Edgar Filing: HEWLETT PACKARD CO - Form DFAN14A

- 1 Based on assumptions similar to management's outlined on page 30 of HP Position on Compaq Merger, 12/19/01. Present values, except for core dilution and cost to achieve savings, calculated as of February 19, 2002 based on a 20x forward price-earnings multiple applied to net earnings impact in calendar year 2004. Assumes 26% marginal tax rate
- 2 Assumes net pre-tax cost savings in calendar year 2004 of \$2.0 billion based on \$2.5 billion in cost savings and \$0.5 billion in lost profit on lost revenues. Lost profit calculation assumes \$84.0 billion in revenue in calendar year 2004 before revenue losses, 4.9% revenue loss, 12% contribution margin.
- 3 Represents the value of the core dilution of the transaction before the realization of cost savings at HP's current 2002 calendar year price-earnings multiple of 17.7x. Calendar 2002 pro forma earnings before cost savings calculated based on First Call consensus earnings estimates of \$1.11 and \$1.35 for HP for fiscal years 2002 and 2003, respectively, and \$0.27 for Compaq for its fiscal 2002. Under management's present value methodology, the core dilution has a value of \$3.56 per share based on calendar 2004 earnings estimates.
- 4 Realistic case based on \$1.3 billion restructuring charge established in connection with Compaq's acquisition of DEC in 1998, which also involved approximately 15,000 layoffs, and the \$635 million in retention bonuses announced by management in the proposed HP/Compaq merger. In fiscal 2001, HP took a \$384MM charge for a restructuring it estimated would result in annual cost savings of approximately \$500MM. Downside case based on 50% premium to realistic case (11.4% of transaction value). Compaq/DEC restructuring charge as a percentage of transaction value was 13.5%. Excludes the impact of new employment agreements with Ms. Fiorina and Mr. Capellas. Assumes cash is paid out ratably over the first six months following closing
- 5 Realistic case based on BofA, Hewlett-Packard: Management Turns up the Heat, 12/19/01 base case of 87.8% of management estimate realized in 2003 (\$1.8 billion assumed vs. management estimates of \$2.1 billion). Downside based on BofA downside case 75.6% of management estimate realized in 2003 (\$1.6 billion assumed vs. management estimates of \$2.1 billion)
- 6 Realistic case based on historical experience of tech companies, revenue loss in services, and higher fixed cost assumptions post planned cost synergies. See analysis presented on p. 21-26. Downside case based on discount to Compaq/DEC transaction.
- 7 Realistic case assumption based on historical experience of tech companies, revenue loss in services. Downside case based on discount to McKinsey computer company example (see Revenue Loss Benchmarks on p. 12)

- 1 Based on First Call estimates as of August 31, 2001
- 2 Based on First Call estimates as of February 15, 2002
