VANECK VECTORS MORNINGSTAR GLOBAL WIDE MOAT ETF

Ticker: GOAT™
 Principal U.S. Listing Exchange: NYSE Arca, Inc.
SUMMARY PROSPECTUS
 FEBRUARY 1, 2019

GOATSUM

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus and other information about the Fund online at <http://www.vaneck.com/library/etfs/>. You can also get this information at no cost by calling 800.826.2333, or by sending an email request to info@vaneck.com. The Fund's prospectus and statement of additional information, both dated February 1, 2019, as may be supplemented from time to time, are incorporated by reference into this summary prospectus.

INVESTMENT OBJECTIVE

VanEck Vectors Morningstar Global Wide Moat ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Morningstar® Global Wide Moat Focus IndexSM (the Global Wide Moat Focus Index).

FUND FEES AND EXPENSES

The following tables describe the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

| | |
|--|--------|
| Management Fee | 0.45% |
| Other Expenses ^(a) | 0.11% |
| Total Annual Fund Operating Expenses ^(b) | 0.56% |
| Fee Waivers and Expense Reimbursement ^(b) | -0.04% |
| Total Annual Fund Operating Expenses After | 0.52% |

Fee Waiver and Expense
Reimbursement^(b)

- (a) Other Expenses are based on estimated amounts for the current fiscal year.
- (b) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, trading expenses, taxes and extraordinary expenses) from exceeding 0.52% of the Fund's average daily net assets per year until at least February 1, 2020. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same (except that the example incorporates the fee waiver and/or expense reimbursement arrangement for only the first year). Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR EXPENSES

| | | |
|---|----|-----|
| 1 | \$ | 53 |
| 3 | \$ | 175 |

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. Because the Fund commenced operations on October 30, 2018, no portfolio turnover figures are available for the most recent fiscal year.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Global Wide Moat Focus Index is comprised of securities issued by companies that Morningstar, Inc. (Morningstar or the Index Provider) determines to have sustainable competitive advantages based on a proprietary methodology that considers quantitative and qualitative factors (wide moat companies). The quantitative factors used by Morningstar to identify competitive advantages currently include historical and projected returns on invested capital relative to cost of capital. The qualitative factors used by Morningstar to identify competitive advantages currently include customer switching cost (*i.e.*, the costs of customers switching to competitors), internal cost advantages, intangible assets (*e.g.*, intellectual property and brands), network effects (*i.e.*, whether products or services become more valuable as the number of customers grows) and efficient scale (*i.e.*, whether the company effectively serves a limited market that potential rivals have little incentive to enter into). Wide moat companies are selected by Morningstar from the universe of companies represented in the Morningstar® Global Markets IndexSM (the Parent Index) a broad market index representing 97% of developed and emerging market capitalization that meet certain trading frequency, dollar trading volume and turnover and free-float market-capitalization requirements. The Global Wide Moat Focus Index targets a select group of wide moat companies: those that according to Morningstar's equity research team are attractively priced as of each Global Wide Moat Focus Index review. Morningstar utilizes a momentum screen, in which momentum represents a security's 12-month price change. The momentum screen is used to exclude 20% of wide moat companies in the Parent Index with the worst 12-month momentum based on a 12-month price change of each company's securities. Out of the companies in the Parent Index that Morningstar determines are wide moat companies and display 12-month momentum in the top 80%, Morningstar selects companies to be included in the Global Wide Moat Focus Index as determined by the ratio of Morningstar's estimate of fair value of the issuer's common stock to the price. Morningstar's equity research fair value estimates are calculated using a standardized, proprietary valuation model that predominantly relies on a detailed projection of a company's future cash flows. Wide moat companies may include medium-capitalization companies. The Fund, under normal market conditions, will invest at least 40% of its assets in companies organized or located in multiple countries outside the United States or doing a substantial amount of business in multiple countries outside the United States. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

