Table of Contents**LSI LOGIC CORPORATION****NOTES TO UNAUDITED CONSOLIDATED CONDENSED FINANCIAL STATEMENTS****NOTE 1 BASIS OF PRESENTATION**

In the opinion of LSI Logic Corporation (the Company or LSI), the accompanying unaudited consolidated condensed financial statements contain all adjustments (consisting only of normal recurring adjustments and restructuring and other items, net as discussed in Note 3 to the Unaudited Consolidated Condensed Financial Statements, hereafter referred to as the Notes), necessary to state fairly the financial information included herein. While the Company believes that the disclosures are adequate to make the information not misleading, it is suggested that these financial statements be read in conjunction with the audited consolidated financial statements and accompanying notes included in the Company's Annual Report on Form 10-K for the year ended December 31, 2005.

For financial reporting purposes, the Company reports on a 13 or 14-week quarter with a year ending December 31. The current quarter ended July 2, 2006. The results of operations for the quarter ended July 2, 2006 are not necessarily indicative of the results to be expected for the full year. The first six months of 2006 ended on July 2, 2006 and the first six months of 2005 ended on July 3, 2005 and consisted of approximately 26 weeks each. The three months of the Company's second quarter ended July 2, 2006 and July 3, 2005 each consisted of 13 weeks.

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated condensed financial statements and the reported amounts of revenues and expenses during the reporting periods. Actual results could differ significantly from these estimates.

Recent Accounting Pronouncements

In June 2006, the Financial Accounting Standards Board (FASB) issued FASB interpretation No. 48 (FIN No. 48) Accounting for Uncertainty in Income Taxes-an interpretation of FASB Statement No. 109 (FAS No. 109). This interpretation prescribes a recognition threshold and measurement attribute for tax positions taken or expected to be taken in a tax return. This interpretation also provides guidance on de-recognition, classification, interest and penalties, accounting in interim periods, disclosure and transition. The evaluation of a tax position in accordance with this interpretation is a two-step process. In the first step, recognition, the Company determines whether it is more-likely-than-not that a tax position will be sustained upon examination, including resolution of any related appeals or litigation processes, based on the technical merits of the position. The second step addresses measurement of a tax position that meets the more-likely-than-not criteria. The tax position is measured at the largest amount of benefit that is greater than 50 percent likely of being realized upon ultimate settlement. Differences between tax positions taken in a tax return and amounts recognized in the financial statements will generally result in a) an increase in a liability for income taxes payable or a reduction of an income tax refund receivable, b) a reduction in a deferred tax asset or an increase in a deferred tax liability or c) both a and b. Tax positions that previously failed to meet the more-likely-than-not recognition threshold should be recognized in the first subsequent financial reporting period in which that threshold is met. Previously recognized tax positions that no longer meet the more-likely-than-not recognition threshold should be de-recognized in the first subsequent financial reporting period in which that threshold is no longer met. Use of a valuation allowance as described in FAS No. 109 is not an appropriate substitute for the de-recognition of a tax position. The requirement to assess the need for a valuation allowance for deferred tax assets based on sufficiency of future taxable income is unchanged by this interpretation. This interpretation is effective for the Company on January 1, 2007. The Company is currently evaluating the impact FIN No. 48 will have to the Company's consolidated balance sheet and statement of operations.

In June 2006, the FASB Emerging Issues Task Force (EITF) issued EITF Issue No. 06-2 (EITF 06-02), Accounting for Sabbatical Leave and Other Similar Benefits Pursuant to FASB Statement No. 43 (FAS No. 43), Accounting for Compensated Absences. EITF 06-02 addresses the accounting for an employee's right to a compensated absence under a sabbatical or other similar benefit arrangement that is unrestricted (that is, the employee is not required to perform any services for or on behalf of the entity during the absence) and that requires the completion of a minimum service period and in which the benefit does not increase with additional years of service. For sabbatical arrangements meeting this criteria, EITF 06-02 concludes that the accumulates criteria has been met in paragraph 6(b) of FAS

No. 43 and that as long as the remaining sections of paragraph 6 are met, the sabbatical arrangement should be accrued over the requisite service period, which for the Company would be 10 years. EITF 06-02 is effective for the Company on January 1, 2007 and is required to be recognized as a cumulative effect of a change in accounting principle that would need to be retroactively reflected in all prior period financial statements presented. The Company offers sabbatical of 20 days

Table of Contents

to full-time employees upon completion of 10 years of service. The Company is currently evaluating the impact EITF 06-02 will have to the Company's consolidated balance sheet and statement of operations.

NOTE 2 STOCK-BASED COMPENSATION

On January 1, 2006, the Company adopted the fair value recognition provisions of Statement of Financial Accounting Standards No. 123(R), Share-Based Payments (SFAS 123R), using the modified prospective transition method. In accordance with the modified prospective transition method, the Company began recognizing compensation expense for all share-based awards granted after January 1, 2006, plus unvested awards granted prior to January 1, 2006. Under this method of implementation, no restatement of prior periods has been made. The cumulative effect of adopting SFAS 123R was not significant.

Description of the Company's equity compensation plans:

The 2003 Equity Incentive Plan (the 2003 Plan): The 2003 Plan was approved by stockholders in May 2003. Under the 2003 Plan, the Company may grant stock options or restricted stock units to employees, officers and consultants. Stock options will have an exercise price that is no less than the fair market value of the stock on the date of grant. The term of each option or restricted stock unit is determined by the Board of Directors or its committee and for option grants on or after February 12, 2004, will generally be seven years. Options generally vest in annual increments of 25% per year commencing one year from the date of grant. Restricted stock units may be granted with the vesting requirements determined by the Board of Directors.

The 1991 Equity Incentive Plan (the 1991 Plan): Under the 1991 Plan, the Company may grant stock options to employees, officers and consultants, with an exercise price that is no less than the fair market value of the stock on the date of grant. The term of each option is determined by the Board of Directors or its committee and has generally been ten years. For options granted on or after February 12, 2004, the term of the options will generally be seven years. Options generally vest in annual increments of 25% per year commencing one year from the date of grant. With respect to shares previously approved by stockholders, no incentive stock options may be granted under this plan after March 2001.

The 1995 Director Option Plan: Under the 1995 Director Option Plan, new directors receive an initial grant of 30,000 options to purchase shares of common stock and directors receive subsequent automatic grants of 30,000 options to purchase shares of common stock each year thereafter. The initial grants vest in annual increments of 25% per year, commencing one year from the date of grant. Subsequent option grants become exercisable in full six months after the grant date. The term of each option is ten years. The exercise price of the options granted is equal to the fair market value of the stock on the date of grant.

The 1999 Nonstatutory Stock Option Plan (the 1999 Plan): Under the 1999 Plan, the Company may grant nonstatutory stock options to its employees, excluding officers, with an exercise price that is no less than the fair market value of the stock on the date of grant. The term of each option is determined by the Board of Directors or its committee and has generally been ten years. For options granted on or after February 12, 2004, the term of the options will be seven years. Options generally vest in annual increments of 25% per year commencing one year from the date of grant.

The Employee Stock Purchase Plan, amended and restated (US ESPP): Under the US ESPP, rights are granted to LSI Logic employees in the United States to purchase shares of common stock at 85% of the lesser of the fair market value of such shares at the beginning of a 12-month offering period or the end of each six-month purchase period within such an offering period. There are 18,187,817 shares remaining available for future issuance under this plan. The US ESPP includes an annual replenishment calculated at 1.2% of the Company's common stock issued and outstanding at the fiscal year end less the number of shares available for future grants under the US ESPP. No shares have been added to the US ESPP from the annual replenishment since January 2001.

International Employee Stock Purchase Plan (IESPP): Under the IESPP, rights are granted to LSI Logic employees (excluding executive officers) outside of the United States to purchase shares of common stock at 85% of the lesser of the fair market value of such shares at the beginning of a 12-month offering period or the end of each six-month purchase period within such an offering period. There are 1,944,748 shares remaining available for future issuance under this plan.

Stock-based compensation expense under SFAS 123R:

Stock-based compensation expense under SFAS 123R in the consolidated condensed statements of operations for the three and six months ended July 2, 2006 was \$13.3 million and \$25.1 million, respectively, as shown in the table below. Stock-based compensation costs capitalized to inventory and software for the three and six months ended July 2, 2006 were not significant.

Table of Contents

The estimated fair value of the Company's stock-based awards, less expected forfeitures, is amortized over the awards' vesting period (the requisite service period), on a straight-line basis. The table below summarizes stock-based compensation expense, related to employee stock options, the stock purchase plans and restricted stock units under SFAS 123R for the three and six months ended July 2, 2006.

Prior to January 1, 2006, the Company accounted for stock-based compensation awards using the intrinsic value method under APB 25, Accounting for Stock Issued to Employees, and related interpretations and followed the disclosure-only provisions of Statement of Financial Accounting Standards No. 123, Accounting for Stock-Based Compensation (SFAS 123), as amended. Such disclosure-only provisions are also referred to herein as pro forma financial information. Under APB 25 and related interpretations, compensation costs for stock options, if any, was measured as the excess of the quoted market price on the date of grant over the exercise price and recognized over the vesting period on a straight-line basis. The Company's policy is to grant options with an exercise price no less than the quoted closing market price of the Company's stock on the date of grant. For a complete discussion of stock-based compensation prior to January 1, 2006, please refer to the Company's Annual Report on Form 10-K for the year ended December 31, 2005.

	Three months ended		Six months ended	
	July 2, 2006	July 3, 2005	July 2, 2006	July 3, 2005
Stock-based compensation expense:				
	(In thousands)		(In thousands)	
Cost of revenues	\$ 2,458	\$ 164	\$ 3,983	\$ 325
Research and development	4,643	570	9,165	1,405
Selling, general and administrative	6,197	438	11,981	897
Total stock-based compensation expense	\$ 13,298	\$ 1,172	\$ 25,129	\$ 2,627

Table of Contents*Stock Options*

The fair value of each option grant is estimated on the date of grant using a reduced form calibrated binomial lattice model (the Lattice Model). This model requires the use of historical data for employee exercise behavior and the use of assumptions outlined in the following table:

	Three months ended July 2, 2006	Six months ended July 2, 2006
Employee Stock Options Granted		
Weighted average estimated grant date fair value	\$ 3.95	\$ 3.59
Weighted average assumptions in calculation:		
Expected life (years)	4.35	4.29
Risk-free interest rate	5%	5%
Volatility	48%	48%
Dividend yield		

The expected life of employee stock options represents the weighted-average period the stock options are expected to remain outstanding and is a derived output of the Lattice Model. The expected life of employee stock options is impacted by all of the underlying assumptions and calibration of the Company's model.

The Company used an equally weighted combination of historical and implied volatilities as of the grant date. The historical volatility is the standard deviation of the daily stock returns for LSI from the date of the Company's initial public offering in 1983. The Company used implied volatilities of near-the-money LSI traded call options as stock options are call options that are granted at the money. The historical and implied volatilities were annualized and equally weighted to determine the volatilities as of the grant date. Prior to January 1, 2006, the Company used historical implied stock price volatilities in accordance with SFAS 123 for purposes of its pro forma information. Company management believes that the equally weighted combination of historical and implied volatilities is more representative of future stock price trends than sole use of historical implied volatilities.

The risk-free interest rate assumption is based upon observed interest rates of constant maturity treasuries appropriate for the term of the Company's employee stock options.

The Lattice Model assumes that employees' exercise behavior is a function of the option's remaining vested life and the extent to which the option is in-the-money. The Lattice Model estimates the probability of exercise as a function of these two variables based on the entire history of exercises and cancellations on all past option grants made by the Company since the initial public offering in 1983.

As stock-based compensation expense recognized in the consolidated condensed statement of operations for the three and six months ended July 2, 2006 is based on awards ultimately expected to vest, it has been reduced for estimated forfeitures. SFAS 123R requires forfeitures to be estimated at the time of grant and revised, if necessary, in subsequent periods if actual forfeitures differ from those estimates. Forfeitures were estimated based on historical experience. For the Company's pro forma information required under SFAS 123 for the periods prior to January 1, 2006, the Company accounted for forfeitures as they occurred.

Table of Contents

A summary of the changes in stock options outstanding under the Company's equity-based compensation plans during the six months ended July 2, 2006 is presented below (share amounts in thousands):

	Number of Shares (In thousands)	2006 Weighted Average Exercise Price Per Share	Weighted Average Remaining Contractual Term	Average Intrinsic Value (In thousands)
Options outstanding at January 1,	70,618	\$ 13.21		\$
Options granted	3,759	10.10		
Options exercised	(2,844)	(6.88)		
Options canceled	(6,412)	(17.58)		
Options outstanding at July 2,	65,121	\$ 12.87	4.93	\$64,537
Options exercisable at July 2,	42,825	\$ 15.46	4.29	\$32,632

During the second quarter of 2005, Abhijit Y. Talwalkar, President and Chief Executive Officer was granted non-statutory stock options to purchase 2,000,000 shares of Company common stock under the 2003 Equity Incentive Plan at an exercise price equal to the closing price per share on the New York Stock Exchange (NYSE) for the common stock of the Company on the date of grant. The shares subject to such option will vest based on Mr. Talwalkar attaining certain performance criteria determined by the Compensation Committee of the Board of Directors. The shares subject to such option are scheduled to fully vest six years after the date of grant, whether or not the performance goals are met, and subject to Mr. Talwalkar's continued employment with the Company on each scheduled vesting date.

