Supplemental Information:

At September 30, 2006 the Company has \$1,118 of dividends payable.

In 2005, \$100,000 worth of treasury stock was issued in connection with the New England Molders acquisition.

The accompanying notes are an integral part of the consolidated financial statements.

Notes to the Consolidated Financial Statements*1. Basis of Presentation:*

The unaudited interim consolidated financial statements and related notes have been prepared pursuant to the rules and regulations of the Securities and Exchange Commission. Accordingly, certain information and footnote disclosures normally included in complete financial statements prepared in accordance with generally accepted accounting principles have been omitted pursuant to such rules and regulations. The accompanying unaudited interim consolidated financial statements and related notes should be read in conjunction with the consolidated financial statements and notes thereto included in the Arrhythmia Research Technology, Inc. and subsidiary (the Company) Annual Report on Form 10-KSB for the year ended December 31, 2005.

The information presented reflects, in the opinion of the management of the Company, all adjustments necessary for a fair presentation of the financial results for the interim period presented.

The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. Operating results for interim periods are not necessarily indicative of results that may be expected for the entire fiscal year.

2. Inventories:

	September 30,	December 31,
	2006	2005
Inventories consist of the following as of:		
Raw materials	\$ 1,294,744	\$ 526,412
Work-in-process	492,355	413,471
Finished goods	903,625	792,473
Total	\$ 2,690,724	\$ 1,732,356

3. Stock-Based Compensation:

Effective January 1, 2006, the Company adopted the provisions of Statement of Financial Accounting Standards (SFAS) 123R, *Share-Based Payment*, which establishes accounting for equity instruments exchanged for employee services. Under the provisions of SFAS 123(R), share-based compensation cost is measured at the grant date, based on the fair value of the award, and is recognized as an expense over the employee's requisite service period (generally the vesting period of the equity grant). Prior to January 1, 2006, the Company accounted for share-based compensation to employees in accordance with Accounting Principles Board (APB) Opinion No. 25, Accounting for Stock Issued to Employees, and related interpretations. The Company also followed the disclosure requirements of SFAS 123, Accounting for Stock-Based Compensation. The Company elected to adopt the modified prospective transition method as provided by SFAS 123(R) and, accordingly, financial statement amounts for the prior periods presented in the Form 10-QSB have not been restated to reflect the fair value method of expensing share-based compensation.

The Company estimates the fair value of stock options using the Black-Scholes valuation model. Key input assumptions used to estimate the fair value of stock options include the exercise price of the award, the expected option term, the expected volatility of the Company's stock over the option's expected term, the risk-free interest rate over the option's expected term, and the Company's expected annual dividend yield. The Company believes that the valuation technique and the approach utilized to develop the underlying assumptions are appropriate in calculating the fair values of the Company's stock options. Estimates of fair value are not intended to predict actual future events or the value ultimately realized by persons who receive equity awards.

The Company recognized share-based compensation expense of \$6,807 in general and administrative expense for the nine months ended September 30, 2006. A grant of 10,000 options with an exercise price of \$12.42 was made to a Director in August 2006. This grant has a 5 year vesting schedule.

The Company did not recognize compensation expense for employee stock option grants for the nine months ended September 30, 2005, since the Company had previously adopted the provisions of SFAS 123, through disclosure only. The following illustrates the effects on net income and earnings per share for the three and nine months ended September 30, 2005 as if the Company had applied the fair value recognition provisions of SFAS 123 to share-based employee awards.

	Three months ended September 30, 2005	Nine months ended September 30, 2005
Net income as reported	\$ 263,187	\$ 1,137,155
Deduct: Total share-based compensation expense determined under the fair value method (net of related tax effects)	(7,161)	(15,036)
Pro forma net income	\$ 256,026	\$ 1,122,119
Basic earnings per share:		
as reported	\$ 0.10	\$ 0.43
pro forma	\$ 0.10	\$ 0.42
Diluted earnings per share:		
as reported	\$ 0.10	\$ 0.42
pro forma	\$ 0.09	\$ 0.42

Share-based Incentive Plan

At September 30, 2006, the Company had one stock option plan that includes both incentive stock options and non-qualified stock options to be granted to certain eligible employees, non-employee directors, or consultants of the Company. The maximum number of shares currently reserved for issuance is 200,000 shares. The options granted have six-year contractual terms and either vest immediately or vest annually over a five-year term.