As of December 31, 2018, the Global Wide Moat Focus Index included 73 securities of companies with a market capitalization range of between approximately \$1.6 billion to \$785 billion and a weighted average market capitalization of \$117.7 billion. As of December 31, 2018, approximately 22.2% of the Global Wide Moat Focus Index consisted of securities of European issuers. These amounts are subject to change. The maximum weight of an individual country or sector in the Global Wide Moat Focus Index is capped at 10% more than its corresponding weight in the Parent Index at the time of reconstitution, or 40%, whichever is higher. The Global Wide Moat Focus Index is divided into two equally-weighted sub-portfolios, and each is reconstituted and rebalanced semi-annually on alternating quarters.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Global Wide Moat Focus Index by investing in a portfolio of securities that generally replicates the Global Wide

Moat Focus Index. Unlike many investment companies that try to beat the performance of a benchmark index, the Fund does not try to beat the Global Wide Moat Focus Index and does not seek temporary defensive positions when markets decline or appear overvalued. Indexing may eliminate the chance that the Fund will substantially outperform the Global Wide Moat Focus Index but also may reduce some of the risks of active management, such as poor security selection.

The Fund is classified as a non-diversified fund under the Investment Company Act of 1940, as amended (the 1940 Act) and, therefore, may invest a greater percentage of its assets in a particular issuer. The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Global Wide Moat Focus Index concentrates in an industry or group of industries. As of September 30, 2018, each of the communication services, financials, health care, industrials and information technology sectors represented a significant portion of the Global Wide Moat Focus Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or

any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility. Morningstar may be incorrect in its assessment of the competitive advantages of the companies selected for inclusion in the Global Wide Moat Focus Index, and the securities issued by such companies may underperform Morningstar's expectations and have an adverse effect on the Fund's overall performance. There can also be no assurance that wide or narrow moat companies will have sustainable competitive advantages for any period of time. Competitive advantages for wide and narrow moat companies may erode in a relatively short period of time due to, among other reasons, changes in laws and regulations, intellectual property rights, economic and political conditions and technological developments.

Risk of Investing in the Communication Services Sector. The Fund will be sensitive to, and its performance may depend to a greater extent on, the overall condition of the communication services sector. Companies in the communication services sector may be affected by industry competition, substantial capital requirements, government regulations and obsolescence of communications products and services due to technological advancement.

Risk of Investing in the Financials Sector. The Fund will be sensitive to, and its performance may depend to a greater extent on, the overall condition of the financials sector. Companies in the financials sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financials sector may be adversely affected by increases in interest rates, by loan losses, which usually increase in economic downturns, and by credit rating downgrades. In addition, the financials sector has undergone, and may continue to undergo, changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, some companies in the financials sector perceived as benefitting from government intervention in the past may be subject to future government-imposed restrictions on their businesses or face increased government involvement in their operations. Increased government involvement in the financials sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions.

Risk of Investing in the Health Care Sector. The Fund will be sensitive to, and its performance may depend to a greater extent on, the overall condition of the health care sector. Companies in the health care sector may be affected by extensive government regulation, restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure, an increased emphasis on outpatient services, limited number of products, industry innovation, changes in technologies and other market developments. Many health care companies are heavily dependent on patent protection and are subject to extensive litigation based on product liability and similar claims.

Risk of Investing in the Industrials Sector. The Fund will be sensitive to, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in the Information Technology Sector. The Fund will be sensitive to, and its performance may depend to a greater extent on, the overall condition of the information technology sector. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face product obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent protection and the expiration of patents may adversely affect the profitability of these companies.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. In addition, these companies often have greater price volatility, lower trading volume and less liquidity than larger, more established companies. Returns on investments in securities of medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because certain foreign securities markets may be limited in size, the activity of large traders may have an undue influence on the prices of securities that trade in such markets. The Fund invests in securities of issuers located in countries whose economies are heavily dependent upon trading with key partners. Any reduction in this trading may have an adverse impact on the Fund's investments. To the extent the Fund invests in emerging market countries, the risks of investing in such countries are greater than risks associated with investments in foreign developed countries.