As of July 2, 2006, total unrecognized compensation expense related to nonvested stock options, net of estimated forfeitures, was approximately \$75.9 million and is expected to be recognized over the next 2.7 years on a weighted average basis. The total intrinsic value of options exercised during the three and six months ended July 2, 2006 was \$4.2 million and \$9.6 million, respectively. Cash received from stock option exercises was \$7.6 million and \$19.6 million during the three and six months ended July 2, 2006, respectively.

The Company's determination of fair value of share-based payment awards on the date of grant using an option-pricing model is affected by the Company's stock price as well as assumptions regarding a number of highly complex and subjective assumptions. The Company uses third-party consultants to assist in developing the assumptions used in as well as calibrating the Lattice Model. The Company is responsible for determining the assumptions used in estimating the fair value of its share based payment awards.

Employee Stock Purchase Plans

The Company also has two employee stock purchase plans (ESPPs US ESPP and IESPP) under which rights are granted to all employees to purchase shares of common stock at 85% of the lesser of the fair market value of such shares at the beginning of a 12-month offering period or the end of each six-month purchase period within such an offering period, typically in May and November. Compensation expense is calculated using the fair value of the employees' purchase rights under the Black-Scholes model. A total of 1.9 million shares related to the ESPPs were issued during the three months ended July 2, 2006. There were approximately 20.1 million shares of common stock reserved for issuance under the ESPPs as of July 2, 2006. The stock-based compensation expense for the three months ended July 2, 2006 stemming from the May 14, 2006 ESPP grants was not significant because the majority of employees of the Company enrolled in the 12-month purchase period in November of 2005 and will not re-enroll until November of 2006. For disclosure purposes, we have included the assumptions that went into the calculation of fair

value for May 2006 grant as follows:

	Three months ended July 2, 2006
Employee Stock Purchase Plans Granted	
Weighted average estimated grant date fair value	\$ 3.05
Weighted average assumptions in calculation:	
Expected life (years)	0.8
Risk-free interest rate	5%
Volatility	39%
Dividend yield	

Table of Contents*Restricted Stock Awards*

Under the 2003 Equity Incentive Plan (2003 Plan), the Company may grant restricted stock awards. No participant may be granted more than 0.5 million shares of restricted stock in any year. The vesting requirements for the restricted stock awards are determined by the Board of Directors. Typically, vesting of restricted stock awards is subject to the employee's continuing service to the Company. The cost of these awards is subject to the employee's continuing service to the Company. The cost of these awards is determined using the fair value of the Company's common stock on the date of grant and compensation expense is recognized over the vesting period on a straight-line basis.

A summary of the changes in restricted stock awards outstanding during the six months ended July 2, 2006 is presented below:

	2006 Number of Shares (In thousands)
Non-vested shares at January 1,	2,375
Granted	392
Vested	(762)
Forfeited	(101)
Non-vested shares at July 2,	1,904

As of July 2, 2006, the Company had approximately \$10.9 million of total unrecognized compensation expense, net of estimated forfeitures, related to restricted stock awards, which will be recognized over the weighted average period of 2.3 years. The fair value of shares vested during the three and six months ended July 2, 2006 was \$2.3 million and \$6.8 million, respectively.

There are a total of approximately 121 million shares of common stock reserved for issuance upon exercise of options and vesting of restricted stock awards, including options available for future grants, outstanding under all stock option plans.

Income taxes

In November 2005, the FASB issued FASB Staff Position No. FAS 123R-3 Transition Election Related to Accounting for Tax Effects of Share-Based Payment Awards. The Company has one year from the date of adoption to elect the transition method. Until such election is made, the Long-Form transition method must be used. In addition, in accordance with SFAS 123R, SFAS No. 109 Accounting for Income Taxes (SFAS 109), and EITF Topic D-32,

Intraperiod Tax Allocation of the Effect of Pretax Income from Continuing Operations, the Company has elected to recognize excess income tax benefits from stock option exercises in additional paid in capital only if an incremental income tax benefit would be realized after considering all other tax attributes presently available to the Company.

The Company records its stock based compensation expense in multiple jurisdictions. In jurisdictions where an income tax deduction is allowed and an income tax benefit is realizable, the Company has recognized an income tax benefit. In jurisdictions where an income tax deduction is not allowed or where an income tax benefit is not realizable, an income tax benefit has not been recognized.

Earnings per share

Basic net income per share is computed using the weighted-average number of common shares outstanding during the period. Diluted net income per share is computed using the weighted-average number of common shares outstanding and dilutive potential common shares outstanding during the period. Dilutive potential common shares consist of employee stock options and restricted common stock. Under the treasury stock method, the amount the employee must pay for exercising stock options, employee stock purchase rights, and the amount of compensation cost for future service that the Company has not yet recognized, and the amount of tax benefits that would be recorded in additional paid-in capital when the award becomes deductible are assumed to be used to repurchase the shares.

Table of Contents**Pro Forma Information under SFAS 123 for Period Prior to January 1, 2006 :**

Prior to January 1, 2006, the Company followed the disclosure-only provisions of SFAS 123. The following table provides pro forma disclosures as if the Company had recorded compensation costs based on the estimated grant date fair value, as defined by the SFAS 123, for awards granted under its stock-based compensation plans. In such case, the Company's net income per share would have been adjusted to the pro forma amounts below.

	Three months ended July 3, 2005 (In thousands, except per share amounts)	Six months ended July 3, 2005
Net income, as reported	\$ 25,262	\$ 29,981
Add: Amortization of non-cash deferred stock compensation determined under the intrinsic value method as reported in net income, net of related tax effects*		296
Deduct: Total stock-based employee compensation expense determined under fair value method for all awards, net of related tax effects*	(25,475)	(43,514)
Pro forma net loss	\$ (213)	\$(13,237)
Income/(loss) per share:		
Basic-as reported	\$ 0.06	\$ 0.08
Basic-pro forma	\$	\$ (0.03)
Diluted-as reported	\$ 0.06	\$ 0.08
Diluted-pro forma	\$	\$ (0.03)

* This amount excludes amortization of stock-based compensation on restricted stock awards.

The stock-based compensation expense determined under the fair value method, included in the table above, was calculated using the Black-Scholes model. The Black-Scholes model was developed to estimate the fair value of freely tradable, fully transferable options without vesting restrictions, which significantly differ from the Company's stock option awards. This model also requires highly subjective assumptions, including future stock price volatility and expected time until exercise, which greatly affect the calculated grant date fair value. The following weighted average assumptions were used in determining the estimated grant date fair values:

	Three months ended July 3, 2005	Six months ended July 3, 2005
Employee Stock Options Granted		
Weighted average estimated grant date fair value	\$ 4.25	\$ 4.14
Assumptions in calculation:		
Expected life (years)	4.59	4.54
Risk-free interest rate	4%	4%
Volatility	79%	79%

Dividend yield

	Three months ended July 3, 2005
Employee Stock Purchase Plan Right to Purchase Stock	
Weighted average estimated grant date fair value	\$ 2.65
Assumptions in calculation:	
Expected life (years)	0.75
Risk-free interest rate	3%
Volatility	84%
Dividend yield	

12

Table of Contents**NOTE 3 RESTRUCTURING AND OTHER ITEMS**

The Company recorded a net credit of \$21.6 million and a net credit of \$16.0 million in restructuring of operations and other items for the three and six months ended July 2, 2006, respectively. Of these credits, \$21.9 million and \$17.3 million was recorded in the Semiconductor segment and a charge of \$0.3 million and a charge of \$1.3 million was recorded in the Storage Systems segment for the three and six months ended July 2, 2006, respectively. The Company recorded charges of \$7.2 million and \$8.7 million in restructuring of operations and other items for the three and six months ended July 3, 2005, respectively, primarily in the Semiconductor segment. For a complete discussion of the 2005 restructuring actions, please refer to the Company's Annual Report on Form 10-K for the year ended December 31, 2005.

Restructuring and impairment of long-lived assets:

First quarter of 2006:

The \$5.7 million charge in the first quarter of 2006 is related to the net effect of the following items. An expense of \$2.7 million was recorded for changes in sublease assumptions for certain previously accrued facility lease termination costs. An expense of \$0.5 million was recorded to reflect the change-in-time value of accruals for facility lease termination costs. An expense of \$5.7 million was recorded for severance and termination benefits for employees primarily related to the broad-based reorganization that was announced in August 2005. Other exit costs of \$1.4 million include contract termination costs of \$0.9 million related to the Company's strategic realignment of the sales function and an expense of \$0.5 million for facility closure costs related to the Colorado fabrication facility as the expenses were incurred. Net gains of \$4.6 million were recorded to reflect a) the increase in fair value for our Colorado Springs facility that was sold to a third party subsequent to the first quarter of 2006, b) a gain for the sale of certain intellectual property to a third-party during the first quarter of 2006 that was written down to zero due to impairment in a previous year and c) the write-down of certain equipment held for sale to fair market value.

Second quarter of 2006:

The \$21.6 million credit is related to the net effect of the following items:

\$12.5 million net gain recorded for the sale of Gresham, Oregon manufacturing facility and certain related manufacturing process intellectual property to ON Semiconductor;

\$15.0 million gain recorded for the sale of certain intellectual property to a third-party based on the sale of zero basis intellectual property for \$15.0 million in cash proceeds;

\$7.4 million gain recorded for the sale of the Company's ZSP digital signal processor intellectual technology;

\$8.6 million charge recorded for severance and termination benefits for employees primarily related to the broad-based reorganization that was announced in August 2005;

\$3.3 million charge recorded for the write-off of certain intangible assets acquired in a purchase business combination; and

\$1.4 million net charge recorded primarily for changes in sublease assumptions for certain previously accrued facility lease termination costs.

Sale of the Gresham facility:

In May 2006, we completed the sale of our Gresham, Oregon manufacturing facility to ON Semiconductor for approximately \$105.0 million in cash, \$15.0 million of which was included in other current assets as of July 2, 2006, because the cash will be received in the third quarter of 2006. Under the terms of the agreement, ON Semiconductor offered employment to substantially all of the LSI manufacturing employees based at the Gresham site, with the remaining non-manufacturing workforce expected to continue their employment with LSI. ON Semiconductor also entered into additional agreements with LSI, including a multi-year wafer supply and test agreement, intellectual property license agreement, transition services agreement and a facilities use agreement. The wafer supply agreement includes a minimum purchase commitment whereby LSI has agreed to purchase \$198.8 million in wafers from ON

Semiconductor from the date of the sale of the Gresham facility in May of 2006 through the second quarter of 2008.

Assets held for sale of \$20.2 million and \$105.8 million were included as a component of prepaid expenses and other current assets as of July 2, 2006 and December 31, 2005, respectively. During the three months ended July 2, 2006, we sold the Gresham, Oregon manufacturing facility and two Colorado facilities. The gain from the Gresham facility is described above. The net loss from the sale of the two Colorado facilities was insignificant. Assets classified as held for sale are not depreciated. The fair values of impaired equipment and facilities were thoroughly researched and estimated by management using the assistance of third party

Table of Contents

appraisers. Given that current market conditions for the sale of older fabrication facilities and related equipment may fluctuate, there can be no assurance that the Company will realize the current net carrying value of the assets held for sale. The Company reassesses the realizability of the carrying value of these assets at the end of each quarter until the assets are sold or otherwise disposed of and additional adjustments may be necessary.

The following table sets forth the Company's restructuring reserves as of July 2, 2006, which are included in other accrued liabilities on the balance sheet:

	Balance at Restructuring			Balance at Restructuring		Utilized	Balance at
	December 31, 2005	Expense Q1, 2006	Utilized during Q1, 2006	April 2, 2006	Expense Q2, 2006	during Q2, 2006	July 2, 2006
(In thousands)							
Write-down of excess assets and decommissioning costs (a)	\$ 4,993	\$	\$ (48)	\$ 4,945	\$	\$ (4,565)	\$ 380
Lease terminations (b)	22,287	3,144	(2,220)	23,211	1,627	(1,684)	23,154
Facility closure and other exit costs (c)		1,368	(463)	905	20	(612)	313
Payments to employees for severance (d)	5,395	5,693	(1,743)	9,345	8,552	(3,295)	14,602
Total	\$32,675	\$ 10,205	\$ (4,474)	\$38,406	\$ 10,199	\$ (10,156)	\$38,449

(a) The \$0.4 million balance as of July 2, 2006, relates to estimates for selling costs for the remaining assets held for sale and is expected to be utilized during 2006.

(b) Amounts utilized represent cash payments. The balance remaining for real estate lease terminations will be paid during the

remaining terms of these contracts, which extend through 2011.

- (c) Amounts utilized represent cash payments. The balance remaining for facility closure and other exit costs will be paid during 2006.
- (d) Amounts utilized represent a) cash severance payments to 49 employees during the six months ended July 2, 2006 and b) cash payments for one-time termination benefits for 494 employees associated with the sale of the Gresham manufacturing facility. The majority of the balance remaining for severance and other termination benefits is expected to be paid in the third quarter of 2006.

Non-marketable equity securities	9,976	7,070
 Total long-term investments in equity securities	 \$ 19,781	 \$ 25,839

Table of Contents

Accumulated other comprehensive income included unrealized losses/(gains) on investments in available-for-sale debt and equity securities of \$4.3 million, net of the related tax effect of \$2.3 million, and \$(4.4) million, net of the related tax effect of \$(2.4) million, as of July 2, 2006, and December 31, 2005, respectively.

Net realized losses on sales of investments in available-for-sale debt securities were \$0.4 million and \$1.0 million for the three and six months ended July 2, 2006, respectively. Net realized losses on sales of investments in available-for-sale debt securities were \$0.4 million and \$0.7 million for the three and six months ended July 3, 2005, respectively.

