(1) Management believes that funds from operations is an important supplemental measure of operating performance for a real estate investment trust. Because the historical cost accounting convention used for real estate assets requires straight-line depreciation (except on land), such accounting presentation implies that the value of real estate assets diminishes predictably over time. Since real estate values instead have historically risen and fallen with market conditions, presentations of operating results for a real estate investment trust that use historical cost accounting for depreciation could be less informative, and should be supplemented with a measure such as FFO. The term FFO was designed by the real estate investment trust industry to address this issue. Our measure may not be comparable to similarly titled measures used by other REITs. Consequently, our funds from operations may not provide a meaningful measure of our performance as compared to that of other REITs. Since other REITs may not use our definition of FFO, caution should be exercised when comparing our

Edgar Filing: NATIONAL HEALTH INVESTORS INC - Form 8-K

Company's FFO to that of other REITs. Funds from operations in and of itself does not represent cash generated from operating activities in accordance with GAAP (funds from operations does not include changes in operating assets and liabilities) and therefore should not be considered an alternative to net earnings as an indication of operating performance, or to net cash flow from operating activities as determined by GAAP in the United States, as a measure of liquidity and is not necessarily indicative of cash available to fund cash needs.
