Item 5. Other Events.

Fourth Quarter and Full Year 2001 Preliminary Unaudited Results

Unocal Corporation's preliminary results for the fourth quarter of 2001 were a

Edgar Filing: UNOCAL CORP - Form 8-K

net loss of \$29 million, or 12 cents per share (diluted). This compared to net earnings of \$173 million, or 70 cents per share (diluted), for the fourth quarter of 2000.

Millions of dollars	For the Three Months Ended December 31,		For the Twelve Months Ended December 31,	
	2001	2000	2001	2000
Earnings (loss) from continuing operations	\$ (30)	\$ 173	\$ 599	\$ 723
Earnings from discontinued operations	1	-	17	37
Cumulative effect of accounting change	-	-	(1)	-
Net earnings (loss)	\$ (29)	\$ 173	\$ 615	\$ 760

Continuing operations resulted in a loss of \$30 million, or 13 cents per share (diluted), in the fourth quarter of 2001 compared to \$173 million, or 70 cents per share (diluted), for the same period a year ago. The decrease was primarily due to lower prices for natural gas and liquids (crude oil, condensate and natural gas liquids). The Company's worldwide average natural gas price was \$2.42 per thousand cubic feet (mcf) in the fourth quarter of 2001, which was a decrease of \$1.34 per mcf, or 36 percent, from the same period a year ago. In the fourth quarter of 2001, the Company's worldwide average liquids price was \$17.90 per barrel in the fourth quarter of 2001, which was a decrease of \$10.22 per barrel, or 36 percent, from the same period a year ago. The fourth quarter of 2001 was also negatively impacted by an \$86 million non-cash after-tax charge for impairment of certain Gulf of Mexico shelf properties, due principally to lower commodity prices. The fourth quarter of 2001 also included a \$17 million after-tax gain from the sale of a Gulf of Mexico production property. In addition, the fourth quarter of 2001 benefited from \$18 million in after-tax earnings related to participation payments from the Company's former agricultural products business and the Company's former oil and gas operations in California and \$15 million after-tax reduction in executive compensation expense. The fourth quarter of 2000 included a \$33 million after-tax charge to write-down the Company's investment in the Questa, New Mexico, molybdenum mining operation and \$26 million in charges covering deferred income tax adjustments and a provision for prior years income tax matters. In addition, earnings from continuing operations in the fourth quarter of 2001 and 2000 included \$24 million and \$28 million, respectively, in after-tax provisions for litigation and environmental matters.

Earnings from discontinued operations were \$1 million in the fourth quarter of 2001, while there were no earnings from discontinued operations in the fourth quarter of 2000. The \$1 million after-tax benefit was related to the 1997 sale of the Company's former West Coast refining, marketing and transportation assets. The sales agreement covers price differences between California Air Resources Board Phase 2 gasoline and conventional gasoline. The maximum potential payments under this sales agreement are capped at \$100 million and extend to 2003. To date, the Company has earned approximately \$27 million (pre-tax) related to the agreement, all of which was recorded in 2001.

For the full year 2001, the Company's preliminary net earnings were \$615 million, or \$2.50 per share (diluted), with \$599 million from continuing operations, \$17 million from discontinued operations, and a loss of \$1 million from the cumulative effect of an accounting change. This compared to \$760 million, or \$3.08 per share (diluted), for the same period a year ago, with \$723 million from continuing operations and \$37 million from discontinued operations.