The Company realized a pre-tax gain of \$1.2 million for certain marketable available-for-sale equity securities in the following for the six months ended July 2, 2006:

A \$1.4 million pre-tax gain related to the sale of certain marketable available-for-sale equity securities for the three months ended April 2, 2006; and

A \$0.2 million pre-tax loss related to the sale of certain marketable available-for-sale equity securities of a certain technology company that was acquired by another technology company for the three months ended July 2, 2006.

The Company realized pre-tax gains of \$2.4 million related to the following for the six months ended July 3, 2005:

A \$1.0 million pre-tax gain related to the sale of certain marketable available-for-sale equity securities for the three months ended July 3, 2005; and

A \$1.4 million pre-tax gain associated with marketable available-for-sale equity securities of a certain technology company that was acquired by another technology company for the three months ended July 3, 2005.

In November 2005, FASB issued FSP FAS 115-1/FAS 124-1, *The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments* (FSP 115-1/124-1). FSP 115-1/124-1 provides guidance on determining when investments in certain debt and equity securities are considered impaired, whether that impairment is other-than-temporary, and on measuring such impairment loss. FSP 115-1/124-1 also includes accounting considerations subsequent to the recognition of an other-than-temporary impairment and requires certain disclosures about unrealized losses that have not been recognized as other-than-temporary impairments. FSP 115-1/124-1 is required to be applied to reporting periods beginning after December 15, 2005. FSP 115-1/124-1 did not have a material impact on the Company's consolidated balance sheet or statement of operations.

NOTE 5 BALANCE SHEET DETAIL

	July 2, 2006	December 31, 2005
	(In thousands)	
Cash and cash equivalents:		
Cash in financial institutions	\$ 41,216	\$ 85,641
Cash equivalents	318,238	179,008
	\$359,454	\$264,649
Inventories:

Work-in-process	46,468	62,167
Finished goods	99,432	102,106
	\$173,753	\$194,814

In November 2004, the FASB issued SFAS No. 151, *Inventory Costs* an amendment of ARB No. 43, chapter 4. This statement clarifies the accounting for abnormal amounts of facility expense, freight, handling costs and wasted materials (spoilage) to require them to be recognized as current-period charges. This statement is effective for inventory costs incurred during fiscal years beginning after June 15, 2005. The adoption of this standard did not have

a material impact on the Company's consolidated balance sheet or statement of operations.

Options to purchase 43,440,695 and 44,523,285 shares outstanding during the three and six months ended July 2, 2006, respectively, were excluded from the computation of diluted shares because of their antidilutive effect on net income per share. Options to purchase 47,747,107 and 49,602,295 shares outstanding during the three and six months ended July 3, 2005, respectively, were excluded from the computation of diluted shares because of their antidilutive effect on net income per share.

For the three and six months ended July 2, 2006, weighted average potentially dilutive shares of 36,401,581 associated with the 2003 and 2001 Convertible Notes were excluded from the calculation of diluted shares because of their antidilutive effect on net income per share. For the three and six months ended July 3, 2005, weighted average potentially dilutive shares of 38,656,318 and 40,388,457 associated with the 2003 and 2001 Convertible Notes were excluded from the calculation of diluted shares because of their antidilutive effect on net income per share.

Table of Contents**NOTE 8 COMPREHENSIVE INCOME**

Comprehensive income is defined as a change in equity of a company during a period from transactions and other events and circumstances, excluding transactions resulting from investments by owners and distributions to owners. Comprehensive income, net of taxes for the current reporting period and comparable period in the prior year is as follows:

	Three Months Ended		Six Months Ended	
	July 2, 2006	July 3, 2005	July 2, 2006	July 3, 2005
	(In thousands)			
Net income	\$53,847	\$25,262	\$67,015	\$29,981
Change in unrealized (loss)/gain on derivative instruments designated as and qualifying as cash-flow hedges		(369)		(535)
Change in unrealized (loss)/gain on available-for-sale securities	(5,749)	(1,450)	(8,760)	(4,273)
Change in foreign currency translation adjustments	1,462	(3,341)	1,096	(6,790)
Comprehensive income	\$49,560	\$20,102	\$59,351	\$18,383

NOTE 9 SEGMENT REPORTING

The Company operates in two reportable segments the Semiconductor segment and the Storage Systems segment in which the Company offers products and services for a variety of electronic systems applications. LSI's products are marketed primarily to original equipment manufacturers (OEMs) that sell products to the Company's target markets. The information provided herein has been recast to include the RAID Storage Adapter (RSA) business as part of the Storage Systems segment from the Semiconductor segment for all periods presented.

The following is a summary of operations by segment for the three and six months ended July 2, 2006 and July 3, 2005:

	Three months ended		Six months ended	
	July 2, 2006	July 3, 2005	July 2, 2006	July 3, 2005
	(In thousands)			
Revenues:				
Semiconductor	\$307,391	\$325,163	\$605,765	\$629,201
Storage Systems	182,244	156,129	359,754	302,098
Total	\$489,635	\$481,292	\$965,519	\$931,299
Income from operations:				
Semiconductor	\$ 42,372	\$ 24,451	\$ 45,901	\$ 38,453
Storage Systems	12,684	1,838	25,626	125
Total	\$ 55,056	\$ 26,289	\$ 71,527	\$ 38,578

Intersegment revenues for the periods presented above were not significant. For the three months ended July 2, 2006, restructuring of operations and other items, a net credit of \$21.6 million, was primarily included in the Semiconductor segment. For the six months ended July 2, 2006, restructuring of operations and other items for the Semiconductor and Storage Systems segments were a net credit of \$17.3 million and a charge of \$1.3 million, respectively. For the three and six months ended July 3, 2005, restructuring of operations and other items, net of \$7.2 million and \$8.7 million, were primarily included in the Semiconductor segment.

Table of Contents

Significant Customers. The following table summarizes the number of our significant customers, each of whom accounted for 10.0% or more of the Company's revenues, along with the percentage of revenues they individually represent on a consolidated basis and by segment:

	Three months ended		Six months ended	
	July 2, 2006	July 3, 2005	July 2, 2006	July 3, 2005
Semiconductor segment:				
Number of significant customers	1	1	1	1
Percentage of segment revenues	19%	18%	19%	17%
Storage Systems segment:				
Number of significant customers	2	2	2	3
Percentage of segment revenues	46%, 16%	43%, 14%	45%, 15%	41%, 14%, 11%
Consolidated:				
Number of significant customers	2	2	2	2
Percentage of consolidated revenues	18%, 12%	15%, 12%	18%, 12%	14%, 11%

The following is a summary of total assets by segment as of July 2, 2006 and December 31, 2005:

	July 2, 2006	December 31, 2005
	(In thousands)	
Total assets:		
Semiconductor	\$2,401,223	\$2,285,913
Storage Systems	520,788	510,153
Total	\$2,922,011	\$2,796,066

Revenues from domestic operations were \$235.6 million, representing 48.1% of consolidated revenues for the three months ended July 2, 2006 compared to \$228.1 million, representing 47.4% of consolidated revenues for the three months ended July 3, 2005.

Revenues from domestic operations were \$472.5 million, representing 48.9% of consolidated revenues for the first six months ended July 2, 2006 compared to \$435.6 million, representing 46.8% of consolidated revenues for the first six months ended July 3, 2005.

NOTE 10 RELATED PARTY TRANSACTIONS

A member of our Board of Directors is also a member of the Board of Directors of Seagate Technology. The Company sells semiconductors used in storage product applications to Seagate Technology for prices an unrelated third party would pay for such products. Revenues associated with product sales to Seagate Technology were \$59.3 million and \$115.7 million for the three months and the six months ended July 2, 2006, respectively. Revenues associated with product sales to Seagate Technology were \$58.2 million and \$105.3 million for the three and six months ended July 3, 2005, respectively. The Company had accounts receivable due from Seagate Technology of \$48.3 million and \$41.2 million as of July 2, 2006 and December 31, 2005, respectively.

NOTE 11 COMMITMENTS, CONTINGENCIES AND LEGAL MATTERS

The Company is a party to a variety of agreements pursuant to which it may be obligated to indemnify the other party with respect to certain matters. Typically, these obligations arise in connection with contracts and license agreements or the sale of assets, under which the Company customarily agrees to hold the other party harmless against losses arising from a breach of warranties, representations and covenants related to such matters as title to assets sold, validity of certain intellectual property rights, non-

Table of Contents

infringement of third-party rights, and certain income tax-related matters. In each of these circumstances, payment by the Company is typically subject to the other party making a claim to and cooperating with the Company pursuant to the procedures specified in the particular contract. This usually allows the Company to challenge the other party's claims or, in case of breach of intellectual property representations or covenants, to control the defense or settlement of any third-party claims brought against the other party. Further, the Company's obligations under these agreements may be limited in terms of activity (typically to replace or correct the products or terminate agreement with a refund to the other party), duration and/or amounts. In some instances, the Company may have recourse against third parties and/or insurance covering certain payments made by the Company.

In February 1999, a lawsuit alleging patent infringement was filed in the United States District Court for the District of Arizona by the Lemelson Medical, Education & Research Foundation, Limited Partnership (Lemelson) against 88 electronics industry companies, including LSI. The case number is CIV990377PHXRGS. The patents involved in this lawsuit are alleged to relate to semiconductor manufacturing and computer imaging, including the use of bar coding for automatic identification of articles. The plaintiff has sought a judgment of infringement, an injunction, treble damages, attorneys' fees and further relief as the court may provide. In September 1999, the Company filed an answer denying infringement and raising affirmative defenses. In addition, the Company asserted a counterclaim for declaratory judgment of non-infringement, invalidity and unenforceability of Lemelson's patents. In December 2005, Lemelson filed a motion asking the Court to dismiss, with prejudice, all claims related to the fourteen computer imaging patents. LSI did not oppose the motion and the Court has dismissed those patents, with prejudice. In October 2005, the court issued a preliminary ruling on the claim construction of the four remaining patents, following a hearing in December 2004. At the court's request, the parties have submitted objections to the preliminary ruling. A final ruling on the claim construction was issued on August 8, 2006. No trial date has been set. While the Company can give no assurances regarding the final outcome of this lawsuit, the Company believes the allegations made by Lemelson are without merit and is defending the action vigorously.

The Company and its subsidiaries are parties to other litigation matters and claims that are normal in the course of its operations. The Company aggressively defends all legal matters and does not believe, based on currently available facts and circumstances, that the final outcome of these matters, taken individually or as a whole, will have a material adverse effect on the Company's consolidated results of operations and financial condition. However, the pending unsettled lawsuits may involve complex questions of fact and law and will likely require the expenditure of significant funds and the diversion of other resources to defend. From time to time the Company may enter into confidential discussions regarding the potential settlement of such lawsuits; however, there can be no assurance that any such discussions will occur or will result in a settlement. Moreover, the settlement of any pending litigation could require the Company to incur substantial costs and, in the case of the settlement of any intellectual property proceeding against the Company, may require the Company to obtain a license under a third party's intellectual property rights that could require royalty payments in the future and the Company to grant a license to certain of its intellectual property rights to a third party under a cross-license agreement. The results of litigation are inherently uncertain, and material adverse outcomes are possible.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

This Form 10-Q contains forward-looking statements. In many cases you can identify forward-looking statements by terminology such as may, will, should, expect, plan, anticipate, believe, estimate, predict, potential, continue, or the negative of such terms and other comparable terminology. In addition, forward-looking statements in this document include, but are not limited to, the following: projected revenues in for the three months ending October 1, 2006, projections of gross profit margins for the three months ending October 1, 2006 and projected capital expenditures in 2006. We assume no obligation to update any such forward-looking statements, and these statements involve risks and uncertainties that could cause actual results to differ materially from those in the forward-looking statements. For a summary of such risks and uncertainties, please see the paragraphs located in Part II, Item 1A entitled "Risk Factors" in Part II and please also see the Risk Factors located in our Annual Report on Form 10-K for the year ended December 31, 2005.

OVERVIEW

We are a leading provider of silicon-to-system solutions that are used at the core of products that create, store and consume digital information. We offer a broad portfolio of capabilities including custom and standard product integrated circuits, host bus and RAID adapters, storage area network solutions and software applications. Our products enable leading technology companies in the storage and consumer markets to deliver some of the most advanced and well-known electronic systems in the market today. During the three months ended July 2, 2006, we completed the sale of our Gresham, Oregon semiconductor manufacturing facility to ON Semiconductor for approximately \$105.0 million in cash. Under the terms of the agreement, ON Semiconductor offered employment

Table of Contents

to substantially all of the LSI manufacturing employees based at the Gresham site, with the remaining non-manufacturing workforce expected to continue their employment with LSI. ON Semiconductor also entered into additional agreements with LSI, including a multi-year wafer supply and test agreement, intellectual property license agreement, transition services agreement and a facilities use agreement. We also completed the sale of our ZSP digital signal processor technology during the three months ended July 2, 2006.

We operate in two segments – the Semiconductor segment and the Storage Systems segment – in which we offer products and services for a variety of electronic systems applications. Our products are marketed primarily to original equipment manufacturers (OEMs) that sell products to our target markets. The information provided herein has been recast to include the RAID Storage Adapter (RSA) business as part of the Storage Systems segment from the Semiconductor segment for all periods presented.