Foreign Currency Risk. Because the Fund's assets may be invested in securities denominated in foreign currencies, the proceeds received by the Fund from its investments and/or the revenues received by the issuer will generally be in foreign currencies. The Fund's exposure to foreign currencies and changes in the value of foreign currencies versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and foreign currencies.

Special Risk Considerations of Investing in European Issuers. Investments in securities of European issuers involve risks and special considerations not typically associated with investment in the U.S. securities markets. The Economic and Monetary Union (EMU) of the European Union (EU) requires member countries to comply with restrictions on inflation rates, deficits, interest rates, debt levels and fiscal and monetary controls, each of which may significantly affect every country in Europe. Decreasing imports or exports, changes in governmental or EU regulations on trade, changes in the exchange rate of the euro, the default or threat of default by an EU member country on its sovereign debt, and/or an economic recession in an EU member country may have a significant adverse effect on the economies of EU member countries and on major trading partners outside Europe. The European financial markets have previously experienced, and may continue to experience, volatility and have been adversely affected by concerns about economic downturns, credit rating downgrades, rising government debt levels and possible default on or restructuring of government debt in several European countries. These events have adversely affected, and in the future may affect, the value and exchange rate of the euro and may continue to significantly affect the economies of every country in Europe, including EU member countries that do not use the euro and non-EU member countries. In addition, in a referendum held on June 23, 2016, voters in the United Kingdom (UK) voted to leave the EU, creating economic and political uncertainty in its wake. Significant uncertainty exists regarding the timing of the UK's withdrawal from the EU and the effects such withdrawal will have on the euro, European economies and global markets.

Risk of Investing in Depositary Receipts. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Global Wide Moat Focus Index, may negatively affect the Fund's ability to replicate the performance of the Global Wide Moat Focus Index.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Operational Risk. The Fund is exposed to operational risk arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or system failures.

High Portfolio Turnover Risk. The Fund may engage in active and frequent trading of its portfolio securities. High portfolio turnover may result in increased transaction costs to the Fund, including brokerage commissions, dealer mark-ups and other transaction costs on the sale of the securities and on reinvestment in other securities.

Index Tracking Risk. The Fund's return may not match the return of the Global Wide Moat Focus Index for a number of reasons. For example, the Fund incurs a number of operating expenses, including taxes, not applicable to the Global Wide Moat Focus Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Global Wide Moat Focus Index, which are not factored into the return of the Global Wide Moat Focus Index. Transaction costs, including brokerage costs, will decrease the Fund's net asset value (NAV) to the extent not offset by the transaction fee payable by an Authorized Participant (AP). Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the required levels in order to track the Global Wide Moat Focus Index. Errors in the Global Wide Moat Focus Index data, the Global Wide Moat Focus Index computations and/or the construction of the Global Wide Moat Focus Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the Fund and its shareholders. In addition, the Fund may not invest in certain

securities included in the Global Wide Moat Focus Index, or invest in them in the exact proportions in which they are represented in the Global Wide Moat Focus Index. The Fund's performance may also deviate from the return of the Global Wide Moat Focus Index due to legal restrictions or limitations imposed by the governments of certain countries, certain listing standards of the Fund's listing exchange (the Exchange), a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons (such as diversification requirements). The Fund may value certain of its investments and/or other assets based on fair value prices. To the extent the Fund calculates its NAV based on fair value prices and the value of the Global Wide Moat Focus Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Global Wide Moat Focus Index is not based on fair value prices), the Fund's ability to track the Global Wide Moat Focus Index may be adversely affected. In addition, any issues the Fund encounters with regard to currency convertibility (including the cost of borrowing funds, if any) and repatriation may also increase the index tracking risk. For tax efficiency purposes, the Fund may sell certain securities, and such sale may cause the Fund to realize a loss and deviate from the performance of the Global Wide Moat Focus Index. In light of the factors discussed above, the Fund's return may deviate significantly from the return of the Global Wide Moat Focus Index. Changes to the composition of the Global Wide Moat Focus Index in connection with a rebalancing or reconstitution of the Global Wide Moat Focus Index may cause the Fund to experience increased volatility, during which time the Fund's index tracking risk may be heightened.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as APs, none of which are obligated to engage in creation and/or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, there may be a significantly diminished trading market for Shares or Shares may trade like closed-end funds at a discount (or premium) to NAV and possibly face trading halts and/or de-listing. The AP concentration risk may be heightened in scenarios where APs have limited or diminished access to the capital required to post collateral.