Edgar Filing: UNOCAL CORP - Form 8-K

Earnings from continuing operations in 2001 totaled \$599 million, which was a decrease of \$124 million from a year ago. This decrease was primarily due to lower worldwide average liquids prices and the fourth quarter \$86 million after-tax impairment charge. Higher worldwide average natural gas prices and higher natural gas production partially offset these two negative factors. The Company's worldwide average liquids price was \$22.31 per barrel in 2001, which was a decrease of \$3.79 per barrel, or 15 percent, from a year ago. In 2001, the Company's worldwide average natural gas price was \$3.25 per mcf, which was an increase of 29 cents per mcf, or 10 percent, from a year ago. The Company's worldwide natural gas production increased by 9 percent from a year ago, primarily due to higher natural gas production from the U.S. Lower 48 and Far East operations. The full year 2001 results also benefited from the \$17 million after-tax gain from the sale of a Gulf of Mexico production property and from a \$10 million after-tax gain in mark-to-market accruals for non-hedge commodity derivatives. The results in 2000 included a \$55 million after-tax benefit from payments received for infringement of one of the Company's five reformulated gasoline patents during a five-month period in 1996, a \$42 million after-tax gain from the Pure Resources, Inc. (Pure) transaction and a \$21 million after-tax gain related to an insurance recovery. These gains in 2000 were offset by \$48 million in after-tax losses related to the mark-to-market accruals for non-hedge commodity derivatives, the \$33 million after-tax charge to write-down the Company's investment in the Questa, New Mexico molybdenum mining operation and \$11 million after-tax in restructuring costs. In addition, earnings from continuing operations in 2001 and 2000 included \$95 million and \$99 million, respectively, in after-tax provisions for litigation and environmental matters.

Earnings from discontinued operations were \$17 million, or 7 cents per share (diluted), in 2001 compared to \$37 million, or 15 cents per share (diluted), in 2000. The 2001 amount related to the Company's sale of its former West Coast refining, marketing and transportation assets. The 2000 amount reflected the gain on disposal of the Company's former agricultural products business, which was sold in late 2000.

In 2001, the Company recorded a one-time non-cash \$1 million after-tax charge consisting of the cumulative effect of a change in accounting principle related to the initial adoption of Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities".

Total revenues from continuing operations for the fourth quarter of 2001 were \$1.3 billion, compared with \$2.8 billion for the fourth quarter of 2000. Total revenues from continuing operations for the full year of 2001 were \$6.8 billion, compared with \$9.2 billion for the full year of 2000. The lower 2001 revenues primarily reflected reduced crude oil trading activity by the Company's Trade segment, as well as lower commodity prices.

Capital expenditures, excluding major acquisitions, for the fourth quarter of 2001 were \$473 million, compared with \$430 million for the fourth quarter of 2000. In the fourth quarter of 2001, the Company's major acquisitions included \$113 million to acquire a portion of Forest Oil Corporation's interests in certain Gulf of Mexico shelf properties, while the fourth quarter of 2000 major acquisitions included \$157 million to acquire additional interests in the Makassar Strait and Rapak production-sharing contract areas in Indonesia.

Capital expenditures, excluding major acquisitions, for the full year of 2001 were \$1.73 billion, compared with \$1.3 billion for full year of 2000. Major acquisitions in 2001 included Pure's acquisition of properties from International Paper Company for \$266 million and its cash outlay of \$171 million for the acquisition of all the shares of Hallwood Energy Corporation. In

Edgar Filing: UNOCAL CORP - Form 8-K

2001, major acquisitions also included a \$93 million cash outlay made by the Company's Northrock Resources Ltd. (Northrock) subsidiary to acquire all the shares of Tethys Energy Inc. and the aforementioned \$113 million acquisition from Forest Oil. Major acquisitions in 2000 included the aforementioned \$157 million and \$161 million for the acquisition of the remaining Northrock common shares.

-2-

The Company's total debt, including current maturities, at the end of 2001 was \$2.91 billion, compared with \$2.51 billion at the end of 2000. The debt-to-total capitalization ratio was 44 percent at the end of 2001 remaining unchanged from year-end 2000.

OPERATING HIGHLIGHTS

Effective with the first quarter of 2001, the Company began reporting all production pursuant to production sharing contracts on the net-economic interests basis, which excludes host country shares. In previous reporting, production had included host country shares in Indonesia and the Democratic Republic of Congo. The Company also began reporting natural gas production on a dry basis, with natural gas liquids now included with crude oil and condensate production volumes. The production and price data for 2000 in the table on the following page reflect these reclassifications.