Revenues for the three months ended July 2, 2006 were \$489.6 million representing a 1.7% increase from \$481.3 million in revenues for the three months ended July 3, 2005. Revenues for the six months ended July 2, 2006 were \$965.5 million representing a 3.7% increase from \$931.3 million in revenues for the six months ended July 3, 2005. The increases in 2006 as compared to the prior year periods are attributable to higher revenues in the Storage Systems segment, offset in part by a decline in revenues for the Semiconductor segment.

We reported net income of \$53.8 million or \$0.13 a diluted share for the three months ended July 2, 2006 as compared to net income of \$25.3 million or \$0.06 a diluted share for the three months ended July 3, 2005. We reported net income of \$67.0 million or \$0.17 a diluted share for the six months ended July 2, 2006 as compared to net income of \$30.0 million or \$0.08 a diluted share for the six months ended July 3, 2005.

For the three months ending October 1, 2006, we expect our consolidated revenues to be in the range of \$475.0 million to \$500.0 million.

We expect our overall consolidated gross profit margins to be in the 42% to 43% range for the three months ending October 1, 2006.

Cash, cash equivalents and short-term investments were \$1.2 billion as of July 2, 2006 as compared to \$1.0 billion as of April 2, 2006 and \$938.9 million as of December 31, 2005. For the three and six months ended July 2, 2006, we generated \$49.4 million and \$149.0 million, respectively, in cash provided by operations as compared to \$59.8 million and \$119.1 million, respectively during the three and six months ended July 3, 2005.

Where more than one significant factor contributed to changes in results from year to year, we have quantified such factors throughout Management's Discussion & Analysis, where practicable.

RESULTS OF OPERATIONS**Revenues:**

	Three Months Ended		Six Months Ended	
	July 2, 2006	July 3, 2005	July 2, 2006	July 3, 2005
	(in millions)			
Semiconductor segment	\$307.4	\$325.2	\$605.8	\$629.2
Storage Systems segment	182.2	156.1	359.7	302.1
Consolidated	\$489.6	\$481.3	\$965.5	\$931.3

There were no significant intersegment revenues during the periods presented.

Three months ended July 2, 2006 compared to the three months ended July 3, 2005

Total consolidated revenues for the three months ended July 2, 2006 increased \$8.3 million or 1.7% as compared to the three months ended July 2, 2005.

Table of Contents

Semiconductor segment:

Revenues for the Semiconductor segment decreased \$17.8 million or 5.5% for the three months ended July 2, 2006 as compared to the three months ended July 2, 2005. The decrease in semiconductor revenues is attributable to the net effect of the following factors:

Revenues decreased for semiconductors used in consumer product applications such as videogame products, offset in part by increased demand for semiconductors used in digital audio players and cable set-top box solutions;

Revenues decreased for semiconductors used in storage product applications such as fiber channel and server products, offset in part by increases in revenues for semiconductors used in storage standard product applications such as Serial Attached SCSI (SAS) products.

The above noted decreases were offset in part by increases in revenues for semiconductors used in communication product applications such as office automation solutions, switches and wide area network (WAN) products.

Storage Systems segment:

Revenues for the Storage Systems segment increased \$26.1 million or 16.7% for the three months ended July 2, 2006 as compared to the three months ended July 3, 2005. The increase in revenues is primarily attributable to increased demand for the high-end controller product introduced in June of 2005.

Six months ended July 2, 2006 compared to the six months ended July 3, 2005

Total consolidated revenues for the first six months ended July 2, 2006 increased \$34.2 million or 3.7% as compared to the first six months ended July 3, 2005.

Semiconductor segment:

Revenues for the Semiconductor segment decreased \$23.4 million or 3.7% for the six months ended July 2, 2006 as compared to the first six months ended July 3, 2005. The decrease in semiconductor revenues is attributable to the net effect of the following factors:

Revenues decreased for semiconductors used in consumer product applications such as videogame products, offset in part by increased demand for semiconductors used in digital audio players and cable set-top box solutions;

Revenues increased for semiconductors used in communication product applications such as office automation solutions, switches and routers and increased demand for semiconductors used in storage standard product applications such as SAS products, offset in part by decreased demand for semiconductors used in storage product applications such as fiber channel and server products.

Storage Systems segment:

Revenues for the Storage Systems segment increased \$57.6 million or 19.1% for the first half of 2006 to the same period of 2005. The increase in revenues is primarily attributable to increased demand for a high-end controller product we introduced in June of 2005.

Significant Customers. The following table summarizes the number of our significant customers, each of whom accounted for 10% or more of our revenues, along with the percentage of revenues they individually represent on a consolidated basis and by segment:

Table of Contents

	Three months ended		Six months ended	
	July 2, 2006	July 3, 2005	July 2, 2006	July 3, 2005
Semiconductor segment:				
Number of significant customers	1	1	1	1
Percentage of segment revenues	19%	18%	19%	17%
Storage Systems segment:				
Number of significant customers	2	2	2	3
Percentage of segment revenues	46%, 16%	43%, 14%	45%, 15%	41%, 14%, 11%
Consolidated:				
Number of significant customers	2	2	2	2
Percentage of consolidated revenues	18%, 12%	15%, 12%	18%, 12%	14%, 11%

Revenues by geography. The following table summarizes our revenues by geography:

	Three months ended		Six months ended	
	July 2, 2006	July 3, 2005	July 2, 2006	July 3, 2005
	(in millions)			
Revenues:				
North America	\$235.6	\$228.1	\$472.5	\$435.6
Asia, including Japan	194.6	195.4	381.0	390.7
Europe	59.4	57.8	112.0	105.0
Total	\$489.6	\$481.3	\$965.5	\$931.3

Three months ended July 2, 2006 compared to the three months ended July 3, 2005

For the three months ended July 2, 2006, revenues increased in North America and Europe as compared to the three months ended July 3, 2005. The increase in North America is attributable to an increase in demand for semiconductors used in consumer product applications such as digital audio players and cable set-top box solutions and increased revenues for the Storage Systems segment. The increase was offset in part by decreased demand for semiconductors used in storage product applications such as fiber channel and server products and communication product applications such as custom solutions and wireless products. Revenues in Asia, including Japan, decreased for the three months ended July 2, 2006 as compared to the three months ended July 3, 2005. The decrease in revenues in Asia, including Japan, is attributable to decreased demand for semiconductors used in consumer product applications such as videogame products, offset in part by increased demand for semiconductors used in communication product applications as revenues continue to shift to Asia from other regions for custom solutions as well as increased revenues for semiconductors used in storage product applications such as SAS products. The increase in Europe is primarily attributable to increases in revenues for semiconductors used in storage custom solutions product applications such as fiber channel products and communication product applications.

Six months ended July 2, 2006 compared to the six months ended July 3, 2005

For the six months ended July 2, 2006, revenues increased in North America and Europe as compared to the six months ended July 3, 2005. The increase in North America is attributable to an increase in demand for semiconductors used in consumer product applications such as digital audio players and cable set-top box solutions. The increase was offset in part by decreased demand for semiconductors used in storage product applications such as fiber channel and server products and communication product applications such as communication custom solutions and wireless products and decreased revenues for the Storage System segment. Revenues in Asia, including Japan, decreased in the first six months of 2006 as compared to the same period of 2005. The decrease in revenues in Asia, including Japan, is attributable to decreased demand for semiconductors used in consumer product applications such as videogame

products. The decrease was offset in part by increases in demand for semiconductors used in communication product applications as revenues continue to shift to Asia from other regions for custom solutions as well as storage product applications such as SAS products. The increase in Europe is primarily attributable to increases in revenues for semiconductors used in storage product applications such as fiber channel products.

Table of Contents

Operating costs and expenses. Key elements of the consolidated statements of operations for the respective segments are as follows:

Gross profit margin:

	Three months ended		Six months ended	
	July 2, 2006	July 3, 2005	July 2, 2006	July 3, 2005
	(in millions)			
Semiconductor segment	\$ 150.2	\$ 158.0	\$ 289.6	\$ 300.5
Percentage of revenues	49%	49%	48%	48%
Storage Systems segment	\$ 59.0	\$ 53.6	\$ 124.1	\$ 101.2
Percentage of revenues	32%	34%	35%	33%
Consolidated	\$ 209.2	\$ 211.6	\$ 413.7	\$ 401.7
Percentage of revenues	43%	44%	43%	43%

Three months ended July 2, 2006 compared to the three months ended July 3, 2005

The consolidated gross profit margin as a percentage of revenues decreased to 42.7% for the three months ended July 2, 2006 from 44.0% for the three months ended July 3, 2005.

Semiconductor segment:

The gross profit margin as a percentage of revenues for the Semiconductor segment was 48.9% for the three months ended July 2, 2006. A more detailed description of factors affecting the gross profit margins for the three months ended July 2, 2006 as compared to the three months ended July 3, 2005 is as follows:

Manufacturing variances for the Gresham facility were more favorable for the three months ended July 2, 2006 compared to the three months ended July 3, 2005 as a result of yield improvements and operating cost savings attributable to write-downs recorded in the second half of 2005 related to the impairment of the Gresham manufacturing facility. These improvements were offset by:

An unfavorable shift in product mix including selling fewer semiconductors for applications such as video games for the three months ended July 2, 2006,

Lower average selling prices for semiconductors used in DVD-R products,

Stock-based compensation expense associated with the adoption of SFAS 123R as of January 1, 2006. See Note 2 of the Notes to the Consolidated Condensed Financial Statements (the Notes).

Storage Systems segment:

The gross profit margin as a percentage of revenues for the Storage Systems segment decreased to 32.4% for the three months ended July 2, 2006 from 34.3% for the three months ended July 3, 2005. The decrease in gross profit margins is attributable to start-up costs related to the introduction of our new mid-range system product and stock-based compensation expense associated with the adoption of SFAS 123R on January 1, 2006.

Six months ended July 2, 2006 compared to the six months ended July 3, 2005

The consolidated gross profit margin as a percentage of revenues was flat for the six months ended July 2, 2006 as compared to the six months ended July 3, 2005. The consolidated gross margin as a percentage of revenues was 42.8% and 43.1% for the six months ended July 2, 2006 and July 3, 2005, respectively.

Table of Contents

Semiconductor segment:

The gross profit margin as a percentage of revenues for the Semiconductor segment was flat for the six months ended July 2, 2006 as compared to the six months ended July 3, 2005. The Semiconductor segment gross margin as a percentage of revenues is 47.8% for the six months ended July 2, 2006 and July 3, 2005. A more detailed description of factors affecting the gross profit margins in the first half of 2006 as compared to the same period of 2005 is as follows:

Manufacturing variances for the Gresham facility were more favorable for the first six months of 2006 compared to the same period of 2005 as a result of yield improvements and operating cost savings attributable to write-downs recorded for the six months ended July 3, 2005 related to the impairment of the Gresham manufacturing facility. These improvements were offset by:

An unfavorable shift in product mix including selling fewer semiconductors for applications such as video games for the three months ended July 2, 2006,

Lower average selling prices for semiconductors used in DVD-R products, and

Stock-based compensation expense associated with the adoption of SFAS 123R as of January 1, 2006 (See Note 2 of the Notes).

Storage Systems segment:

The gross profit margin as a percentage of revenues for the Storage Systems segment increased to 34.5% for the six months ended July 2, 2006 from 33.5% for the six months ended July 3, 2005. The increase in gross profit margins is attributable to improved product mix associated with the introduction of our new high-end controller product in June of 2005 and material cost reductions in the first half of 2006. These increases were offset in part by the start-up costs related to the introduction of our new mid-range system product and stock-based compensation expense associated with the adoption of SFAS 123R on January 1, 2006.

During the three months ended July 2, 2006, we completed the sale of our Gresham, Oregon semiconductor manufacturing facility to ON Semiconductor for approximately \$105.0 million in cash. Under the terms of the agreement, ON Semiconductor offered employment to substantially all of the LSI manufacturing employees based at the Gresham site, with the remaining non-manufacturing workforce expected to continue their employment with LSI. ON Semiconductor also entered into additional agreements with LSI, including a multi-year wafer supply and test agreement, intellectual property license agreement, transition services agreement and a facilities use agreement.

We own our Storage Systems segment manufacturing facility in Wichita, Kansas. In addition, we acquire wafers, assembly and test services from vendors in Taiwan, Japan, Malaysia, Korea, Mexico, Thailand, Singapore and China and outsource a portion of our Storage Systems segment manufacturing to facilities in Ireland. Utilizing diverse manufacturing locations allows us to better manage potential disruption in the manufacturing process due to economic and geographic risks associated with each location.

Our operating environment, combined with the resources required to operate in the Semiconductor and Storage Systems industries, requires that we manage a variety of factors. These factors include, among other things:

Competitive pricing pressures;

Product mix;

Factory capacity and utilization;

Geographic location of manufacturing;

Manufacturing yields;

Availability of certain raw materials;

Table of Contents

Adoption of new industry standards;

Terms negotiated with third-party subcontractors; and

Foreign currency fluctuations.

These and other factors could have a significant effect on our gross profit margin in future periods.

Research and development:

	Three months ended		Six months ended	
	July 2, 2006	July 3, 2005	July 2, 2006	July 3, 2005
	(in millions)			
Semiconductor segment	\$ 77.6	\$ 77.6	\$ 159.2	\$ 156.8
Percentage of revenues	25%	24%	26%	25%
Storage Systems segment	\$ 22.8	\$ 22.6	\$ 43.4	\$ 43.5
Percentage of revenues	13%	15%	12%	14%
Consolidated	\$ 100.4	\$ 100.2	\$ 202.6	\$ 200.3
Percentage of revenues	21%	21%	21%	22%

Three months ended July 2, 2006 compared to the three months ended July 3, 2005

Research and development (R&D) expenses remained relatively flat for the three months ended July 2, 2006 as compared to the three months ended July 3, 2005.