At September 30, 2006, there were 40,000 shares available for future grants under the above stock option plan. The weighted average exercise price of options outstanding was \$8.21 at September 30, 2006.

The following table presents the average price and contractual life information about options outstanding and exercisable at September 30, 2006:

Exercise Price	Number of Outstanding Shares	Weighted Average Remaining Contractual Life (years)	Options Currently Exercisable
\$ 2.00	18,000	0.47	18,000
4.85	25,000	2.83	15,000
9.86	93,000	5.22	93,000
12.42	10,000	5.85	0

The aggregated intrinsic value of options outstanding and vested at September 30, 2006 was \$883,530 and \$771,030 respectively. The intrinsic value of options exercised during the nine months ended September 30, 2006 was \$4,030.

The following table summarizes the status of Company's non-vested options since December 31, 2005:

<u>Non-Vested Options</u>	
Number of Shares	Weighted Average Fair Value
_____	_____

Non-vested at December 31, 2005	21,000	\$ 0.84
Granted	10,000	6.68
Vested (with intrinsic value of \$78,550)	(11,000)	(1.01)
Forfeited	--	--
<hr/>		
Non-vested at September 30, 2006	20,000	\$ 3.67

At September 30, 2006, there was \$70,641 of total unrecognized cost related to non-vested share-based compensation arrangements granted under the Plan. This cost is expected to be recognized over a weighted average period of 3.3 years.

On April 28, 2005, the Company's Board of Directors adopted the 2005 Stock Award Plan. The Board's objective in adopting the Plan, based on the recommendation of management and approved by the Compensation Committee, was to assist the Company in attracting and retaining the services of certain employees, directors, and consultants deemed to be key and to secure the benefits of the incentive inherent in ownership of the Company's securities. An aggregate of 100,000 shares were available for issuance to employees, directors, and consultants. No awards have been granted under the Stock Award Plan.

4. Recent Accounting Pronouncements:

In June 2006, the FASB issued FASB Interpretation No. 48, *Accounting for Uncertainty in Income Taxes* which is an interpretation of FASB Statement 109, *Accounting for Income Taxes*. FIN 48 requires managements to perform a two-step evaluation of all tax positions, ensuring that these tax return positions meet the more-likely than not recognition threshold and can be measured with sufficient precision to determine the benefit recognized in the financial statements. These evaluations provide management with a comprehensive model for how a company should recognize, measure, present, and disclose in its financial statements certain tax positions that the Company has taken or expects to take on income tax returns. The Company is still evaluating the impact of this pronouncement. FIN 48 is effective for the Company's fiscal year ending December 31, 2007.

In September 2006, the SEC issued Staff Accounting Bulletin No. 108 (SAB 108). SAB 108 addresses how the effects of prior year uncorrected misstatements should be considered when quantifying misstatements in current year financial statements. SAB 108 requires companies to quantify misstatements using a balance sheet and income statement approach and to evaluate whether either approach results in quantifying an error that is material in light of relevant quantitative and qualitative factors. When the effect of initial adoption is material, companies will record the effect as a cumulative effect adjustment to beginning of year retained earnings. The provisions of SAB 108 are effective for the Company's interim reporting period beginning January 1, 2007. The Company does not believe the adoption of SAB 108 will have a material impact on its financial position or results of operations.

