Sierra Wireless launches industry-leading LTE-Advanced multi-network platform for first responders, field services and transit

AirLink® MG90 ensures secure, always-on, high performance mobile connectivity for mission-critical applications

VANCOUVER, British Columbia--(BUSINESS WIRE)--October 4, 2016--Sierra Wireless (NASDAQ:SWIR) (TSX:SW), a leading provider of fully integrated end-to-end solutions for Internet of Things (IoT) applications, today announced the availability of the AirLink® MG90, a high performance LTE-Advanced vehicle networking platform that provides secure, always-on mobile connectivity. The MG90 builds on the success of the oMG Mobile Gateway, which is the world's most widely deployed multi-network solution for mission-critical first responder, field service and transit applications.

“Sierra Wireless is the market leader in volume shipments of cellular gateways and routers, with a large installed base of high-speed mobile gateways for first responders in the North American market,” said Sam Lucero, Senior Principal Analyst for IoT at IHS Markit. “Platforms like the MG90, with its focus on multi-network switching capability, are addressing a key customer need for robust, highly-available connectivity technology options.*”

Today's mobile workforce needs to connect more technology in and around their vehicles than ever before, and these devices need to remain securely connected at all times, even as the vehicle moves from one coverage area to another. The MG90 provides:

- The world's fastest vehicle area network to support multiple high-bandwidth applications working simultaneously
- Guaranteed, “always-on” connectivity with sub-second switching of multiple simultaneous integrated WAN links, including:
 - ◆ Dual-LTE-Advanced
 - ◆ FirstNet Band 14 option
 - ◆ Gigabit Wi-Fi WAN
 - ◆ Gigabit Ethernet
 - ◆ Extensions to satellite and Land Mobile Radio (LMR)
- Connected vehicle awareness with built-in vehicle-ready I/O, Bluetooth and Vehicle Telemetry interface for in-depth visibility of engine health and remote monitoring of axillary devices, such as light bars, sirens and gun racks
- Mobile multi-network security using the AirLink Connection Manager (ACM) to retain static IP addresses across all wide area networks without interruption, consolidating the security for all technologies connected to the vehicle area network
- Advanced network management software using the AirLink Mobility Manager (AMM) for instant network insight and control, enabling centralized and remote management, monitoring and configuration, available as a hosted service or in the enterprise

“First responder, transit, and field service fleets increasingly require multiple wireless networks to ensure always-on, secure communications in the field,” said Jason Krause, Senior Vice President and General Manager, Enterprise Solutions for Sierra Wireless. “The AirLink MG90 platform is designed to meet the demands of fleets today and in the future, enabling more informed and better equipped mobile workforces, by providing guaranteed connectivity for mission critical applications.”

The MG90's multi-networking capability is optimized for the world's most demanding wireless applications, such as in law enforcement vehicles, which host multiple systems (body worn cameras, laptops, electronic citation systems, live digital video surveillance and automated license plate recognition systems) that all need to remain securely connected as the vehicle travels.

Josh Hearen, Deputy Sheriff, Brazos County Sheriff's Office, said: "Since we deployed the new AirLink MG90 in our test vehicle, we've been particularly impressed with its ability to connect to our two core networks—Verizon and FirstNet Band 14—at any one time. Because it switches between both networks so quickly, the transition is invisible, resulting in almost no network downtime. When connected to the MG90, our officers are able to complete all of their research, paperwork and reporting remotely from the vehicle via their laptops, increasing productivity and saving the department, and taxpayers, money and superfluous man hours."

Felix Arenas, IT Analyst, Town of Paradise Valley, said: "For us, the biggest benefit of the AirLink MG90 is reliability—it just works. It provides a constant and secure connection wherever it's located. The MG90 has allowed us to connect more in-vehicle applications than ever before. All the data is secure, so our officers are able to transmit sensitive information from their vehicles."

George Barlow Brown, Communications & IT Chief, New Orleans Office of Homeland Security and Emergency Preparedness, said: "One of the main reasons we chose the AirLink MG90 is because it's FirstNet, Band 14 deployable. When the network is turned on, we won't need to purchase new technology, saving considerable costs and time. We've also been very impressed by the MG90's performance on our current Verizon network. It's enabled us to be more informed, respond faster and be better equipped to manage an emergency."

About the AirLink MG90 LTE-A Multi-networking Platform

Together with the AirLink Connection Manager, the MG90 consolidates the security for all connected technologies in the vehicle area network, simplifying deployment and enabling the enterprise to retain management control over network access and connected mobile assets.

The MG90 integrates with the AirLink Mobility Manager—an end-to-end network management solution—to enable simplified, remote and real-time insight and control of connected mobile assets and mission critical applications, and supports vehicle tracking, telemetry and asset management applications.

About Sierra Wireless

Sierra Wireless (NASDAQ: SWIR) (TSX: SW) is building the Internet of Things with intelligent wireless solutions that empower organizations to innovate in the connected world. We offer the industry's most comprehensive portfolio of 2G, 3G and 4G embedded modules and gateways, seamlessly integrated with our secure cloud and connectivity services. OEMs and enterprises worldwide trust our innovative solutions to get their connected products and services to market faster. Sierra Wireless has more than 1,000 employees globally and operates R&D centers in North America, Europe and Asia. For more information, visit www.sierrawireless.com.

Forward Looking Statements

This press release contains forward-looking statements that involve risks and uncertainties. These forward-looking statements relate to, among other things, plans and timing for the introduction or enhancement of our services and products, statements about future market conditions, supply conditions, channel and end customer demand conditions, revenues, gross margins, operating expenses, profits, and other expectations, intentions, and plans contained in this press release that are not historical fact. Our expectations regarding future revenues and earnings depend in part upon our ability to successfully develop, manufacture, and supply products that we do not produce today and that meet defined specifications. When used in this press release, the words "plan", "expect", "believe", and similar expressions generally identify forward-looking statements. These statements reflect our current expectations. They are subject to a number of risks and uncertainties, including, but not limited to, changes in technology and changes in the wireless data communications market. In light of the many risks and uncertainties surrounding the wireless data communications market, you should understand that we cannot assure you that the forward-looking statements contained in this press release will be realized.