Semiconductor segment:

R&D expenses in the Semiconductor segment remained relatively flat for the three months ended July 2, 2006 as compared to the three months ended July 3, 2005. R&D expenses for the Semiconductor segment increased primarily as the result of an increase in stock-based compensation expense associated with the adoption of SFAS 123R on January 1, 2006 and higher salaries due to annual merit increases, offset by lower depreciation and amortization related expenses and lower spending on design engineering programs.

Table of Contents

Storage Systems segment:

R&D expenses in the Storage Systems segment remained relatively flat for the three months ended July 2, 2006 as compared to the three months ended July 3, 2005. R&D expenses as a percentage of Storage Systems segment revenues were 12.5% for the second quarter of 2006 as compared to 14.5% for the same period of 2005 due to an increase in revenues for the three months ended July 2, 2006 as compared to the three months ended July 3, 2005, offset in part by an increase in stock-based compensation expense associated with the adoption of SFAS 123R on January 1, 2006.

Six months ended July 2, 2006 compared to the six months ended July 3, 2005

R&D expenses increased \$2.3 million or 1.1% during the first six months ended July 2, 2006 as compared to the six months ended July 3, 2005.

Semiconductor segment:

R&D expenses in the Semiconductor segment increased \$2.4 million or 1.5% in the six months ended July 2, 2006 as compared to the six months ended July 3, 2005. The increase in R&D expenses for the Semiconductor segment is primarily the result of an increase in stock-based compensation expense associated with the adoption of SFAS 123R on January 1, 2006, and higher salaries due to annual merit increases, offset primarily by lower depreciation and amortization related expenses and lower spending on design engineering programs.

Table of Contents*Storage Systems segment:*

R&D expenses in the Storage Systems segment remained relatively flat in the first six months of 2006 as compared to the same period of 2005. R&D expenses as a percentage of Storage Systems segment revenues were 12.1% for the first six months of 2006 as compared to 14.4% for the same period of 2005 due to an increase in revenues year over year, offset in part by an increase in stock-based compensation expense associated with the adoption of SFAS 123R on January 1, 2006 .

Selling, general and administrative:

	Three months ended		Six months ended	
	July 2, 2006	July 3, 2005	July 2, 2006	July 3, 2005
	(in millions)			
Semiconductor segment	\$43.2	\$ 38.3	\$ 83.5	\$ 75.5
Percentage of revenues	14%	12%	14%	12%
Storage Systems segment	\$21.4	\$ 22.0	\$ 50.0.	\$ 43.4
Percentage of revenues	12%	14%	14%	14%
Consolidated	\$64.6	\$ 60.3	\$133.5	\$118.9
Percentage of revenue	13%	13%	14%	13%

Three months ended July 2, 2006 compared to the three months ended July 3, 2005

Consolidated selling, general and administrative (SG&A) expenses increased \$4.3 million or 7.1% for the three months ended July 2, 2006 as compared to the three months ended July 3, 2005. Silicon Graphics, a customer of ours, filed for bankruptcy protection under Chapter 11 of the United States Bankruptcy Code on May 8, 2006. As a result of this action, we recorded a \$1.3 million charge for the three months ended July 2, 2006 because we do not believe the receivable balance as of July 2, 2006 is collectible. This charge mainly relates to the Storage Systems segment. We perform ongoing credit evaluations of our customers' financial condition and require collateral as considered necessary.

Semiconductor segment:

SG&A expenses for the Semiconductor segment increased \$4.9 million or 12.8% for the three months ended July 2, 2006 as compared to the three months ended July 3, 2005. The increase in the Semiconductor segment was primarily due to an increase in stock-based compensation associated with SFAS 123R (See Note 2 of the Notes), offset in part by lower sales commissions.

Storage Systems segment:

SG&A expenses for the Storage Systems segment decreased \$0.6 million or 2.7% for the three months ended July 2, 2006 as compared to the three months ended July 3, 2005. The decrease in SG&A expenses for the three months ended July 2, 2006 as compared to the three months ended July 3, 2005 is mainly attributable to cost cutting measures put in place over the last 12 months. The decreases were offset by:

A \$1.3 million charge recorded in the three months ended July 2, 2006 to reduce a receivable balance with a customer, Silicon Graphics, as discussed above; and

Stock-based compensation associated with the adoption of SFAS 123R.

Six months ended July 2, 2006 compared to the six months ended July 3, 2005

Consolidated SG&A expenses increased \$14.6 million or 12.3% during the six months ended July 2, 2006 as compared to the three months ended July 3, 2005. Silicon Graphics, a customer of ours, filed for bankruptcy protection under Chapter 11 of the United States Bankruptcy Code on May 8, 2006. As a result of this action, we recorded a \$6.9 million charge for the six months ended July 2, 2006 because we do not believe the receivable balance as of July 2, 2006 is collectible. Of this charge, \$6.7 million relates to the Storage Systems segment and \$0.2 million relates to the Semiconductor segment. We perform ongoing credit evaluations of our customers' financial condition

and require collateral as considered necessary.

Table of Contents*Semiconductor segment:*

SG&A expenses for the Semiconductor segment increased \$8.0 million or 10.6% for the six months of 2006 as compared to the same period of 2005. The increase in the Semiconductor segment was primarily due to an increase in stock-based compensation associated with SFAS 123R, offset in part by lower sales commissions.

Storage Systems segment:

SG&A expenses for the Storage Systems segment increased \$6.6 million or 15.2% in the first six months of 2006 as compared to the same period of 2005. The increase in SG&A expenses for the first six months of 2006 as compared to the first six months of 2005 is mainly due to the following:

A \$6.7 million charge recorded for the six months ended July 2, 2006 to reduce a receivable balance with Silicon Graphics, as discussed above;

An increase in expense associated with new product launches; and

Stock-based compensation associated with the adoption of SFAS 123R.

Restructuring of operations and other items: We recorded a net credit of \$21.6 million and a net credit of \$16.0 million in restructuring of operations and other items for the three and six months ended July 2, 2006, respectively. Of these credits, \$21.9 million and \$17.3 million were recorded in the Semiconductor segment and a charge of \$0.3 million and a charge of \$1.3 million were recorded in the Storage Systems segment for the three and six months ended July 2, 2006, respectively. We recorded charges of \$7.2 million and \$8.7 million in restructuring of operations and other items for the three and six months ended July 3, 2005, respectively, primarily in the Semiconductor segment. See Note 3 of the Notes. For a complete discussion of the 2005 restructuring actions, please refer to our Annual Report on Form 10-K for the year ended December 31, 2005.

Stock-based compensation: On January 1, 2006, we adopted SFAS 123R, using the modified prospective transition method. Using the modified prospective transition method of adopting SFAS 123R, we began recognizing compensation expense for all share-based awards granted after January 1, 2006 plus unvested awards granted prior to January 1, 2006. Under this method of implementation, no restatement of prior periods has been made. Stock-based compensation expense under SFAS 123R in the consolidated condensed statements of operations for the three and six months ended July 2, 2006 was \$13.3 million and \$25.1 million, respectively.

The estimated fair value of our equity-based awards, less expected forfeitures, is amortized over the awards vesting period on a straight-line basis. The implementation of SFAS 123R did not have a significant impact on cash flows from operations during the three and six months ended July 2, 2006. See Note 2 to the Notes for a further discussion on stock-based compensation.

Amortization of intangibles: Amortization of intangible assets was \$10.8 million and \$22.0 million for the three and six months ended July 2, 2006, respectively, as compared to \$17.6 million and \$35.2 million for the three and six months ended July 3, 2005, respectively. The decrease is primarily a result of certain intangible assets becoming fully amortized during 2005 and also due to the write-off of certain intangible assets acquired in a purchase business combination for the three months ended July 2, 2006. As of July 2, 2006, we had approximately \$20.6 million of intangible assets, net of accumulated amortization that will continue to amortize.

Interest expense: Interest expense increased slightly by \$0.1 million to \$6.4 million for the three months ended July 2, 2006 from \$6.3 million for the three months ended July 3, 2005. Interest expense decreased slightly by \$0.3 million to \$12.7 million for the six months ended July 2, 2006 from \$13.0 million for the six months ended July 3, 2005. The decrease is due to a lower debt balance from the repurchase of \$149.7 million of the 2001 Convertible Notes in the second quarter of 2005.

Interest income and other, net: Interest income and other, net, was \$10.3 million for the three months ended July 2, 2006 as compared to \$11.5 million for the three months ended July 3, 2005. Interest income increased to \$11.9 million for the three months ended July 2, 2006 from \$5.5 million for the three months ended July 3, 2005. The increase in interest income is mainly due to higher returns and higher average cash and short-term investment balances during the three months ended July 2, 2006 as compared to the three months ended July 3, 2005. Other expenses, net of \$1.6 million for the three months ended July 2, 2006 included a \$1.1 million charge for points on foreign currency forward contracts, a pre-tax loss of \$0.2 million on the sale of certain marketable available-for-

Table of Contents

sale equity securities of a certain technology company that was acquired by another technology company (see Note 4 of the Notes) and other miscellaneous items that net to an expense of \$0.3 million. Other income, net of \$6.0 million for the three months ended July 2, 2005 included a pre-tax gain of \$4.1 million on the repurchase of the 2001 Convertible Notes, a pre-tax gain of \$2.4 million on certain marketable available-for-sale equity securities (see Note 4 of the Notes) and other miscellaneous items that net to an expense of \$0.5 million.

Interest income and other, net increased to \$19.8 million during the six months ended July 2, 2006 as compared to \$16.9 million for the six months ended July 3, 2005. Interest income increased to \$21.1 million during the first six months of 2006 from \$11.6 million for the same period of 2005. The increase in interest income is mainly due to higher returns and higher average cash and short-term investment balances for the six months ended July 2, 2006 as compared to the six months ended July 3, 2005. Other expenses, net of \$1.3 million for the six months ended July 2, 2006, included a \$2.2 million charge for points on foreign currency forward contracts, a pre-tax loss of \$0.2 million on the sale of certain marketable available-for-sale equity securities of a certain technology company that was acquired by another company for the three months ended July 2, 2006 (see Note 4 of the Notes) and other miscellaneous items, offset in part by a pre-tax gain of \$1.4 million on the sale of certain marketable available-for-sale equity securities for the three months ended April 2, 2006 (see Note 4 of the Notes). Other income, net of \$5.3 million in the first six months of 2005 included a pre-tax gain of \$4.1 million on the repurchase of the 2001 Convertible Notes, a pre-tax gain of \$2.9 million on sales of certain marketable available-for-sale equity securities for the three months ended July 3, 2005 and other miscellaneous expense items.

Provision for income taxes: During the three and six months ended July 2, 2006 we recorded income tax expenses of \$5.1 million and \$11.6 million, respectively. For the three and six months ended July 3, 2005, we recorded income tax expenses of \$6.3 million and \$12.5 million, respectively. The expenses primarily relate to foreign income taxes.

The provision for income taxes for the three months ended July 2, 2006 includes tax benefits of \$2.6 million relating to settlements of tax audits in foreign jurisdictions, which were treated as discrete items allocable to the quarter.

Excluding certain foreign jurisdictions, our management believes that the future benefit of deferred tax assets, including stock based compensation awards, is more than likely not to be realized.

FINANCIAL CONDITION, CAPITAL RESOURCES AND LIQUIDITY

Cash, cash equivalents and short-term investments increased to \$1.2 billion at July 2, 2006, from \$938.9 million at December 31, 2005. The increase is mainly due to cash and cash equivalents provided by operating and financing activities, partially offset by net cash outflows for investing activities as described below.

Working capital. Working capital increased by \$137.9 million to \$1.0 billion at July 2, 2006, from \$877.4 million as of December 31, 2005. The increase in working capital is attributable to the following:

Cash, cash equivalents and short-term investments increased by \$261.7 million.

Accrued salaries, wages and benefits decreased by \$18.4 million primarily due to timing differences in payment of salaries, benefits and performance-based compensation.

Current portion of long-term obligation decreased by \$1.3 million due to the amortization of deferred gain on the terminated Swaps.

The increase in working capital was offset, in part, by the following:

Prepaid expenses and other current assets decreased by \$77.4 million primarily due to decreases in assets held for sale of \$100.3 million mainly due to the sale of our Gresham Oregon manufacturing facility and two Colorado facilities, offset in part by an increase in other receivable of \$15.0 million from ON Semiconductor in connection with the sale of Gresham manufacturing facility and \$7.7 million from the sale of our ZSP digital signal processor unit, an increase in prepaid software maintenance and other miscellaneous items which are individually insignificant. (See Note 3 of the Notes).

Table of Contents

Inventories decreased by \$21.0 million to \$173.8 million as of July 2, 2006, from \$194.8 million as of December 31, 2005. The decline in inventory levels reflects a) our continued focus on supply chain management and b) inventory sold to ON Semiconductor as part of the sale of the Gresham manufacturing facility.

Accounts payable increased by \$17.1 million due to the timing of invoice receipt and payments.

Accounts receivable decreased by \$12.5 million to \$310.8 million as of July 2, 2006 from \$323.3 million as of December 31, 2005. The decrease is mainly attributed to lower revenues and improved collections during the three months ended July 2, 2006 as compared to the three months ended December 31, 2005.

Other accrued liabilities increased by \$8.9 million due to increases in the restructuring reserve (Note 3 of the Notes) and deferred revenue, offset in part by other miscellaneous items which are individually insignificant.