In September 2006, the FASB issued SFAS No. 157, *Fair Value Measurements*. SFAS 157 prescribes a single definition of fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The Company does not believe the adoption of SFAS 157 will have a material impact on its financial condition or results of operations. SFAS 157 is effective for the Company's interim reporting period beginning January 1, 2008.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

Forward-Looking Statements

Any forward-looking statements made herein are based on current expectations of the Company, involve a number of risks and uncertainties and should not be considered as guarantees of future performance. The factors that could cause actual results to differ materially include: interruptions or cancellation of existing contracts, inability to integrate acquisitions, impact of competitive products and pricing, product demand and market acceptance risks, the presence of competitors with greater financial resources than the Company, product development and commercialization risks, and changing economic conditions in developing countries. More information about factors that potentially could affect the Company's financial results is included in the Company's filings with the Securities and Exchange Commission, including its Annual Report on Form 10-KSB for the year ended December 31, 2005.

Overview

Arrhythmia Research Technology, Inc. (ART) is engaged in the licensing of medical software, which acquires data and analyzes electrical impulses of the heart to aid in the detection of patients who may be at risk for potentially lethal arrhythmias. Micron Products, Inc. (Micron), a wholly owned subsidiary, is the primary source of consolidated revenues. Micron manufactures disposable electrode sensors used as a component part in the manufacture of integrated disposable electro-physiological sensors. These disposable medical devices are used world wide in the monitoring of electric signals in various medical applications. The Company has previously acquired and integrated into Micron's facility a custom plastic injection molding company now called the New England Molders division (NEM). In January 2006, the Company created a new division called Micron Integrated Technologies (MIT) which provides end-to-end product life cycle management through a comprehensive portfolio of value-added services such as design, engineering, prototyping, manufacturing, machining, assembly and packaging.

Results of Operations

Revenue for the nine months ended September 30, 2006 was \$13,338,035 versus \$9,871,236 for the nine months ended September 30, 2005 representing an increase of 35%. Micron's medical sensors and snaps with silver surcharge contributed \$1,312,000 of the \$3,466,799 total increase in revenue. Sales of high volume precision molded products, assembly machine business and other miscellaneous products decreased by \$386,000. Micron's high volume precision molded products are expected to partially recover in the near future. NEM's custom molded products contributed \$881,000 of the increase in revenue for the first nine months of 2006. MIT's defense industry products contributed \$1,659,000 to the increase in the first nine months of 2006. These revenues have been generated to date on a purchase order to purchase order basis; however, we are actively pursuing long term supply contracts which are expected to be finalized before year end. There were no sales of the Company's SAECG products in the first three quarters of 2006. Non-recurring engineering and tooling revenue accounted for over \$589,000 of the revenues in the nine months ended September 30, 2006. Tooling and engineering revenues typically occur at the beginning of a product life cycle or when a customer changes its manufacturing source. After the design and manufacture of the prototype and/or production tooling, the Company should benefit from product sales as it begins to utilize the customer owned tooling. Some of these programs require production in the newly installed Class 100,000 clean room.

Revenue from domestic and foreign sales for the first nine months is as follows:

	<u>Nine Months Ending Sept. 30,</u>			
	2006	%	2005	%
United States	\$ 5,698,864	43	\$ 3,414,861	35
Canada	4,550,951	34	3,651,597	37
Europe	2,617,891	19	2,341,027	24
Pacific Rim	245,364	2	264,367	2
Other	224,965	2	199,384	2
Total	\$ 13,338,035	100	\$ 9,871,236	100

The shift in distribution of sales to the domestic market was a result of the NEM and MIT divisions' higher percentage of domestic sales, and increases in Micron Products' high volume precision custom molding business.

Cost of sales was 69% of revenue for the nine months ended September 30, 2006 compared to 65% of revenue for the same period in 2005. Material cost in the NEM and the MIT divisions are a higher percentage of revenue than Micron's historical cost of sales. The cost of labor and manufacturing overhead including the cost of electricity, resin and other material costs continue to rise. Unusual costs associated with the initial setup of production, higher costs to shorten production lead times, and higher transportation expenses for the products of the MIT division contributed to the increased overhead expense. Constraints on our ability to increase our prices in the competitive global marketplace hinder passing material cost increases to our customers, excluding the escalating cost of silver. The higher cost of silver impacts the cost of the normal production losses in the manufacturing of silver coated sensors. The Company sells the production and prototype molding tools that it designs and qualifies for production of plastic components. These tools have a significantly lower margin than the product the tool produces. Management continues to investigate strategies to stabilize the overall gross margin without sacrificing product quality.

