signals a positive development for all of AngloGold's stakeholders - shareholders, communities and governments. The company will be energetically exploring further opportunities to diversify its geographical and mining mix in 2000.

The past year saw an increase in capital expenditure, mainly in the South African operations. Here, several new projects, all of which have recently been subjected to rigorous technical and financial reviews, are expected to produce 25 million ounces of gold, at a projected average cash cost of \$180 per ounce using upgraded and modern technology.

The Washington Agreement on the selling, lending and leasing of gold has seen the price rise sharply to around \$290. The company continues to believe that physical market fundamentals are positive, and that improved market conditions will lead to renewed investor interest in the metal. In 2000 the company will continue to explore innovative ways to expand and deepen these physical markets for our product.

During 1999, the company has intensified its efforts to achieve much safer working conditions at its operations, in particular at the South African operations. The Board and Management realise that much remains to be done, but it is encouraging to report a 25% reduction in fatalities and an 11% reduction in lost time accidents, respectively by 17% and 5% in each case. The Board has high expectations of continued improvement and will continue to take measures at hopefully even faster rates.

NICKY OPPENHEIMER

Chairman

9 February 2000

Edgar Filing: ANGLOGOLD LTD - Form 6-K

SOUTH AFRICA

Overall performance

Gold production decreased by 10% in 1999 to 178.7 tonnes (57 million ounces) against a planned increase of 6%, notwithstanding marginal improvements in both value and volume efficiencies. Rand cash costs were R44 161 per kilogram but decreased by 1% to \$225 per ounce as a result of the devaluation of the Rand.

For the year, Kopanang, Tau Lekoa, Tshepong and Mponeng posted improved performances over both 1998 and the previous year's results. Ergo maintained a steady performance despite a mid-year problem with the

elution building. Great Noligwa intersected the Jersey fault earlier than planned, experiencing a 20% drop in production. Despite this, it exceeded targeted gold production and operating profit levels.

Events at a number of operations hampered production and operating performance, year on year: Matjhabeng

earthquake (2.3 tonnes), fires at Bambanani (0.7 tonnes), the Klippan washout at Joel (0.5 tonnes), a shaft failure at Savuka (1.2 tonnes). TauTona and Deelkraal tabled disappointing results, following the impact of seismicity and infrastructural problems.

After a slow start to 1999, operations improved from mid-year through to the third quarter. In the fourth quarter

production fell by 4% to 43 363 kilograms. This was due to the adverse impact on production of in-plant

at TauTona, slower than anticipated start-up at the Matjhabeng's Eland shaft, the impact of the fire at Ergo and the seismic events at West Wits operations. On the cost side, there was unplanned expenditure on infrastructure and to counter equipment failure at both Bambanani and TauTona.

Unit cash costs increased by 7% to R46 665 per kilogram and by 6% to \$237 per ounce. Operating profit was 27% in the fourth quarter to R463.8 million. Productivity measured in square metres per employee was 4.28

4.28, but the adverse gold production resulted in grams per employee falling to 174.

Capital projects

The shaft sinking at Joel has reached 129 level (1 293 metres below surface) and station development is well advanced.

The Mponeng deepening project is progressing well. Sinking operations are complete to 123 level (1 230 metres below surface) and equipping of the SS1 shaft have begun. Development of the top cut in the 81 level chamber has also started.

The Moab Khotsong project continues to progress well. The work in the rock/ventilation and main shaft has been completed at acceptable rates with no problems envisaged.

The carbon technology project at West Wits is functionally complete with minor work still to be done on the residue thickener.

The sub shaft deepening at Elandsrand has been completed. The major remaining components are access road development on 102, 105, 109 and 113 levels (3 000, 3 200, 3 400 and 3 800 metres, respectively) and shaft development. A total of 6 014 metres is planned for the 2000 financial year.

OTHER AFRICAN OPERATIONS

Edgar Filing: ANGLOGOLD LTD - Form 6-K

AngloGold has a 38% interest in the Sadiola mine in Mali and a 100% interest in the Navachab mine

For the year, Sadiola increased production by 7% over 1998 to 206 000 attributable ounces. This, decrease in cash costs to \$102 per ounce, resulted in a 2% increase in operating profit for the y

As reported previously grades at Sadiola for the fourth quarter were unlikely to be as high as th

the record third quarter. Though throughput increased by 3% to 560 tonnes, a lower average recove

3. 7 grams per tonne for the quarter, together with lower metallurgical recoveries, resulted in a production decreasing by 15% to 51 000 ounces. Cash costs increased by 23% to \$108 per ounce larg

the fall in gold production.

The feasibility study for Yatela has been completed and the AngloGold Board has approved capital

\$76 million for the development of this mine. The Board's approval is subject to the successful c negotiations with the Mali Government and the completion of financing for the project. Situated 2

Edgar Filing: ANGLOGOLD LTD - Form 6-K

north of Sadiola, Yatela will be an open-pit operation with an ore treatment rate of 2.5 million tonnes per year to produce 1.2 million ounces of gold over a five-year period at a cash cost of \$175 per ounce. Construction is to begin in May 2000 with the first gold production during May 2001. AngloGold will hold a 40% share in the venture with IAMGOLD holding 40% and the Mali Government 20%. AngloGold will manage the operation through its Mali-registered company AngloGold Services Mali SA (ANSER).