Income taxes payable increased by \$6.5 million due to the timing of income tax payments made and the income tax provision recorded during the six months ended July 2, 2006.

Cash and cash equivalents generated from operating activities. During the six months ended July 2, 2006, we generated \$149.0 million of net cash and cash equivalents from operating activities compared to \$119.1 million generated during the six months ended July 3, 2005. Cash and cash equivalents generated by operating activities for the six months ended July 2, 2006, were the result of the following:

Net income adjusted for non-cash transactions. The non-cash items and other non-operating adjustments are quantified in our Consolidated Condensed Statements of Cash Flows included in this Form 10-Q; and

A net increase in assets and liabilities, including changes in working capital components from December 31, 2005 to July 2, 2006, as discussed above.

The adoption of SFAS 123R did not have an impact on cash flows from operations for the six months ended July 2, 2006.

Cash and cash equivalents (used in)/ provided by investing activities. Cash and cash equivalents used in investing activities were \$86.9 million for the six months ended July 2, 2006, as compared to \$16.0 million provided by investing activities for the six months ended July 3, 2005. The primary investing activities for the six months ended July 2, 2006 were as follows:

Purchases of debt and equity securities available for sale, net of sales and maturities; and

Proceeds from sale of Gresham, Oregon manufacturing facility, two Colorado facilities and intellectual property, net of purchases of property, equipment and software.

We expect capital expenditures to be approximately \$45.0 million in 2006. In recent years, we have reduced our level of capital expenditures as a result of our focus on establishing strategic supplier alliances with foundry semiconductor manufacturers, which enables us to have access to advanced manufacturing capacity, and reduces our capital spending requirements.

Cash and cash equivalents provided by/ (used in) financing activities. Cash and cash equivalents provided by financing activities for the six months ended July 2, 2006 were \$32.1 million as compared to \$135.4 million used in financing activities for the six months ended July 3, 2005. The primary financing activities for the three months ended July 2, 2006 were the issuance of common stock under our employee stock option and purchase plans.

We may seek additional equity or debt financing from time to time. We believe that our existing liquid resources and funds generated from operations, combined with funds from such financing and our ability to borrow funds will be adequate to meet our operating and capital requirements and obligations for the foreseeable future. However, we cannot be certain that additional financing will be available on favorable terms. Moreover, any future equity or convertible debt financing will decrease the percentage of equity ownership of existing stockholders and may result in dilution, depending on the price at which the equity is sold or the debt is converted.

Table of Contents**Contractual Obligations**

The following table summarizes our contractual obligations at July 2, 2006, and the effect of these obligations is expected to have on our liquidity and cash flow in future periods.

	Payments due by period				Total
	Less than 1 year	1 3 years	4 5 years (in millions)	After 5 years	
Contractual Obligations					
Convertible Subordinated Notes	\$271.8	\$	\$350.0	\$	\$ 621.8
Operating lease obligations	41.8	53.2	37.6	13.8	146.4
Purchase commitments	374.9	55.5	0.1		430.5
Total	\$688.5	\$108.7	\$387.7	\$13.8	\$1,198.7

Convertible Subordinated Notes

As of July 2, 2006, we had \$271.8 million of Convertible Subordinated Notes due in November 2006 (2001 Convertible Notes) and \$350.0 million of Convertible Subordinated Notes due in May 2010 (2003 Convertible Notes). All of the Convertible Notes are subordinated to all existing and future senior debt and are convertible at the holder's option, at any time prior to the maturity date of the Convertible Notes, into shares of our common stock. The 2001 and 2003 Convertible Notes have conversion prices of approximately \$26.34 per share and \$13.42 per share, respectively. The 2001 Convertible Notes are redeemable at our option, in whole or in part, on at least 30 days notice at any time on or after the call date, which is two years before the due date. We cannot elect to redeem the 2003 Convertible Notes prior to maturity. Each holder of the 2001 and 2003 Convertible Notes has the right to cause us to repurchase all of such holder's convertible notes at 100.0% of their principal amount plus accrued interest upon the occurrence of any fundamental change to us, which includes a transaction or event such as an exchange offer, liquidation, tender offer, consolidation, merger or combination. Interest is payable semiannually.

Fluctuations in our stock price impact the prices of our outstanding convertible securities and the likelihood of the convertible securities being converted into cash or equity. If we are required to redeem any of the Convertible Notes for cash, it may affect our liquidity position. In the event they do not convert to equity, we believe that our current cash position and expected future operating cash flows will be adequate to meet these obligations as they mature. From time to time, we redeem or repurchase Convertible Notes.

Operating Lease Obligations

We lease real estate, certain non-manufacturing equipment and software under non-cancelable operating leases.

Purchase Commitments

We maintain certain purchase commitments, primarily for raw materials, with suppliers and for some non-production items. Purchase commitments for inventory materials are generally restricted to a forecasted time-horizon as mutually agreed upon between the parties. This forecasted time-horizon can vary among our different suppliers.

In connection with the sale of the Gresham, Oregon manufacturing facility in May of 2006, we entered into a multi-year wafer supply agreement. The wafer supply agreement includes a minimum purchase commitment whereby LSI has agreed to purchase \$198.8 million in wafers from ON Semiconductor from the date of the sale through the second quarter of 2008. These commitments have been included in the table above.

Critical Accounting Policies

The discussion and analysis of our financial condition and results of operations are based on the consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements requires estimates and assumptions that affect the reported amounts and disclosures. For a detailed discussion of our critical accounting policies, please see the Critical Accounting Policies contained in Part II, Item 7 of the Management's Discussion and Analysis of Financial Condition and Results of Operations in our Annual Report on Form 10-K for the year ended December 31, 2005. A new critical

accounting policy has been added with the adoption of SFAS 123R effective January 1, 2006.

Table of Contents*Stock-Based compensation:*

On January 1, 2006, we adopted SFAS 123R, using the modified prospective transition method. In accordance with the modified prospective transition method, we began recognizing compensation expense for all share-based awards granted after January 1, 2006 plus unvested awards granted prior to January 1, 2006. Under this method of implementation, no restatement of prior periods has been made. Stock-based compensation expense under SFAS 123R in the consolidated condensed statements of operations for the three and six months ended July 2, 2006 was approximately \$13.3 million and \$25.1 million, respectively. See Note 2 of the Notes for a description of our equity compensation plans and a more detailed discussion of the adoption of SFAS 123R.

Stock Options

The fair value of each option grant is estimated on the date of grant using a reduced form calibrated binomial lattice model (the Lattice Model). This model requires the use of historical data for employee exercise behavior and the use of assumptions as follows:

	Three months ended July 2, 2006	Six months ended July 2, 2006
Employee Stock Options Granted		
Weighted average estimated grant date fair value	\$ 3.95	\$ 3.59
Weighted average assumptions in calculation:		
Expected life (years)	4.35	4.29
Risk-free interest rate	5%	5%
Volatility	48%	48%
Dividend yield		

The expected life of employee stock options represents the weighted-average period the stock options are expected to remain outstanding and is a derived output of the Lattice Model. The expected life of employee stock options is impacted by all of the underlying assumptions and calibration of our model.

We used an equally weighted combination of historical and implied volatilities as of the grant date. The historical volatility is the standard deviation of the daily stock returns for LSI from the date of our initial public offering in 1983. We used implied volatilities of near-the-money LSI traded call options since stock options are call options that are granted at the money. The historical and implied volatilities were annualized and equally weighted to determine the volatilities as of the grant date. Prior to January 1, 2006, we used historical implied stock price volatilities in accordance with SFAS 123 for purposes of its pro forma information. Our management believes that the equally weighted combination of historical and implied volatilities is more representative of future stock price trends than historical implied volatilities.

The risk-free interest rate assumption is based upon observed interest rates for constant maturity treasuries appropriate for the term of our employee stock options. The estimated kurtosis and skewness are technical measures of the distribution of stock price returns that are based on stock price return history as well as consideration of academic analyses.

The Lattice Model assumes that employees' exercise behavior is a function of the option's remaining vested life and the extent to which the option is in-the-money. The Lattice Model estimates the probability of exercise as a function of these two variables based on the entire history of exercises and cancellations on all past option grants made by us since the initial public offering in 1983.

As stock-based compensation expense recognized in the consolidated condensed statement of operations for the three months ended July 2, 2006 is based on awards ultimately expected to vest, it has been reduced for estimated forfeitures. SFAS 123R requires forfeitures to be estimated at the time of grant and revised, if necessary, in subsequent periods if actual forfeitures differ from those estimates. Forfeitures were estimated based on historical experience. For our pro forma information required under SFAS 123 for the periods prior to January 1, 2006, we accounted for forfeitures as they occurred.

Employee Stock Purchase Plans

The Company also has two employee stock purchase plans (ESPPs US ESPP and IESPP) under which rights are granted to all employees to purchase shares of common stock at 85.0% of the lesser of the fair market value of such shares at the beginning of a 12-month offering period or the end of each six-month purchase period within such an offering period, typically in May and November. Compensation expense is calculated using the fair value of the employees purchase rights under the Black-Scholes model. During the three months ended July 2, 2006, a total of 1.9 million shares related to the ESPPs were issued. There were approximately 20.1 million shares of common stock reserved for issuance under the ESPPs as of July 2, 2006. The stock-based compensation expense for the three months ended July 2, 2006 stemming from the May 14, 2006 ESPP grants was not significant

Table of Contents

because the majority of employees of the Company enrolled in the 12-month purchase period in November of 2005 and will not re-enroll until November of 2006. For disclosure purposes, we have included the assumptions that went into the calculation of fair value for the May 2006 as follows:

	Three months ended July 2, 2006
Employee Stock Purchase Plans Granted	
Weighted average estimated grant date fair value	\$ 3.05
Weighted average assumptions in calculation:	
Expected life (years)	0.8
Risk-free interest rate	5%
Volatility	39%
Dividend yield	
<i>Restricted Stock Awards</i>	

The cost of these awards is determined using the fair value of our common stock on the date of the grant and compensation expense is recognized over the vesting period on a straight-line basis.

Our determination of fair value of share-based payment awards on the date of grant using an option-pricing model is affected by our stock price as well as assumptions regarding a number of highly complex and subjective assumptions. We use third-party consultants to assist in developing the assumptions used in as well as calibrating the Lattice Model. We are responsible for determining the assumptions used in estimating the fair value of its share based payment awards. Option-pricing models were developed for use in estimating the value of traded options that have no vesting or hedging restrictions and are fully transferable. Because our employee stock options have certain characteristics that are significantly different from traded options, and because changes in the subjective assumptions can materially affect the estimated value, in management's opinion, the existing valuation models may not provide an accurate measure of the fair value of our employee stock options. Although, the fair value of employee stock options is determined in accordance with SFAS 123R and SAB 107 using an option-pricing model, that value may not be indicative of the fair value observed in a willing buyer/willing seller market transaction.

Recent Accounting Pronouncements

The information contained in Item 1 of Note 1 of the Notes under the heading Recent Accounting Pronouncements is hereby incorporated by reference into this Item 2.

Item 3. Quantitative and Qualitative Disclosures about Market Risk

There have been no significant changes in the market risk disclosures during the three months ended July 2, 2006, as compared to the discussion in Part II, Item 7a of our Annual Report on Form 10-K for the year ended December 31, 2005.

Item 4. Controls and Procedures

Our management evaluated, with the participation of our chief executive officer and our chief financial officer, the effectiveness of our disclosure controls and procedures pursuant to Rule 13a-15 promulgated under the Securities Exchange Act of 1934 as of July 2, 2006. Based on this evaluation, our chief executive officer and our chief financial officer have concluded that our disclosure controls and procedures are effective to ensure that information we are required to disclose in reports that we file or submit under the Securities Exchange Act of 1934, as amended, is recorded, processed, summarized and reported within the time periods specified in Securities and Exchange Commission rules and forms.

During the three months ended July 2, 2006, there have been no changes in our internal control over financial reporting (as defined in Rule 13a-15 under the Exchange Act) that have materially affected, or are reasonably likely to materially affect, our control over financial reporting.

Table of Contents**PART II OTHER INFORMATION****Item 1. Legal Proceedings**

This information is included in Note 11 (Legal Matters) of the Notes to the Unaudited Consolidated Condensed Financial Statements, which information is incorporated herein by reference from Item 1 of Part I hereof.

Item 1A. Risk Factors

We are subject to a number of risks. Some of these risks are endemic to the semiconductor industry and are the same or similar to those disclosed in our previous SEC filings, and some new risks may arise in the future. The reader should carefully consider all of these risks and other information in this Form 10-Q before investing in our stock. The fact that certain risks are endemic to the high-technology industry does not lessen the significance of these risks.

As a result of these risks, our business, financial conditions or results of operations could be materially and adversely affected. This could cause the trading price of our common stock to decline, and stockholders might lose some or all of their investment.

Please consider these risk factors when you read forward-looking statements elsewhere in this Form 10-Q and in the documents incorporated herein by reference. Forward-looking statements are statements that relate to our expectations for future events and time periods. Generally, the words, anticipate, expect, intend and similar expressions identify forward-looking statements. Forward-looking statements involve risks and uncertainties, and actual results could differ materially from those anticipated in the forward-looking statements.