-4-

2001 Reserve Replacement and FD&A Results

The Company replaced 222 percent of its worldwide crude oil and natural gas production during 2001 with new proved reserves. At year-end 2001, Unocal's preliminary estimate of worldwide proved reserves totaled 1.81 billion barrels-of-oil-equivalent (BOE), up 15 percent from 1.58 billion BOE at year-end 2000.

The Company booked its first reserves from the Mad Dog field, a new deepwater development in the Gulf of Mexico, and added to its reserves in Azerbaijan, Thailand, Indonesia, the Gulf of Mexico region, onshore Texas and Alaska through the drillbit.

During 2001, the Company added reserves of 241 million BOE from discoveries and extensions and improved recovery. Reserve acquisitions onshore Texas, on the

Edgar Filing: UNOCAL CORP - Form 8-K

Gulf of Mexico shelf, and in Brazil and Canada totaled 113 million BOE. The Company also made net upward revisions of 80 million BOE because of price effects and reservoir performance. Because of cost-recovery provisions in certain production-sharing contracts, the Company's reserves increase when prices decline and decrease when prices increase. Production of 193 million BOE and the sale of 5 million BOE partially offset the reserve increases.

For the year, the Company's preliminary estimated worldwide finding, development and acquisition (FD&A) costs for new reserves were \$6.18 per BOE.

Details of estimated proved reserves and finding, development and acquisition costs will be published in the Company's 2001 Annual Report on Form 10-K in March 2002.

Unocal preliminary estimated proved reserves of crude oil and natural gas (MMBOE)

As of December 31, 2000	1,578
Discoveries and extensions	228
Improved recovery	13
Revisions	80
Purchases	113
Sales	(5)
Production	(193)
As of December 31, 2001	1,814

Unocal's reserves reflect a change in the reporting method for reserves and production in Indonesia and the Democratic Republic of Congo that was initiated in 2001. All production-sharing contracts are now reported on the economic interest method, which excludes host-country shares. The year-end 2000 reserves have been reclassified to reflect this change. The year-end 2000 and 2001 reserves include amounts attributable to minority interests in consolidated subsidiaries of 69 MMBOE and 97 MMBOE, respectively.

-5-

First Quarter and Full Year 2002 Outlook

The Company expects its after-tax earnings (excluding special items) per share to be between \$1.10 to \$1.20 for 2002. The Company expects net worldwide daily production for 2002 to average between 510,000 and 520,000 barrels-of-oil-equivalent (BOE) per day. This compares with the Company's prior disclosed forecast of 535,000 BOE per day. The reduction is primarily due to faster than expected declines from the Muni field on Ship Shoal 295 in the Gulf of Mexico and an expected reduction in capital spending in 2002 for short-term production projects in light of current commodity price levels. The Company has made slight revisions to its long-term production forecast but still projects a 6 percent annual growth rate through 2004.

Due to weakness in commodity prices, especially in NYMEX natural gas, and the Company's desire to maintain a strong balance sheet, the Company is reducing its expected capital spending by \$100 to \$150 million from the previously announced \$1.7 billion plan. The Company is prepared to make additional cuts if the commodity price environment weakens further.

The Company intends to focus on longer-term exploration and development activities and high-value, long-term development projects and shift its

Edgar Filing: UNOCAL CORP - Form 8-K

exploration focus on the Gulf of Mexico shelf to deeper, more subtle plays, with significantly higher resource potential and where it has significant competitive advantages.

The Company plans to drill 8 to 10 net deep shelf exploration wildcats in 2002, with activity increasing in the second half of the year. The capital cuts are mainly focused on development and exploitation activities in North America that would yield near-term production increases. The Company has the flexibility to invest additional capital if prices recover or new opportunities arise in areas such as Thailand, which are not subject to NYMEX pricing.

The forecast for full-year 2002 earnings assumes average NYMEX benchmark prices of \$20.00 per barrel of crude oil and \$3.00 per million British thermal units (mmBtus) for North America natural gas. Earnings are expected to change 15 cents per share for every \$1 change in the Company's average worldwide realized price for crude oil and 9 cents per share for every 10-cent change in the Company's average realized North America natural gas price. The forecast also assumes pre-tax dry hole costs of \$130 to \$140 million (62% to 59% success rate). Earnings are expected to change 8 cents per share for each 10-percent change in the overall success rate of the Company's exploration drilling program.

