RADVISION(R) Releases New Version of ProLab(TM) Testing Suite with End-to-End IMS Terminal and Server Support

Tuesday September 11, 7:00 am ET

New Release Includes the ProLab IMS Testing Solution, Part of the IMS Express(TM) -- the Complete IMS Developer Suite

TEL AVIV, Israel--(BUSINESS WIRE)--RADVISION (Nasdaq: RVSN - News), a leading provider of video network infrastructure and developer tools for unified visual communications over IP, 3G, and emerging next-generation IMS networks, today announced the release of Version 5.0 of its ProLab Testing Suite, a comprehensive testing solution for voice and video over IP, IMS and 3G networks.

A pioneer in the area of media quality testing & analysis, RADVISION's ProLab Testing Suite is a leading force in the industry. The suite is deployed throughout the world at major device manufacturers, network equipment providers, testing labs and service providers. RADVISION's ProLab Testing Suite allows vendors and service providers to perform the rigorous testing and validation needed to ensure high quality, dependable product deployment. Based on RADVISION's award-winning protocol toolkits, know-how and technological expertise in IMS, multipoint video over IP, and across the board interoperability, this powerful testing tool complies with the industry's most recent standards.

This most recent version of the ProLab Testing Suite comes complete with an IMS testing solution with both IMS Terminals and IMS Servers. These include terminal emulation for High Definition generation and an IMS Server for simulating IMS Core Networks.

"The ProLab Testing Suite provides a complete testing solution for emerging IMS and IMS SIP products," said Eli Cohen, Product Manager with RADVISION's Technology Business Unit. "ProLab also performs media and protocol analysis, including packet distribution, packet loss, bandwidth, errors, and more."

The media analysis and quality tools support analysis of RTP traffic and standard-based voice and video quality. This includes support for analysis of expected call flow, including call details and full automation to minimize testing time and deliver faster time-to-market.

Edgar Filing: RADVISION LTD - Form 6-K

With the ProLab Testing Suite, automated full regression testing can be conducted for components prior to release. Entire network systems can be emulated and tested prior to deployment, and end user service problems can be evaluated. Advanced tests and analysis, includes analyzing packet or frame loss, delay, and jitter checking. In addition, the ProLab Testing Suite simulates different network topologies.

About RADVISION

RADVISION (Nasdaq: RVSN - News) is the industry's leading provider of market-proven products and technologies for unified visual communications over IP, 3G and IMS networks. With its complete set of standards-based video networking infrastructure and developer toolkits for voice, video, data and wireless communications, RADVISION is driving the unified communications evolution by combining the power of video, voice, data and wireless - for high definition video conferencing systems, innovative converged mobile services, and highly scalable video-enabled desktop platforms on IP, 3G and emerging next-generation IMS networks. RADVISION(R) to Host 2007 IMS and 3G Face-to-Face Interoperability Event

Wednesday September 12, 8:00 am ET

The IMTC Event Will Be Held In Tel Aviv on October 8-12 and Will Focus on IMS Client Interoperability and 3G MONA Call Setup Time Reduction Technique

TEL AVIV, Israel--(BUSINESS WIRE)--RADVISION (Nasdaq: RVSN - News), a leading provider of video network infrastructure and developer tools for unified visual communications over IP, 3G, and emerging next-generation IMS networks, today announced it will be hosting the IMTC (International Multimedia Telecommunications Consortium) Face-to-Face Interoperability Event for the second year in a row. This event will bring together the IMS and 3G-324M Activity Groups, who will meet to test the robustness and interoperability of IMS video sharing applications and 3G network issues, such as MONA implementations, H.264 and AMR-WB.

"This is the first time that IMS video share clients will be rigorously tested in a professional forum," said Tsahi Levent-Levi, Chairman of the IMTC IMS Activity Group and a Product Manager at RADVISION. "We are proud to be spearheading these efforts, which will help operators roll out new and exciting services. We are confident that what we accomplish during the event will contribute a great deal to the industry."

"The rapid adoption of both MONA (Media Oriented Negotiation Acceleration) and WNSRP (Windowed-Numbered Simple Retransmission Protocol) by both carriers and developers has advanced the 3G video communications industry significantly," said Oren Libis, Chairman of the IMTC 3G-324M Activity Group and a Project Manager at RADVISION. "RADVISION was first-to-market with this solution for reducing call setup time. MONA and WNSRP have done much to improve the customer experience." More detailed information on WNSRP, MONA, and call setup time can be found on RADVISION's website.

The IMTC Face-to-Face Interoperability event will be hosted at RADVISION Tel Aviv headquarters on October 8-12, 2007.