General economic weakness and geopolitical factors may harm our operating results and financial condition. The semiconductor industry is cyclical in nature and is characterized by wide fluctuations in product supply and demand. In the past, the industry has experienced periods of rapid expansion of production capacity followed by periods of significant downturn. Even when the demand for our products remains constant, the availability of additional excess production capacity in the industry creates competitive pressures that can degrade pricing levels, which can reduce revenues. In addition, our results of operations are dependent on the global economy. Any geopolitical factors such as terrorist activities, armed conflict or global health conditions, which adversely affect the global economy, may adversely impact our operating results and financial condition. In addition, goodwill and other long-lived assets could be impacted by a decline in revenues because impairment is measured based upon estimates of future cash flows. These estimates include assumptions about future conditions within our company and industry.

We depend entirely on independent foundry subcontractors to manufacture our semiconductor products; accordingly, any failure to secure and maintain sufficient foundry capacity could materially and adversely affect our business. During the three months ended July 2, 2006, we completed the sale of the Gresham, Oregon semiconductor manufacturing facility to ON Semiconductor. As a result of this transaction, we are completely dependent on foundry subcontractors for the manufacture of our semiconductor products. In conjunction with the sale of the facility, we entered into a wafer supply and test agreement with ON Semiconductor. Other foundry subcontractors, located in Asia, currently manufacture the remainder of our semiconductor devices.

Availability of foundry capacity has in the recent past been reduced due to strong demand. In addition, the occurrence of a public health emergency could further affect the production capabilities of our manufacturers by resulting in quarantines or closures. If we are unable to secure sufficient capacity at our existing foundries, or in the event of a quarantine or closure at any of these foundries, our revenues, cost of revenues and results of operations would be negatively impacted. If any of our foundries experiences a shortage in capacity, or suffers any damage to its facilities due to earthquakes or other natural disasters, experiences power outages, encounters financial difficulties or experiences any other disruption of foundry capacity, we may need to qualify an alternative foundry in a timely manner. Even our current foundries need to have new manufacturing processes qualified if there is a disruption in an existing process. We typically require several months to qualify a new foundry or process before we can begin shipping products. We may experience a significant interruption in the supply of the affected products, depending on the success and timeliness of a qualification.

Because we rely exclusively on outside foundries with limited capacity, we face several significant risks, including:

a lack of guaranteed wafer supply and potential wafer shortages and higher wafer prices;

limited control over delivery schedules, quality assurance, manufacturing yields and production costs; and

the unavailability of, or potential delays in obtaining access to, key process technologies.

In addition, the manufacture of integrated circuits is a highly complex and technologically demanding process. Although we work closely with our foundries to minimize the likelihood of reduced manufacturing yields, our foundries have, from time to time,

Table of Contents

experienced lower than anticipated manufacturing yields. This often occurs during the production of new products or the installation and start-up of new process technologies. Poor yields from our foundries could result in product shortages or delays in product shipments, which could seriously harm our relationships with our customers and materially and adversely affect our results of operations.

The ability of each foundry to provide us with semiconductor devices is limited by its available capacity and existing obligations. Although we have entered into contractual commitments to supply specified levels of products to some of our customers, we do not have a long-term volume purchase agreement or a significant guaranteed level of production capacity with any of our foundries. Foundry capacity may not be available when we need it or at reasonable prices. Availability of foundry capacity has in the recent past been reduced from time to time due to strong demand. We place our orders on the basis of our customers' purchase orders or our forecast of customer demand, and the foundries can allocate capacity to the production of other companies' products and reduce deliveries to us on short notice. It is possible that other foundry customers that are larger and better financed than we are, or that have long-term agreements with our main foundries, may induce our foundries to reallocate capacity to them. This reallocation could impair our ability to secure the supply of components that we need. Although we use a number of independent foundries to manufacture our semiconductor products, most of our components are not manufactured at more than one foundry at any given time nor are our products typically designed to be manufactured in more than one specific process at. Accordingly, if one of our foundries is unable to provide us with components as needed, we could experience significant delays in securing sufficient supplies of those components. Also, our third party foundries typically migrate capacity to newer, state-of-the-art manufacturing processes on a regular basis, which may create capacity shortages for our products designed to be manufactured on an older process. We cannot assure you that any of our existing or new foundries will be able to produce integrated circuits with acceptable manufacturing yields, or that our foundries will be able to deliver enough semiconductor devices to us on a timely basis, or at reasonable prices. These and other related factors could impair our ability to meet our customers' needs and have a material and adverse effect on our operating results.

Although we may utilize new foundries for other products in the future, in using new foundries we will be subject to all of the risks described in the foregoing paragraphs with respect to our current foundries.

Our target markets are characterized by rapid technological change. The Semiconductor and Storage Systems segments in which we conduct business are characterized by rapid technological change, short product cycles and evolving industry standards. We believe our future success depends, in part, on our ability to improve on existing technologies and to develop and implement new ones in order to continue to reduce semiconductor chip size and improve product performance and manufacturing yields. We must also be able to adopt and implement emerging industry standards in a timely manner and to adapt products and processes to technological changes. If we are not able to implement new process technologies successfully or to achieve volume production of new products at acceptable yields, our operating results and financial condition may be adversely impacted.

We operate in highly competitive markets. Our competitors include many large domestic and foreign companies that have substantially greater financial, technical and management resources than we do. Several major diversified electronics companies offer custom solutions and/or other standard products that are competitive with our product lines. Other competitors are specialized, rapidly growing companies that sell products into the same markets that we target. Some of our large customers may also design and manufacture products that compete with our products. There is no assurance that the price and performance of our products will be superior relative to the products of our competitors. As a result, we may experience a loss of competitive position that could result in lower prices, fewer customer orders, reduced revenues, reduced gross profit margins and loss of market share.

We are dependent on a limited number of customers. A limited number of customers account for a substantial portion of our revenues. International Business Machines Corporation and Seagate Technology represented approximately 18% and 12%, respectively, of our total consolidated revenues for the three months ended July 2, 2006.

Our operating results and financial condition could be significantly affected if:

we do not win new product designs from major existing customers;

major customers reduce or cancel their existing business with us;

major customers make significant changes in scheduled deliveries; or

there are declines in the prices of products that we sell to these customers.

Table of Contents

We are potentially subject to credit risk from accounts receivable. A majority of the our trade receivables are derived from sales to large multinational computer, communication, networking, storage and consumer electronics manufacturers, with the remainder distributed across other industries. We perform ongoing credit evaluations of our customers financial condition and require collateral when considered necessary. However, we cannot provide assurance that our accounts receivable balances will be paid on time or at all. Silicon Graphics, a customer of ours, bankruptcy protection under Chapter 11 of the United States Bankruptcy Code on May 8, 2006. As a result of this action, we recorded \$1.3 million and \$6.9 million charges for the three and six months ended July 2, 2006 because we do not believe the receivable balance as of July 2, 2006 is collectible. The majority of the charges for the three and six months ended July 2, 2006 related to the Storage Systems segment.

Our new products may not achieve market acceptance. We introduce many new products each year. We must continue to develop and introduce new products that compete effectively on the basis of price and performance and that satisfy customer requirements. Our cores and standard products are intended to be based upon industry standard functions, interfaces, and protocols so that they are useful in a wide variety of systems applications. Development of new products and cores often requires long-term forecasting of market trends, development and implementation of new or changing technologies and a substantial capital commitment. We cannot provide assurance that the cores or standard products that we select for investment of our financial and engineering resources will be developed or acquired in a timely manner or will enjoy market acceptance.

The storage manufacturing facility we operate is complex. We own our own Storage Systems segment manufacturing facility in Wichita, Kansas. The manufacture and introduction of our Storage Systems products is a complicated process. We confront challenges in the manufacturing process that require us to:

maintain a competitive manufacturing cost structure;

exercise stringent quality control measures to ensure high yields;

effectively manage the subcontractors engaged in the wafer fabrication, test and assembly of products; and

update equipment and facilities as required for leading edge production capabilities.

We procure parts and raw materials from a limited number of domestic and foreign sources. We do not maintain an extensive inventory of parts and materials for manufacturing. We purchase a portion of our requirements for parts and raw materials from a limited number of sources, primarily from suppliers in Japan and their U.S. subsidiaries, and we obtain other material inputs on a local basis. There is no assurance that, if we have difficulty in obtaining parts or materials in the future, alternative suppliers will be available, or that these suppliers will provide parts and materials in a timely manner or on favorable terms. As a result, we may be adversely affected by delays in product shipments. If we cannot obtain adequate materials for manufacture of our products or if such materials are not available at reasonable prices, there could be a material adverse impact on our operating results and financial condition.

We utilize indirect channels of distribution over which we have limited control. Our financial results could be adversely affected if our relationship with resellers or distributors were to deteriorate or if the financial condition of these resellers or distributors were to decline. In addition, as our business grows, we may have an increased reliance on indirect channels of distribution. There can be no assurance that we will be successful in maintaining or expanding these indirect channels of distribution. Failure to do so could result in the loss of certain sales opportunities. Furthermore, the partial reliance on indirect channels of distribution may reduce our visibility with respect to future business, thereby making it more difficult to accurately forecast orders.

We engage in acquisitions and alliances giving rise to financial and technological risks. We are continually exploring strategic acquisitions that build upon our existing library of intellectual property, human capital and engineering talent, and increase our leadership position in the markets where we operate. We did not complete any material acquisitions or alliances for the three months ended July 2, 2006. Mergers and acquisitions of high-technology companies bear inherent risks. No assurance can be given that our previous or future acquisitions will be successful and will not materially adversely affect our business, operating results or financial condition. We must continue to manage any growth effectively. Failure to manage growth effectively and to integrate acquisitions could adversely affect our operating results and financial condition.

In addition, we intend to continue to make investments in companies, products and technologies through strategic alliances. Investment activities often involve risks, including the need to acquire timely access to needed capital for investments related to alliances and to invest in companies and technologies that contribute to the growth of our business.

Table of Contents

During the three months ended July 2, 2006, we completed the sale of the Gresham, Oregon manufacturing facility as part of our strategy to transition to a fabless semiconductor manufacturing model. Our new strategy includes the expansion of our working relationships with major foundry partners and the adoption of a roadmap leading to the production of advanced semiconductors utilizing 65-nanometer and below process technology on 300-mm or 12-inch wafers. As a result of this transaction, we are completely dependent on foundry subcontractors for the manufacture of our semiconductor products. In conjunction with the sale of the facility, we entered into other agreements with ON Semiconductor, including, but not limited to a wafer supply and test agreement and an intellectual property license agreement.

The price of our securities may be subject to wide fluctuations. Our stock has experienced substantial price volatility, particularly as a result of quarterly variations in results, the published expectations of analysts and announcements by our competitors and us. In addition, the stock market has experienced price and volume fluctuations that have affected the market price of many technology companies and that have often been unrelated to the operating performance of such companies. The price of our securities may also be affected by general global, economic and market conditions. While we cannot predict the individual effect that these and other factors may have on the price of our securities, these factors, either individually or in the aggregate, could result in significant variations in stock price during any given period of time. These fluctuations in our stock price also impact the price of our outstanding convertible securities and the likelihood of the convertible securities being converted into cash or equity. If our stock price is below the conversion price of our convertible bonds on the date of maturity, they may not convert into equity and we may be required to redeem our outstanding convertible securities for cash. However, in the event they do not convert to equity, we believe that our current cash position and expected future operating cash flows will be adequate to meet these obligations as they mature.

We may rely on capital and bank markets to provide liquidity. In order to finance strategic acquisitions, capital assets needed in our manufacturing facilities and other general corporate needs, we may rely on capital and bank markets to provide liquidity. As of July 2, 2006, we had convertible notes outstanding of approximately \$622 million. We may need to seek additional equity or debt financing from time to time. Historically, we have been able to access capital and bank markets, but we may not be able to access these markets in the future or on terms that are acceptable to us. The availability of capital in these markets is affected by several factors, including geopolitical risk, the interest rate environment and the condition of the economy as a whole. Moreover, any future equity or equity-linked financing may dilute the equity ownership of existing shareholders. In addition, our own operating performance, capital structure and expected future performance impact our ability to raise capital. We believe that our current cash, cash equivalents, short-term investments and future cash provided by operations will be sufficient to fund our needs in the foreseeable future. This includes repaying our existing convertible debt when due. However, if our operating performance falls below expectations, we may need additional funds.

We design and develop highly complex semiconductors and storage systems. As technology advances to smaller geometries, there are increases in the complexity, time and expense associated with the design, development and manufacture of semiconductors. We must incur substantial research and development costs to confirm the technical feasibility and commercial viability of any products that in the end may not be successful. Therefore, we cannot guarantee that any new semiconductor or storage products will result in market acceptance.

The high technology industry in which we operate is prone to intellectual property litigation. Our success is dependent in part on our technology and other proprietary rights, and we believe that there is value in the protection afforded by our patents, copyright, trademarks and other intellectual property rights. We have a program whereby we actively protect our intellectual property by acquiring patent and other intellectual property rights. However, the industry is characterized by rapidly changing technology and our future success depends primarily on the technical competence and creative skills of our personnel.

As is typical in the high technology industry, from time to time we have received communications from other parties asserting that certain of our products, processes, technologies or information infringe upon their patent rights, copyrights, trademark or other intellectual property rights. We regularly evaluate such assertions. In light of industry practice, we believe, with respect to existing or future claims that any licenses or other rights that may be necessary may generally be obtained on commercially reasonable terms. Nevertheless, there is no assurance that licenses will be

obtainable on acceptable terms or that a claim will not result in litigation or other administrative proceedings. Resolution of whether our product or intellectual property has infringed on valid rights held by others could have a material adverse effect on our results of operations or financial position and may require material changes in production processes and products.

See Legal Matters in Note 11 of the Notes regarding pending patent litigation.