In 1999, production at Navachab increased by 8% over 1998 to 65,000 ounces. Cash costs decreased to \$240 per ounce, although much of this improvement was attributable to the devaluation of the Namibian dollar.

Navachab had a good quarter with production increasing by 19% to 19,000 ounces, resulting in unit cash costs decreasing by 10% to \$217 per ounce.

While the problems reported during the previous quarter may still limit further investment at Navachab, a western extension has been granted for a western extension to the pit that will extend the life of Navachab to the year 2001. An eastern extension has been delayed until 2001.

NORTH AMERICA

These operations comprise AngloGold's 70% interest in the Jerritt Canyon joint venture and the 67% interest in the Cripple Creek & Victor joint venture. In their first year as part of AngloGold, these operations have performed well by producing 485,000 ounces at a cash cost of \$173 per ounce.

In aggregate, the North American operations had a difficult production quarter. Gold production was 129,000 attributable ounces, despite an excellent performance at Jerritt Canyon. A creditable cost reduction program, though, ensured that unit cash costs were well maintained at \$162 per ounce, 8% lower than the previous quarter. As a result of higher head grades and plant throughput, Jerritt Canyon enjoyed a much improved performance in terms of gold production and cash costs per ounce. In November 41,300 ounces were produced, a 10% increase in production for this operation. Cash costs per ounce were \$30 lower than in the previous quarter, a result of improved production as well as the benefit of cost containment measures.

The long history of surface mining at Jerritt Canyon came to a close with the depletion of reserves at the open-pit. Mining is now concentrated at the two underground mines, SSX and Murray, with two new underground mines, MCE and Smith, under development. This quarter saw Jerritt Canyon suffer its single minor lost time injury for the year. Employee productivity improved, aided by the new underground truck fleet introduced earlier in the year. At Cripple Creek & Victor, contrary to process model predictions, a substantial dip in process efficiency was experienced during the latter half of the quarter. This resulted in the gold production being less than that achieved in the previous quarter.

On the positive side, there were no lost time accidents reported during the fourth quarter and the

Edgar Filing: ANGLOGOLD LTD - Form 6-K

single minor lost time accident reported in July. Despite an ongoing cost containment programme, productivity measures declined owing to the relatively low metal production.

Good progress was made with the East Cresson Pit capital project and the synthetic liner was placed in the Heap Leach Facility Phase 2A extension. Earthworks associated with Phase 3 were completed and, following installation in mid-2000, first production is expected in the latter months of 2000.

SOUTH AMERICA

These operations comprise AngloGold's 100% interest in the Morro Velho mines and the 50% interest in the Cerro Vanguardia mines, both in Brazil, as well as the 46.25% interest in Cerro Vanguardia mine in southern Argentina. Operations, also in their first year as part of AngloGold, exceeded expectations by producing 425,000 ounces of creditable \$128 per ounce.

Production at each of the three operations decreased from the previous quarter. In aggregate, the decline was 11%. Cash costs, though, were maintained at levels similar to the previous quarter at \$128 per ounce.

During December, modifications to the milling circuit at Serra Grande plant were completed, which increased throughput by 17% to 700,000 tonnes per annum.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

At Cerro Vanguardia, with the exception of the throughput constraints associated with the primary the other operational problems associated with the plant as previously reported have been overcome a record monthly tonnage treated of 66 297 tonnes for December. Work on the primary crusher section

The Completion Certificates of the Senior Lender Technical Completion Tests as submitted to the lenders have been accepted.

Safety performance at the three operations continues to be monitored with five lost time accidents compared with seven in the previous quarter.

In addition to the two previously reported exploration joint venture agreements, an agreement has been signed with Conquistador Mines to pursue exploration prospects in Colombia. During November, an exploration program was opened in Lima, Peru, to take advantage of this region's high gold prospectivity. Other exploration programs in South America continues to be centred on the existing mine exploitation areas and in Brazil and Argentina.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

The gold price rallied in reaction to the announcement on 26 September 1999 by members of the European Central Bank, supported by Great Britain and Switzerland, of a ceiling of 2 000 tonnes of gold sales by the group over the next five years, and no increases to current levels of gold lending by the group. The rally carried the gold price to a recorded high of \$338 per ounce during the final quarter of 1999, This peak was over \$80 or 30% above the price at which the metal traded in mid-September. Inevitably, the market has corrected for this sharp rise.

The final quarter trading at around \$290 per ounce. A brief rally above \$300 early in February emphasises the volatility of the gold market.

The underlying investor interest in the metal since the change in sentiment during the final quarter of 1999. The average spot price of \$295 per ounce for the final quarter of the year compares favourably with the average price of \$259 per ounce for the previous quarter, and \$278 for the year as a whole.