Selling and marketing expense was \$424,525 for the nine months ended September 30, 2006 as compared to \$392,658 for the same period in 2005. Selling and marketing expense was 3% of revenue in the nine months ended September 30, 2006 as compared to 4% of revenue for the same period in 2005. Selling expense is expected to increase due to commission agreements with the sales force as the Company continues to see positive results from their business development efforts.

General and administrative expense was \$1,288,329 for the nine months ended September 30, 2006 as compared to \$1,290,345 for the same period in 2005. During the nine months ended September 30, 2006, a non-recurring expense of \$109,910 was incurred for additional audit fees associated with the former auditor's review and transition cost. This cost and an increase in other miscellaneous corporate expenses in 2006 are comparable to the one time \$190,000 expense incurred in September of 2005. The cost associated with the internal control documentation necessary to comply with Section 404 of the Sarbanes Oxley Act due to an extension of the implementation date is expected to begin in the fourth quarter of 2006.

Research and development expense was \$50,144 for the nine months ended September 30, 2006 as compared to \$25,015 for the same period in 2005. Although base development work on Predictor[®]7 has been completed, product testing costs were expended to support the previously reported NIH study utilizing ART's proprietary Signal Averaged ECG products and patented algorithms.

Other income, net was \$14,500 for the nine months ended September 30, 2006 as compared to \$12,928 for the same period in 2005. The doubling of interest income from the Company's cash balance in the first nine months of 2006 as compared to 2005 partially offset the loss associated with the retirement of a direct financed customer tool, and a loss from the replacement of older factory equipment.

Income taxes as a percent of income before income taxes were 34% and 36% for the nine months ended September 30, 2006 and 2005, respectively. The lower effective tax rate includes the benefit from research and development tax credits. In addition to the previously reported real estate transactions, the Company has been advised that it has been granted 5% investment and a 10% abandoned building tax credit from the Commonwealth of Massachusetts for the purchase and rehabilitation of properties abutted to the Fitchburg complex. The tax credits will be applicable for the acquisition, improvement, and installation of real properties and equipment associated with our operations for a period of 5 years. Management will continue to seek to implement any tax planning opportunities that could effectively reduce the Company's income tax provision in the future.

Liquidity and Capital Resources

Working capital was \$6,680,713 at September 30, 2006 compared to \$5,386,899 at December 31, 2005, an increase of \$1,293,814. The growth in revenues and profits contributed to the increase in working capital. The increase in accounts payable of over \$1,500,000 was in part due to the nearly \$768,000 increase in raw materials which included materials associated with the MIT division and a large resin delivery for Micron's sensors. The delivery of parts and the shipment of product related to the MIT division began late in the third quarter and is reflected in the unusually high receivables and payables. Other increases in payables include payments required under the NIH research agreement, milestone payments for tooling and other deposits required for capital equipment purchases. Our largest capital equipment vendor has extended unusually long terms with spreading the payments for the equipment over two years. The total commitment for this equipment is approximately \$297,000 although only 2 of the 4 machines are installed and in service.

Net capital expenditures were \$907,000 for the first nine months of 2006 as compared to \$530,544 for the same period in 2005. The majority of the capital expenditures in the first nine months of 2006 was for the acquisition of additional production machinery and equipment, including upgrades in and replacement of existing machinery and tooling and the installation of a Class 100,000 clean room. Capital investment could decrease working capital further with any future acquisition of assets, businesses, or significant expansion of production capacity. After the close of the quarter, the Company intends to purchase \$600,000 worth of real estate abutting the existing complex adding in excess of 50,000 sq ft of space.