Table of Contents

We may not be able to adequately protect or enforce our intellectual property rights, which could harm our competitive position. Our success and future revenue growth will depend, in part, on our ability to protect our intellectual property. We primarily rely on patent, copyright, trademark and trade secret laws, as well as nondisclosure agreements and other methods, to protect our proprietary technologies and processes. Despite our efforts to protect our proprietary technologies and processes, it is possible that competitors or other unauthorized third parties may obtain, copy, use or disclose our technologies and processes. We currently hold more than 3,500 U.S. patents. However, we cannot assure you that any additional patents will be issued. Even if a new patent is issued, the claims allowed may not be sufficiently broad to protect our technology. In addition, any of our existing or future patents may be challenged, invalidated or circumvented. As such, any rights granted under these patents may not provide us with meaningful protection. We may not have foreign patents or pending applications corresponding to our U.S. patents and applications. Even if foreign patents are granted, effective enforcement in foreign countries may not be available. If our patents do not adequately protect our technology, our competitors may be able to offer products similar to ours. Our competitors may also be able to develop similar technology independently or design around our patents. Some or all of our patents have in the past been licensed and likely will in the future be licensed to certain of our competitors through cross-license agreements.

Certain of our software (as well as that of our customers) may be derived from so-called open source software that is generally made available to the public by its authors and/or other third parties. Such open source software is often made available to us under licenses, such as the GNU General Public License. These licenses impose certain obligations on us in the event we were to distribute derivative works of the open source software. These obligations may require us to make source code for the derivative works available to the public, and/or license such derivative works under a particular type of license, rather than the forms of license customarily used to protect our intellectual property. While we believe we have complied with our obligations under the various applicable licenses for open source software, in the event the copyright holder of any open source software were to successfully establish in court that we had not complied with the terms of a license for a particular work, we could be required to release the source code of that work to the public and/or stop distribution of that work. With respect to our proprietary software, we generally license such software under terms that prohibit combining it with open source software as described above. Despite these restrictions, parties may combine our proprietary software with open source software without our authorization, in which case we may nonetheless be required to release the source code of our proprietary software.

Our Storage Systems manufacturing facility is subject to disruption. Operations at the Wichita, Kansas manufacturing facility may be disrupted for reasons beyond our control, including work stoppages, fire, earthquake, tornado, floods or other natural disasters, which could have a material adverse effect on our results of operation or financial position.

We depend on third-party subcontractors to assemble, obtain packaging materials for, and test substantially all of our current semiconductor products. If we lose the services of any of our subcontractors or if these subcontractors are unable to obtain sufficient packaging materials, shipments of our products may be disrupted, which could harm our customer relationships and adversely affect our revenues. Third-party subcontractors located in Asia assemble, obtain packaging materials for, and test substantially all of our current semiconductor products. Because we rely on third-party subcontractors to perform these functions, we cannot directly control our product delivery schedules and quality assurance. This lack of control has resulted in the past, and could result in the future, in product shortages or quality assurance problems that could delay shipments of our products or increase our manufacturing, assembly or testing costs.

If our third-party subcontractors are unable to obtain sufficient packaging materials for our products in a timely manner, we may experience a significant product shortage or delay in product shipments, which could seriously harm our customer relationships and materially and adversely affect our net revenues. If any of these subcontractors experiences capacity constraints or financial difficulties, suffers any damage to its facilities, experiences power outages or any other disruption of assembly or testing capacity, we may not be able to obtain alternative assembly and testing services in a timely manner. Due to the amount of time that it usually takes us to qualify assemblers and testers, we could experience significant delays in product shipments if we are required to find alternative assemblers or testers for our components. Any problems that we may encounter with the delivery, quality or cost of our products

could damage our customer relationships and materially and adversely affect our results of operations. We are continuing to develop relationships with additional third-party subcontractors to assemble and test our products. However, even if we use these new subcontractors, we will continue to be subject to all of the risks described above.

We depend on third-party subcontractors to manufacture all of our current board products. Third-party subcontractors manufacture all of our current board products. Because we rely on third-party subcontractors to perform this function, we cannot directly control our product delivery schedules and quality assurance. This lack of control has resulted in the past, and could result in the future, in product shortages or quality assurance problems that could delay shipments of our products or increase our manufacturing, assembly or testing costs.

Table of Contents

If our third-party subcontractors are unable to manufacture our products in a timely manner, we may experience a significant product shortage or delay in product shipments, which could seriously harm our customer relationships and materially and adversely affect our net sales. If any of these subcontractors experiences capacity constraints or financial difficulties, suffers any damage to its facilities, experiences power outages or encounters any other disruption of manufacturing capacity, we may not be able to obtain alternative manufacturing services in a timely manner. Due to the amount of time that it usually takes us to qualify such third party manufacturers, we could experience significant delays in product shipments if we are required to find alternatives. Any problems that we may encounter with the delivery, quality or cost of our products could damage our customer relationships and materially and adversely affect our results of operations. We are continuing to develop relationships with additional third-party manufacturers for our products. However, even if we use these new subcontractors, we will continue to be subject to all of the risks described above.

We are increasingly exposed to various legal, business, political and economic risks associated with our international operations. We currently obtain a substantial portion of our manufacturing, and all of our assembly and testing services from suppliers located outside the United States. We also frequently ship products to our domestic customers' international manufacturing divisions and subcontractors. We also undertake design and development activities in Canada, China, Dubai, Germany, India, Italy, Russia, Taiwan, and the United Kingdom. We intend to continue to expand our international business activities and to open other design and operational centers abroad. Any geopolitical factors such as terrorist activities, armed conflict or global health conditions, which adversely affect the global economy, may adversely impact our international sales and could make our international operations more expensive. International operations are subject to many other inherent risks, including but not limited to:

political, social and economic instability;

exposure to different legal standards, particularly with respect to intellectual property;

natural disasters and public health emergencies;

nationalization of business and blocking of cash flows;

trade and travel restrictions;

the imposition of governmental controls and restrictions;

burdens of complying with a variety of foreign laws;

import and export license requirements and restrictions of the United States and each other country in which we operate;

unexpected changes in regulatory requirements;

foreign technical standards;

changes in tariffs;

difficulties in staffing and managing international operations;

fluctuations in currency exchange rates;

difficulties in collecting receivables from foreign entities or delayed revenue recognition; and

potentially adverse tax consequences.

Any of the factors described above may have a material adverse effect on our ability to increase or maintain our foreign sales.

We are exposed to fluctuations in foreign currency exchange rates. We have some exposure to fluctuations in foreign currency exchange rates. We have international subsidiaries and distributors that operate and sell our products globally. We routinely hedge these exposures in an effort to minimize the impact of currency fluctuations. However, we may still be adversely affected by changes in foreign currency exchange rates or declining economic conditions in these countries.

Table of Contents

We must attract and retain key employees in a highly competitive environment. Our employees are vital to our success and our key management, engineering and other employees are difficult to replace. We do not generally have employment contracts with our key employees. Despite the economic slowdown of the last few years, competition for certain key technical and engineering personnel remains intense. Our continued growth and future operating results will depend upon our ability to attract, hire and retain significant numbers of qualified employees.

The adoption of new accounting standards related to the expensing of stock awards adversely affected our results for the six months ended July 2, 2006 and is expected to negatively impact the results of operations in subsequent periods. Future changes in financial accounting standards or practices or existing taxation rules or practices may also cause adverse unexpected fluctuations and affect our reported results of operations. On January 1, 2006, we adopted SFAS 123R. In accordance with the modified prospective transition method, we began recognizing compensation expense for all share-based awards on or granted after January 1, 2006, plus unvested awards granted prior to January 1, 2006. Under this method of implementation, no restatement of prior periods has been made. The adoption of SFAS 123R has a significant impact on our operating results as share-based compensation expense is charged directly against reported earnings. Numerous judgments and estimates are involved in the calculation of the expense and the changes to those estimates, or different judgments could result in a significant impact on the financial statement.

Financial accounting standards in the United States are constantly under review and may be changed from time to time. Once implemented, these changes could result in material fluctuations in our financial results of operations and/or the way in which such results of operations are reported. Similarly, we are subject to taxation in the United States and a number of foreign jurisdictions. Rates of taxation, definitions of income, exclusions from income, and other tax policies are subject to change over time. Changes in tax laws in a jurisdiction in which we have reporting obligations could have a material impact on our results of operations.

We face uncertainties related to the effectiveness of internal controls. Public companies in the United States are required to review their internal controls over financial reporting under Section 404 of the Sarbanes-Oxley Act of 2002. It should be noted that any system of controls, however well designed and operated, can provide only reasonable, and not absolute, assurance that the objectives of the system are met. In addition, the design of any control system is based in part upon certain assumptions about the likelihood of future events. Because of these and other inherent limitations of control systems, there can be no assurance that any design will achieve its stated goal under all potential future conditions, regardless of how remote.

Although our management has determined, that our disclosure controls and procedures were effective as of July 2, 2006, we cannot assure you that we or our independent registered public accounting firm will not identify a material weakness in our internal controls in the future. A material weakness in our internal controls over financial reporting would require management and our independent public accounting firm to evaluate our internal controls as ineffective. If our internal controls over financial reporting are not considered adequate, we may experience a loss of public confidence, which could have an adverse effect on our business and our stock price.

Internal control deficiencies or weaknesses that are not yet identified could emerge. Over time we may identify and correct deficiencies or weaknesses in our internal controls and, where and when appropriate, report on the identification and correction of these deficiencies or weaknesses. However, the internal control procedures can provide only reasonable, and not absolute, assurance that deficiencies or weaknesses are identified. Deficiencies or weaknesses that are not yet identified could emerge and the identification and corrections of these deficiencies or weaknesses could have a material impact on the results of operations for us.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

On July 28, 2000, our Board of Directors authorized a new stock repurchase program in which up to 5 million shares of the our common stock may be repurchased in the open market from time to time. There is no expiration date for the plan. There are 3.5 million shares available for repurchase under this plan as of July 2, 2006. We did not repurchase any shares during the three months ended July 2, 2006.

Table of Contents**Item 4. Submission of Matters to a Vote of Security Holder.**

The annual meeting of stockholders was held on May 11, 2006 in San Jose, California. At the meeting, the stockholders voted on and approved the following proposals. The results of voting were as follows:

Proposal 1. To elect seven directors to serve for the ensuing year and until their successors are elected.

Director	Votes For	Votes Withheld
T.Z. Chu	333,599,121	8,508,438
Malcolm R. Currie	325,899,296	16,208,263
James H. Keyes	328,630,524	13,477,035
R. Douglas Norby	310,768,266	31,339,293
Matthew J. O'Rourke	328,787,067	13,320,492
Gregorio Reyes	330,371,492	11,736,067
Abhijit Y. Talwalkar	335,204,217	6,903,342

Proposal 2. To approve an amendment to the Company's Employee Stock Purchase Plan to increase the number of shares of common stock reserved for issuance thereunder by 9,000,000.

Votes For	Votes Against	Abstentions	Broker Non-Votes
210,657,061	19,378,803	2,766,824	109,304,871

Proposal 3. To approve an amendment to the Company's International Employee Stock Purchase Plan to increase the number of shares of common stock reserved for issuance thereunder by 1,000,000.

Votes For	Votes Against	Abstentions	Broker Non-Votes
210,551,743	19,423,440	2,827,506	109,304,870

Proposal 4. To ratify the appointment of PricewaterhouseCoopers LLP as the independent registered public accounting firm of the Company for its 2006 fiscal year.

Votes For	Votes Against	Abstentions	Broker Non-Votes
333,316,584	6,309,584	2,481,391	

Item 5. Other Matters

On May 23, 2005, Wilfred J. Corrigan's status as an employee of the Company ceased. On June 13, 2005, the Company entered into a letter agreement (the "Letter Agreement") with Mr. Corrigan summarizing the payments and benefits Mr. Corrigan would receive in accordance with his employment agreement dated September 20, 2001, and as disclosed in the Company's Quarterly Report on Form 10-Q for the quarter ended July 3, 2005. In the Form 10-Q for the quarter ended July 3, 2005, we previously disclosed that Mr. Corrigan's total payments would amount to \$5.3 million in the aggregate. In addition to the payments and benefits provided for in

Table of Contents

the employment agreement, pursuant to the Letter Agreement and a plan adopted on May 4, 2000 by the LSI Logic Board of Directors, the medical benefits for Mr. Corrigan's dependent child would continue after the expiration of Mr. Corrigan's health, dental and vision benefits, until she reaches age 65.

Item 6. Exhibits

10.55 Wafer Supply and Test Services Agreement between LSI Logic Corporation and Semiconductor Components Industries, LLC, as of May 16, 2006. Incorporated by reference to exhibit filed with the Quarterly Report on Form 10-Q on April 27, 2006 by ON Semiconductor Corporation.+

10.56 Letter Agreement dated June 13, 2005 between LSI Logic Corporation and Wilfred J. Corrigan.

31.1 Certification of the Chief Executive Officer pursuant to Securities and Exchange Act Rules 13a-15(e) and 15d-1(e), as adopted pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.

31.2 Certification of the Chief Financial Officer pursuant to Securities Exchange Act Rules 13a-15(e) and 15d-1(e), as adopted pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.

32.1 Certification of Chief Executive Officer pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.**

32.2 Certification of Chief Financial Officer pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.**

+ Schedules to this exhibit not filed herewith shall be furnished to the SEC upon request. Portions of this exhibit have been omitted pursuant to a request for confidential treatment.

** Furnished not filed.