The announcement by the European Central Bank members, coming on the heels of arrangements entered into by

the International Monetary Fund to avoid the sale of a portion of its holdings into the open market, has provided the gold market with a most important reassurance of the concern felt by the official sector over negative

sentiment in the gold market over official sales, and of the official sector's desire to eliminate that distortion. To a considerable degree, this reassurance has been effective in eliminating the kind of scaremongering which

has affected this market in recent years. New sales of gold by the Dutch Central Bank announced late in the year have been accepted by the market and absorbed without negative effect as being part of the announced official

sales from that sector.

The sharp rise in the spot price of the metal had an unavoidably negative effect on physical demand for gold.

Physical demand in major developing markets for the metal, particularly in India and the Middle East, where demand is highly price sensitive. As the spot price returned to \$300 per ounce, so sales of bullion scrap from the Middle East resumed and buying interest returned; overall, we expect that final demand figures for gold for 1999 will be in line with the encouraging trend.

The overall trend is an encouraging trend.

The volatility in the gold price during the final quarter was increased by uncertainty in the market, particularly

in the positions of certain gold mining companies with large gold price hedges in proportion to their production of gold, and by a degree of disorder in the gold lending market. While the gold lending market has remained

relatively stable, there remains concern about those gold mining companies with credit difficulties brought about by the size of their hedge positions. The nature of these difficulties has provided important lessons for the industry

and for the gold forward markets, and have caused many gold mining companies to consider the nature and approach to

their gold price hedge positions.

The AngloGold net open hedge position as at the end of 1999 shown below reflects a lower level of hedging than that reported at the end of the third quarter of 1999. The additional table of all open positions as at

31 December 1999 provides for the first time the details of both forward and option contracts in the gold market

with the net delta of all open positions previously reported by the company. The hedge position is broken down by type of contract included. All gold lease rates in this open position were fixed over the year-end. Going forward, the gold price

is expected to be stable, the forward positions have gold lease rates fixed through to maturity; the gold lease rate is fixed at the

current market

Edgar Filing: ANGLOGOLD LTD - Form 6-K

Net Delta Open Hedge Position as at 31 December 1999

As at 31 December 1999, the company had outstanding the following net forward pricing commitments

production. A portion of these sales consists of US dollar-priced contracts which have been converted at an average annual forward rand values based on a spot rand/dollar rate of 6.14 available on 31

Edgar Filing: ANGLOGOLD LTD - Form 6-K

1. The audited financial results have been prepared in accordance with International Accounting Standards. Certain items for the previous quarter have been restated for comparative purposes. The attributable profit previously reported for the September quarter remains unchanged.
2. With effect from 7 February 2000, AngloGold acquired 100% of the issued share capital of Acacia Resources Limited (Acacia), a gold company operating in Australia. This followed the close of the offer on 24 December 1999 and the subsequent compulsory acquisition of the shares held by those shareholders who had not accepted the offer. The results of Acacia to 31 December 1999 have not been consolidated. However, the Group Balance Sheet as at December 1999 includes the assets and liabilities of Acacia.
3. During the quarter, 8 659 379 ordinary shares were allotted to Acacia shareholders at a price of R2.98 per share and 32 050 ordinary shares were allotted in terms of the Share Incentive Scheme, thereby increasing the number of ordinary shares in issue at 31 December 1999 to 106 614 678.

Since the end of the quarter there were allotments of 351 009 ordinary shares at a price of R2.98 per share to complete the acquisition of Acacia and 2 200 ordinary shares in terms of the Share Intensive Scheme. The number of ordinary shares in issue at the date of this report totalled 106 967 887, which includes 9 010 388 shares issued for the acquisition of Acacia and in respect of which application has been made for a listing on the Johannesburg Stock Exchange.

4. Earnings per share have been calculated using the weighted average number of shares in issue.
5. Orders placed and outstanding on capital contracts as at 31 December 1999 totalled R381.8 million, equivalent to US\$62.0 million at the rate of exchange ruling on that date.
6. Year 2000
All operations of the company reported a smooth transition into the year 2000. Costs incurred to end December 1999 to achieve this status, exclusive of expenditure on planned upgrades, internal manpower and certain outsourcing charges, amounted to R15 million.

7. Dividend

The directors have today declared Final Dividend No. 87 of 1 100 (1998; 800) South African cents share for the year ended 31 December 1999 Payment details are as follows:

To registered holders of ordinary shares

Ex-dividend date

Monday, 10 April

For illustrative purposes, the dividend payable on an American Depositary Share was equivalent to (1998: 63.85) US cents at the rate of exchange ruling on Tuesday, 8 February 2000.

8. Additional information, which is not material, is to be disclosed to the Australian Stock Exchange in accordance with the ASX's listing rules. This information will be available on the Internet and in printed format. Details of the company's public relations contacts, whose details, along with the company's website address, appear at the end of this document.
