Magal Receives a US\$20 Million Order for the Installation of a Municipal Surveillance Security Solution in a Large Latin American City

Wednesday September 3, 5:07 am ET

YAHUD, Israel, September 3 /PRNewswire-FirstCall/ -- Magal Security Systems, Ltd. (NASDAQ GMS: MAGS) (TASE: MAGS) announced today that its subsidiary Senstar-Stellar has received an order for the installation of a municipal surveillance security solution in a large city in Latin America, based on its FORTIS Command and Control System. The majority of the approximately US\$20 million project will be completed during 2008.

This FORTIS System to be installed in this large Latin American city will integrate hundreds of cameras, emergency call units, and intelligent video analysis based on Magal's DreamBox, all connected to one unified command and control center operated by several security personnel during each shift. The FORTIS System, via a cellular network, will enable the command and control center to monitor, control and dispatch security alerts to approximately 150 patrol cars and fast-response forces, some equipped with cameras for bi-directional video transfer.

The FORTIS System is based on an advanced technology that includes a unique graphic control center and real-time live video of the protected zones which are the subject of an alert. The system enables the operator to promptly receive and dispatch live video and alerts to and from security vehicles via wide range wireless, consequently optimizing the operational response.

The FORTIS System will help protect this city from crime and acts of terrorism and is expected to increase the sense of security of the residents of the city.

Mr. Izhar Dekel, CEO of Magal said, "This breakthrough order in this market segment follows another major installation of the FORTIS System in an Asian capital city, and evidences the strategic potential that it represents for our company for the future. The continuing international success of the FORTIS System is a direct outcome of our substantial investment in research and development, as well as marketing and sales over the past few years. Our municipal security solution provides a leading integrated system that meets the challenging security demands of municipalities around the world. We believe that this market has great untapped potential and we expect to receive orders for projects of this type from other cities in the future."