No Guarantee of Active Trading Market. While Shares are listed on the Exchange, there can be no assurance that an active trading market for the Shares will be maintained. Further, secondary markets may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods in times of market stress because market makers and APs may step away from making a market in the Shares and in executing creation and redemption orders, which could cause a material deviation in the Fund's market price from its NAV.

Trading Issues. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange's circuit breaker rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Passive Management Risk. An investment in the Fund involves risks similar to those of investing in any fund invested in equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Global Wide Moat Focus Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Fund Shares Trading, Premium/Discount Risk and Liquidity of Fund Shares. The market price of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares

(including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may pay significantly more or receive significantly less than the underlying value of the Shares that were bought or sold or the shareholder may be unable to sell his or her Shares. The securities held by the Fund may be traded in markets that close at a different time than the Exchange. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when the Exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on the Exchange and the resulting premium or discount to the Shares' NAV may widen. Additionally, in stressed market conditions, the market for the Fund's Shares may become less liquid in response to deteriorating liquidity in the markets for the Fund's underlying portfolio holdings. There are various methods by which investors can purchase and sell Shares. Investors should consult their financial intermediaries before purchasing or selling Shares of the Fund.

Non-Diversified Risk. The Fund is classified as a non-diversified fund under the 1940 Act. Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a

single issuer. Moreover, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Global Wide Moat Focus Index concentrates in a particular sector or sectors or industry or group of industries. To the extent that the Fund is concentrated in a particular sector or sectors or industry or group of industries, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on those sectors and/or industry or groups of industries will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The Fund commenced operations on October 30, 2018 and therefore does not have a performance history for the calendar year ended December 31, 2018. Once available, the Fund's performance information will be accessible on the Fund's website at www.vaneck.com.

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

| Name | Title with Adviser | Date Began Managing the Fund |
|------|--------------------|------------------------------|
|------|--------------------|------------------------------|

| | | |
|---------------|-------------------|--------------|
| Peter H. Liao | Portfolio Manager | October 2018 |
|---------------|-------------------|--------------|

| | | |
|---------------------|-------------------|--------------|
| Guo Hua (Jason) Jin | Portfolio Manager | October 2018 |
|---------------------|-------------------|--------------|

PURCHASE AND SALE OF FUND SHARES

The Fund issues and redeems Shares at NAV only in a large specified number of Shares, each called a Creation Unit, or multiples thereof. A Creation Unit consists of 50,000 Shares.

Individual Shares of the Fund may only be purchased and sold in secondary market transactions through brokers. Shares of the Fund are listed on the Exchange and because Shares trade at market prices rather than NAV, Shares of the Fund may trade at a price greater than NAV (*i.e.*, a premium) or less than NAV (*i.e.*, a discount).

TAX INFORMATION

The Fund's distributions are taxable and will generally be taxed as ordinary income or capital gains.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Adviser and its related companies may pay broker-dealers or other financial intermediaries (such as a bank) for the sale of the Fund Shares and related services. These payments may create a conflict of interest by influencing your broker-dealer or other intermediary or its employees or associated persons to recommend the Fund over another investment. Ask your financial adviser or visit your financial intermediary's website for more information.