The Company has an unsecured \$1,000,000 credit line with a large multinational bank. No funds have been drawn down on the line as of September 30, 2006 or December 31, 2005.

The Company expects to meet cash demands for its operations at current levels with current operating cash flows for the foreseeable future.

Inflation

The Company believes that inflation in raw materials and energy in the global economy has begun to affect results of operations, especially with regard to silver used in the Micron operation. While silver pricing has historically been passed on to our customers in the form of a surcharge, this does not preclude the Company from pricing pressure on its products. Silver surcharge collected from our customers is less than 18% and 10% of net sales for the periods ending September 30, 2006 and 2005, respectively.

Critical Accounting Policies

The preparation of financial statements and related disclosures in conformity with generally accepted accounting principles requires management to make judgments, assumptions and estimates that affect the amounts reported. Certain of these significant accounting policies are considered to be critical accounting policies, as defined below.

Edgar Filing: ARRHYTHMIA RESEARCH TECHNOLOGY INC /DE/ - Form 10QSB

A critical accounting policy is defined as one that is both material to the presentation of the Company's financial statements and requires management to make difficult, subjective, and complex judgments that could have a material effect on the Company's financial condition and results of operations. Specifically, critical accounting estimates have the following attributes: 1) the Company is required to make assumptions about matters that are highly uncertain at the time of the estimate; and 2) different estimates the Company could reasonably have used, or changes in the estimate that are reasonably likely to occur, would have a material effect on the Company's financial condition or results of operations.

Estimates and assumptions about future events and their effects cannot be determined with certainty. The Company bases its estimates on historical experience and on various other assumptions believed to be applicable and reasonable under the circumstances. These estimates may change as new events occur, as additional information is obtained and as the Company's operating environment changes. These changes have historically been minor and have been included in the consolidated financial statements as soon as they became known. In addition, management is periodically faced with uncertainties, the outcomes of which are not within its control and will not be known for prolonged periods of time. These uncertainties are discussed in the section above entitled "Forward-looking Statements." Based on a critical assessment of its accounting policies and the underlying judgments and uncertainties affecting the application of those policies, management believes that the Company's consolidated financial statements are fairly stated in accordance with generally accepted accounting principles, and present a meaningful presentation of the Company's financial condition and results of operations.

Management believes that the following are critical accounting policies:

Revenue Recognition and Accounts Receivable

Revenues from the sale of products are recorded when the product is shipped, title and risk of loss have transferred to the purchaser, payment terms are fixed or determinable and payment is reasonably assured.

The financing of customer purchased tooling utilizes the direct financing method of revenue recognition. This requires the gain or loss on the sale of the tooling to be recorded at the time the tool is put into service while the expected payments are reflected as a lease receivable.

Based on management's on-going analysis of accounts receivable balances, and after the initial recognition of the revenue, if an event occurs which adversely affects the ultimate collectibility of the related receivable, management will record an allowance for the bad debt. Bad debts have not had a significant impact on the Company's financial condition, results of operations or cash flows.

Inventory and Inventory Reserves

The Company values its inventory at the lower of cost or market. The Company reviews its inventory for quantities in excess of production requirements, obsolescence and for compliance with internal quality specifications. Any adjustments to inventory would be equal to the difference between the cost of inventory and the estimated net market value based upon assumptions about future demand, market conditions and expected cost to distribute those products to market. If actual market conditions are less favorable than those projected by management, additional inventory reserves may be required.

The Company maintains a reserve for excess, slow moving and obsolete inventory as well as inventory with a carrying value in excess of its net realizable value. A review of inventory on hand is made at least quarterly and a provision for excess, slow moving and obsolete inventory is recorded. The review is based on several factors including a current assessment of future product demand, historical experience and product expiration.

Deferred Tax Assets

The Company assesses its deferred tax assets based upon a more likely than not to be realized criteria. The Company considers future taxable income and ongoing prudent and feasible tax planning strategies in assessing the need for a valuation allowance.

