RADVISION Continues Market Leading Enhancements to Desktop Platform as Adoption Accelerates

Monday October 20, 9:00 am ET

RADVISION Showcases SCOPIA Desktop with Improved High Definition Technology Delivering an End-to-End High Definition Video and Data Experience

PARIS & TEL AVIV, Israel--(BUSINESS WIRE)--RADVISION(R) Ltd. (Nasdaq: RVSN - News), a leading provider of video network infrastructure and developer tools for unified visual communications over IP, 3G, and emerging next-generation IMS networks, today announced that it will demonstrate its latest high definition (HD) desktop video conferencing advancements, including HD motion video and HD data sharing, on October 21st - 23rd at the IP Convergence Expo in Paris.

Building on the award-winning SCOPIA Desktop's HD 720p receive capabilities currently available, SCOPIA Desktop users will now be able to send HD business quality video from a PC with a standard consumer USB web camera. This will allow all conference participants on desktops or room systems to see desktop participants in full HD, significantly improving the conference experience especially in full screen mode. This capability is being demonstrated using a widely available and affordable Logitech(R) QuickCam(R) Pro 9000 USB camera with RADVISION's SCOPIA Desktop software on a standard PC delivering an exceptional value for a full HD desktop solution.

RADVISION is also furthering its lead in the desktop arena with the implementation of HD data sharing. Using H.264 HD codec technology for the H.239 data channel in SCOPIA Desktop, data sharing is now at HD crystal clarity. Data collaboration via the H.239 standard is a key component to effective meetings between room systems and desktop video conferencing. Now, with the addition of high definition support, it provides a true end-to-end HD experience for both video and data. It also delivers better bandwidth utilization resulting in improved image quality and lower delay even in low bandwidth environments.

SCOPIA Desktop extends room system based video conferencing deployments by allowing remote users to connect to conferences and fully participate in audio, video, and data collaboration as if they were in the same room. SCOPIA Desktop's unique market leading features include a freely distributable web client, automatic firewall traversal, voice-video-data interoperability and end-to-end high definition. SCOPIA Desktop can be used by anyone inside or outside the enterprise firewall making it easy to connect to and fully participate in meetings no matter where users are - at their desk, at a customer location, or in a hotel in another part of the world.

These unique capabilities continue to drive wide-scale market acceptance and

## Edgar Filing: RADVISION LTD - Form 6-K

adoption of SCOPIA Desktop, introduced in June 2007. Port licenses for SCOPIA Desktop, which is bundled with the SCOPIA platform, are free but must be requested by users. The number of port licenses for SCOPIA Desktop more than doubled in the first six months of 2008 compared with the last half of 2007. Now, with over 15,000 ports deployed, these shared ports are in use in enterprises, governments, educational institutions and other organizations worldwide supporting tens of thousands of users. RADVISION's continued investment in SCOPIA Desktop including these latest enhancements is improving the quality and experience of desktop conferencing and accelerating the extension of video conferencing to the desktop.

"As the market moves to high definition, users are expecting the same HD quality across any device they choose to participate with in the conference - not just for video, but also for presentations and other materials," said Boaz Raviv, CEO of RADVISION. "The high definition capabilities that SCOPIA Desktop now offers utilizing affordable off-the-shelf cameras and PCs are second to none in the market."

"In May of this year, we awarded RADVISION the 2008 North American Frost & Sullivan Award for Product Differentiation Innovation for the SCOPIA Conferencing Platform. This was in recognition of market leading support for standard and high definition video, advanced network management capabilities, but largely due to the integration of desktop conferencing," said Krithi Rao Industry Analyst - Unified Communications for Frost & Sullivan. "RADVISION continues to pace the market delivering what users want and their success in the market with SCOPIA Desktop shows it."

RADVISION will be exhibiting SCOPIA Desktop with this latest high definition (HD) capability and unified communications integration with IBM and Microsoft solutions at the IP Convergence Expo in Paris, October 21 - 23, Porte De Versailles, stand D12.

### About RADVISION

RADVISION (Nasdaq: RVSN - News) is the industry's leading provider of market-proven products and technologies for unified visual communications over IP, 3G and IMS networks. With its complete set of standards-based video networking infrastructure and developer toolkits for voice, video, data and wireless communications, RADVISION is driving the unified communications evolution by combining the power of video, voice, data and wireless - for high definition video conferencing systems, innovative converged mobile services, and highly scalable video-enabled desktop platforms on IP, 3G and emerging next-generation IMS networks.