The Company expects after-tax earnings (excluding special items) per share of 10 cents to 15 cents for the first quarter of 2002. The forecast assumes average NYMEX benchmark prices of \$19.35 per barrel of crude oil and \$2.25 per mmBtus for North America gas. In the first quarter of 2002, the Company expects net worldwide production to average between 490,000 and 500,000 BOE per day.

-6-

Alaska Discovery

The Company made a discovery of a new natural gas reservoir on Alaska's Kenai Peninsula. The Grassim Oskolkoff #1 (GO#1) well, the first exploration well drilled under a joint operating agreement between the Company and Marathon Oil Company (Marathon) in the Ninilchik Exploration Unit, indicated significant natural gas accumulations. The GO#1 well is located 35 miles south of Kenai, Alaska, on the Kenai Peninsula. A 39-foot interval in the Miocene formation yielded restricted flow rates of up to 11.2 million cubic feet of gas per day. The zone tested was at 9,822 feet. The well was drilled to a total depth of 11,600 feet. Exploration efforts also continue at several other wells in the unit. Unocal holds a 40 percent working interest in the well and the 25,000-acre Ninilchik Exploratory Unit. Marathon is operator and holds the remaining interest.

The Company also began a separate three-well exploration program on the southern Kenai Peninsula, and it anticipates completing this initial program by May 2002. The Company has acquired a total position in excess of 80,000 net acres. The Company expects to have completed and tested eight wells on the trend -- five wells in the Ninilchik Unit, and three wells on the other Unocal prospects by the end of 2002.

Based on program results, the two companies expect to have sufficient gas resources to support construction of the proposed Kenai-Kachemak pipeline. The two companies formed the Kenai Kachemak Pipeline LLC to develop a natural gas pipeline that would connect the new producing area with the existing south central Alaska pipeline system. Upon completion of the pipeline, newly discovered resources are expected to serve commercial and utility markets in south central Alaska. First production is anticipated to occur in late 2003.

The Company has signed a contract to sell up to 450 billion cubic feet of

Edgar Filing: UNOCAL CORP - Form 8-K

natural gas to ENSTAR Natural Gas Company beginning in January 2004. ENSTAR distributes natural gas to Anchorage, the Matanuska-Susitna Valley, and the Kenai Peninsula. The Regulatory Commission of Alaska approved the Unocal-ENSTAR gas contract in December 2001.

Trident Appraisal Well

The Company completed the first appraisal well at the Trident deepwater Gulf of Mexico discovery in Alaminos Canyon Block 903. The well is located approximately one and a half miles northwest of the original discovery and was drilled to a total depth of 20,500 feet in 9,727 feet of water. The objectives of the appraisal well were to test the downdip extent of the productive intervals found in the Trident discovery well and to gather critical information about reservoir quality.

The appraisal well encountered the same hydrocarbon-bearing intervals found in the discovery well, a favorable indication of lateral reservoir continuity. The well penetrated oil-water transition zones. In one of the key findings, preliminary analysis of the core data confirms the presence of good quality reservoir rock in the key uppermost pay zones in the structure. Tests conducted on oil samples taken from the appraisal well indicate the same fluid quality of 40 (degree) API gravity found in the discovery well, which is an important factor in future development economics.

The Company may drill a second appraisal well at Trident as early as the second half of 2002 and plans to put significant effort into analyzing deepwater development options, including the likely use of Floating Production Storage and Off-Loading (FPSO) technology.

The appraisal well was drilled in 68 days at a gross cost of \$32 million. The Company is the operator and has a 59.5 percent working interest in the prospect.

-7-

Forward-looking statements and estimates regarding projected earnings, commodity prices, dry hole costs, production levels, capital expenditures and other drilling activities, in this filing are based on assumptions about operational, market, competitive, regulatory, environmental, political and other considerations. Actual results could differ materially as a result of factors discussed in Unocal 's 2000 Annual Report on Form 10-K and subsequent reports.

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.