Asset Impairment Goodwill

The Company reviews the valuation of goodwill and intangible assets to assess potential impairments on an annual basis. Management evaluates the carrying value of goodwill and other intangible assets in accordance with the guidelines set forth in SFAS 142. The value assigned to intangible assets is determined by a valuation based on estimates and judgment regarding expectations for the success and life cycle of products acquired. To test for impairment, present values of an estimate of future discounted cash flows related to the intangible assets are calculated and compared to the value of the intangible asset. Impairment may have a material adverse effect on the Company's financial condition or results of operations. There was no impairment at September 30, 2006.

Asset Impairment Long Lived Assets

The Company assesses the impairment of long-lived assets whenever events or changes in circumstances indicate that the carrying value may not be fully recoverable. When it is determined that the carrying value of such assets may not be recoverable, the Company generally measures any impairment based on projected undiscounted future cash flows attributed to the asset and its carrying value. If the carrying value exceeds the future discounted cash flows, an impairment would be recorded.

Item 3. Controls and Procedures

As of the end of the period covered by this Quarterly Report the Company's management, with the participation of the Company's Chief Executive Officer and Chief Financial Officer (the Certifying Officers), conducted evaluations of the Company's disclosure controls and procedures. As defined under Sections 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934, as amended (the Exchange Act), the term disclosure controls and procedures means controls and other procedures of an issuer that are designed to ensure that information required to be disclosed by the issuer in the reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported, within the time periods specified in the Commission's rules and forms. Disclosure controls and procedures include without limitation, controls and procedures designed to ensure that information required to be disclosed by an issuer in the reports that it files or submits under the Exchange Act is accumulated and communicated to the issuer's management, including the Certifying Officers, to allow timely decisions regarding required disclosures. Based on this evaluation, the Certifying Officers have concluded that the Company's disclosure controls and procedures were effective to ensure that material information is recorded, processed, summarized and reported by management of the Company on a timely basis in order to comply with the Company's disclosure obligations under the Exchange Act and the rules and regulations promulgated thereunder.

Further, there were no changes in the Company's internal control over financial reporting during the Company's third fiscal quarter that materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

PART II - OTHER INFORMATION

Item 6. Exhibits

(a) Exhibits

- 3.0 Articles of Incorporation^(a)
- 3.1 By-laws^(b)
- 10.40* Employment agreement between James E. Rouse and the Company dated October 5th, 2001, as amended.^(c)
- 10.41 Asset Purchase Agreement, dated May 7, 2004, between Micron Products, Inc. and Shrewsbury Molders, Inc.^(d)
- 31.1 Certification of the CEO pursuant to Rule 13a-14(a) or Rule 15(d)-14(a) on page X-1.
- 31.2 Certification of the CFO pursuant to Rule 13a-14(a) or Rule 15(d)-14(a) on page X-2.
- 32.1 Certification pursuant to 18 U.S.C. §1350 as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 on page X-3.
- 32.2 Certification pursuant to 18 U.S.C. §1350 as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 on page X-4.

* Indicates a management contract or compensatory plan required to be filed as an exhibit.

- (a) Incorporated by reference from the Company's Registration Statement on Form S-18 as filed with the Commission in April 1988, Registration Statement No. 33-20945-FW.
- (b) Incorporated by reference from the Company's Form 10-Q for period ended September 30, 2002 as filed with the Commission in November 2002.
- (c) Incorporated by reference from the Company's Form 10-Q as exhibit 10.10 for period ended September 30, 2002 as filed with the Commission in November 2002 and as amended, incorporated by reference from Exhibit 99.1 to the Company's Form 8-K filed on October 6, 2006.
- (d) Incorporated by reference from the Company's Form 8-K as filed with the Commission on May 21, 2004.

SIGNATURES

In accordance with the requirements of the Securities Exchange Act of 1934, the registrant caused this report to be signed on its behalf by the undersigned thereunto duly authorized.
